Unquestionably the best way to obtain this knowledge is by a course of study in a good college. The best colleges of pharmacy in this country are now advertising laboratory work in all of the three directions indicated above as comprising the science of botany, though, of course, these schools give, as they should, a pharmaceutical bearing to all the work. A student cannot learn to identify crude plant material and to analyze foods in any college by taking in the laboratory two to four hours a week for half a year. Any school that professes to give students structural and systematic botany and the determination microscopically of adulterations in such a limited period should be looked upon with suspicion.

But there are many young men who, unfortunately, are unable to enjoy the privileges of a college course, but who, nevertheless, wish to know something about the uses of botany in pharmacy, and who would be grateful, no doubt, if they could be told how to proceed to gain something of the outlook and insight which their more fortunate fellows obtain from skilled instruction. To such persons it may be said for their comfort that, as in other professions in life, so in pharmacy, the college may not fulfill the measure of success of the hard-working, self-taught student. The college furnishes an opportunity for a man with ability and energy to acquire what he will with greater ease and in shorter time than he could by himself. The college does not furnish brains nor compel a student to learn against his will. Other things being

equal, the college man will excel the non-college man.

The man, however, who would study botany by himself, or with such aid as some friend may give him, can, in time, with patience and perseverance, accomplish much in some directions. The mere ability to name plants by the use of an artificial key is not a very great task, neither is it a scientific study. But the learner, if he is wise, will leave the classification of plants till he has made some progress in the study of structural botany. For this latter study there are two methods, not equally good, which might be pursued. By the first method, the student would begin with the study of medicinal or food material, with cinchona bark or mustard, for instance. He would learn the structure of these preparations and their histology, and then take up another, learning each for itself and by itself, till he had gone over the more common crude materials and food preparations. But there are two reasons why this would not be a good plan for study. In the first place, it requires more time than the other method, and, in the second place, it gives one mere fragments of knowledge, not the knowledge that is power. By way of illustration, it might be asked whether any one would think of learning chemistry by a similar method. Does one study chemistry by taking up chemical substances one by one? Does he not rather group those substances and study the interrelations of the members of a group, and thus arrive at principles and laws that give him knowledge that is power? And so, also, it is in the study of botany. Even for pharmaceutical botany one should begin with the study of groups of objects. Better, then, than the study of mustard as mustard, and of wheat, flour and coffee, each by itself, would be the study of seeds, to see what they have in common in structure and contents. The best point, provided one has the facilities, at which to make the very beginning of botanical study, is undoubtedly with the cell; not with the mustard cell nor with the coffee cell, but with the whole group of cells, to see what they have in common, and how they differ from one another. The practical utility of such a method will be apparent, also, when it is stated that in examining powder of unknown composition one can often decide its source, as from root to stem, leaf or fruit, though he may never have seen the particular plant from which the material came. In this way one receives a hint that will often greatly lighten his labor.

With these preliminary remarks, an attempt may now be made to outline a course of study in botany, which course, it is believed, is in accordance with the method that will give in the end the best results. It must be remembered, however, that by this or any other method difficulties will arise that, without the aid of an instructor, will render great proficiency difficult, if not impossible, in many cases.

The order of study recommended is the following:

1. Structural and physiological botany combined.
2. Systematic botany.
3. The study of articles of trade.

These three departments of the subject will now be taken up briefly and in greater detail, and proper helps suggested.

The first thing that one who wishes to work by himself must obtain is a proper manual to direct his study. Such books are not numerous, though the number of manuals on particular parts of botany is great enough. There has recently appeared from the publishing house of D. C. Heath & Co. an admirable little book by Professor Spalding of the University of Michigan, which is just what the beginner needs. This book tells the student what equipment to purchase and how to prosecute his study, while it presents to him, by the laboratory method, both the structure and the physiology of plants. In addition to Professor Spalding's little book, "Guide to the Study of Common Plants," the student should procure Strasburger & Hillhouse's "Practical Botany," published by Macmillan & Co. This book has not arranged its material in such good order as the former one, but it contains many details especially interesting to the pharmacist which Professor Spalding's book omits. A third manual recommended is Flueckiger & Tschirch's "Principles of Pharmacognosy," by W. Wood & Co. There is no need here of advising the student what apparatus or tools to procure, since the first two manuals named give explicit and reliable directions for this purpose.

A fourth book which the student would find useful in explaining the physiological processes is Goodale's "Physiological Botany," published by Ivison, Blakeman & Co.

When several months have been spent in studying the structure and physiology of plants by the aid of the books named above, the classification of plants may be taken up and carried on with the continued study of structure. For the study of classification there is no better manual than the new edition of Gray. The learner would better obtain both the "Lessons" and "Manual." They may be purchased separate or in one binding. Should the reader reside in Southern United States or in the Rocky Mountain region, he would need, instead of Gray's Manual, either Chapman's "Flora of the Southern United States," or Coulter's "Manual of the Botany of the Rocky Mountain region."

When one's study has gone so far that he knows how roots, stems, leaves, flowers, seeds and fruits are constructed; has learned the marks by which he can identify the different kinds of tissues and cells, can identify, for instance, collenchyma, bast fibres, tracheids, spiral vessels, etc.; when he has learned also the means of identifying starch grains, protein granules and other cell contents, both optically and microscopically, then he is ready to begin the investigation of medicinal and food preparations.

For this practical study manuals are needed as for the preliminary study. In English there is, unfortunately, no suitable manual that is up to date; the best is "Food, Its Adulterations, Etc.," by Hassall, but the book is old, with many mistakes in text and figures. In German there are two hand books that can be

especially recommended for the examination of foods. They are Schimper's "Anleitung zur mikroskopischen Untersuchung der Nahrungs und Genussmittel," and Moeller's "Mikroskope der Nahrungs- und Genussmittel." Even though the reader understands but little German, he can get much out of these two books, especially from that by Schimper.

In all of this practical work, especially in examination for determining purity, there is one rule which is to be followed. Always study the structure of material known to be pure before examining the preparation whose purity is to be tested. It will in most cases be best and easiest to learn this structure from uninjured parts of plants rather than from preparations. For instance, if one is to test mustard, he should first become acquainted with the structure of mustard seed; then he can readily determine whether his sample on examination shows any other elements than he discovered in the seed, that is, whether it is adulterated. By such a method of procedure it will readily be seen that the analyst can examine for adulteration any new preparation that turns up. After he has learned the method of working, all he has to do, if anything new appears on the market, is to procure the plant organ from which the preparation is made, acquaint himself with its structure, and then test the preparation.

The foregoing directions have been given for the aid of those especially who have had no botany. Those who have had the part of the work given in most of our high schools by the study of Gray's or Wood's Lessons and Manual would do well to pursue the same course as indicated in the preceding paragraphs, except that they will not need so much time for the study of classification. Those persons who have thus had the systematic work would best procure Professor Spalding's Manual, together with Strasburger & Hillhouse's, or for these two books Flueckiger & Tschirch's may be substituted, though the material used for study in the last named is often difficult to procure, and therefore Professor Spalding's book would be the more convenient.

In closing, it might be of help to bring before the reader in concise form the limitations to his progress in the science of botany. He should understand, then, at the outset, that botany does not consist in the naming of plants, as many innocent people believe. He should understand that it cannot be "picked up" by one's self any more readily than chemistry can. The part that can be most readily acquired, and which all can acquire, is the systematic part, as given in Gray's "Lessons and Manual." With the microscopic structure of plants, one may also do a great deal by patience and perseverance. For the other departments of botany one would best limit himself to reading, until such time as he can have the assistance of competent instruction.

A CHINESE CHOLERA POWDER, exploited in Alsace-Lorraine, was found to contain arsenic and mercury, and its sale has been prohibited.

HYDRATED NITROUS OXIDE is $N_2O \cdot 6H_2O$.

[Written for The Era.]

PALATABLE CASTOR OIL.

By A. E. Hiss, Ph. G., Chicago, Ill.

Some time ago many American journals were reprinting a formula devised by N. Pretzker of this city for a palatable form for the administration of castor oil. His formula directs the use of one-half ounce of egg yolk, three and one-half ounces of castor oil, one and one-half ounce milk and two drops oil of bitter almonds. Upon trying this formula with No. 1 castor oil I failed to obtain a product in which the taste and the odor of the nauseous oil were disguised; in fact, the emulsion was almost as disagreeable as the plain oil. Upon further experimentation I found the following to be almost everything that could be desired, the taste and odor of the oil being entirely covered, the mixture proving almost as pleasant a drink as could be devised.

Castor oil.....	2½ fl. ounces
Egg yolk.....	½ fl. ounce
Syrup.....	¼ fl. ounce
Oil of cassia.....	20 drops

The egg yolk should be thoroughly beaten in an emulsion mortar, the two oils incorporated gradually until emulsified, finally adding the syrup. The volatile oil and the syrup with the emulsificant completely disguise the taste and odor of the castor oil. Such an emulsion contains 70 per cent. of the oil. In addition to assisting to disguise the taste, the cassia oil serves the further purpose of preventing griping. The amount indicated may not be sufficient for all individuals, and may be increased to thirty drops, or, perhaps, even more. The dose of such a mixture is from one-half to two ounces. It acts in most cases with exceeding rapidity, very often within less than an hour. It would, therefore, be an excellent cathartic in cases of poisoning, where, as is well known, briskness of action is required. No doubt, the fineness of division of the oil assists its cathartic action. No addition of milk is necessary to this mixture, though it may be advisable, in administering it to children, when they are not to know that a medicine is being given.

SPECIFIC GRAVITY OF OIL OF PEPPERMINT.—Schimmel's report gives these figures for the several varieties. For Mitcham, 0.905 to 0.910; German, 0.895 to 0.920; French, 0.920; American, 0.910 to 0.920; Japanese, 0.890 to 0.910.

ARGENTAMIN is a new Schering product. It is believed to be a highly effective antiseptic, and its preparation was the result of a prolonged study of the action of a large number of organic bodies on albumen and the allied compounds. The body is described as a solution of ethylene-diamine—silver phosphate.

GLUCOSE IN URINE.—Bizzari directs to saturate small strips of pure woolen cloth with a ten per cent. water solution of stannous chloride and dry them at a moderate heat. If then a few drops of the suspected sample be placed upon this prepared fabric and dried at a moderate heat, glucose produces a dark coloration, and by comparison of the color with the colors produced by solutions of glucose of known strength, an approximate idea of the amount of glucose present may be gained.

PHARMACY.

COLORING PRINCIPLE OF COCHINEAL.—Von Miller and Rhode have determined as a result of investigation that the statement that carminic acid is a glucoside which decomposes into glucose and carmine red is a false one. They assert that carmine red and carminic acid are identical. After boiling carminic acid for some hours with dilute sulphuric acid carminic acid and a strong reducing substance of unknown composition can be separated. The latter substance has no doubt been looked upon as a sugar. Formic acid is also produced in this decomposition.

ADMINISTERING TINCTURE OF IRON.—A correspondent of the American Therapist says he has employed for years with very satisfactory results the following method of administering tincture of chloride of iron: One-third or one-half of the white of an egg is well beaten up with a little water in a cup and a teaspoonful of 5 to 20 per cent. solution of the tincture of the chloride in water is added and thoroughly mixed, the whole then being drunk by the patient. No injurious effects upon the teeth are noticed, and patients find the taste not at all disagreeable.

DISTILLATION OF METALS.—Prof. Kohlbaum of the University of Basle has been conducting some very interesting experiments, and reports the result to La Nature, relating that by employing a very infusible glass and a perfect vacuum, he succeeded in obtaining, in a greater degree of purity than ever before known, the metals potassium, sodium, selenium, tellurium, bismuth and thallium. An interesting fact in connection with tellurium was that there disappeared from its spectrum no less than thirty-five lines heretofore considered characteristic of it, but now seen to be due only to impurities.

PHOTOGRAPHY FOR THE SKIN SPECIALIST.—German experimenters have been applying photography in the study of the skin, and the British Journal of Photography reports that by the aid of a small incandescent lamp and a metallic reflector they have succeeded in projecting on the epidermis a light so strong that by the use of very rapid plates all the details of the texture of the skin and such small markings as are ordinarily invisible or only occasionally present, are readily obtained. The positives are enlarged, the prints colored, with results of great interest and value to dermatologists.

SOME NEW SULPHONIC ESTERS.—Bayer & Co. (Eberfeld) have taken out patents for the preparation of several of these bodies. (Ph. Ztg.) The principle involved is the heating of an alkyl sulphonic chloride with an alkali and a phenol. The chief body treated of is the ethyl and guaiacol compound. Ethyl sulphonic chloride so treated with guaiacol and alkali yields the sulphonic compound of both radicals. This body is a transparent, somewhat unstable oil, boiling at 200 degrees with partial decomposition. The corresponding eugenol compound boils at 240 degrees. These bodies possess a strong physiological action, and are being introduced into medicine.

LYCETOL has as substitute names, lutepezine, dimethyl-piperazine and dipropylene-diamide.

CINCHONINE is one of several isomers of cinchonine, with which it has often been confounded. Jungfleisch and Leger (in *Compt rend.*) now give a detailed description of this base, from which we learn that its constitution is expressed by the formula $C_{19}H_{17}N_3O_2$. It crystallizes from hot alcohol in small, brilliant, colorless anhydrous needles, which are insoluble in water, ether or dilute alcohol. It is soluble in a mixture of chloroform and cold alcohol, but only slightly soluble in ether alone. The crystals melt at 273 degrees C., and volatilize unchanged. Dextro-rotatory, this property augmenting as the concentration of the alcoholic solution increases.

ELIXIR CALISAYA AND COCA.—Percolate 60 grains calisaya bark in No. 60 powder with a mixture of 1 dram oil orange, 10 minims oil lemon, 5 minims oil coriander, 4 fluid ounces alcohol, 10 minims hydrochloric acid, 3 fluid ounces glycerine and 3 fluid ounces water, adding alcohol and water in the same proportion, till 10 fluid ounces of percolate is obtained. To this add 2 fluid ounces of fluid extract of coca and sufficient syrup to make 16 fluid ounces. Then add a little Fuller's earth, shake well and filter, adding through the filter enough simple elixir to preserve the volume. Each teaspoonful equals 5 grains calisaya bark and $\frac{7}{16}$ grains coca leaves. (E. E. Fisher, Amer. Druglist.)

TINCTURE OF IODINE.—C. F. Henry, in a paper presented before the Edinburgh Chemists' Assistants' Association, speaks of the great variation in composition and strength of the tincture, as dispensed in various countries. He suggests a formula for a tincture which may be employed both externally and internally, taking the place of the present tincture (B. P.) and liniment: One and one-fourth ounce each of iodine and potassium iodide are allowed to dissolve in one-half fluid ounce water, then one-half fluid ounce of glycerine and enough alcohol to make 20 fluid ounces added. Such a tincture is suitable for both internal and external use, is miscible with water in all proportions, and its dose would range from 2 to 8 minims.

TO STERILIZE DRINKING WATER.—F. Watts, analyst to the government of the Leeward Islands, in a communication to the Chemical News, presents some results, not merely of interest, but of valuable service. The important statement, if it be authenticated, is made that micro-organisms are precipitated from hard water by the addition of ferric chloride, the supernatant water being absolutely sterile. Ferric chloride causes no precipitation in soft water; hence it is recommended that after its addition a little lime water or diluted solution of sodium carbonate be added; this causes the necessary precipitation. About 1 to $1\frac{1}{2}$ fluid ounces of solution of ferric chloride is sufficient to purify and sterilize 100 gallons of water. For ordinary use it is well to dilute it 1 to 10, and of this solution use a teaspoonful to the gallon of water.

ELIXIR CALISAYA DETANNATED.—E. E. Fisher contributes to American Druglist this process: Mix 600 grains of calisaya in No. 60 powder, with one ounce calcined lime; add three and one-half ounces water; stir well and let dry slowly. Percolate with a mixture of ten minims hydrochloric acid and alcohol, adding sufficient alcohol to bring the bulk up to four fl. ounces. To this add forty-five minims oil of orange, ten minims oil of lemon, five minims oil of coriander; shake thoroughly; add four drs. glycerine, seven fl. ounces syrup and enough water to make one pint. Finally add four drs. Fuller's earth, shake well and filter. Each teaspoonful represents five drs. of bark. The elixir is miscible with iron preparations.

GLYCERINE IN FLUID EXTRACTS.—O. Linde obtains fair results with a number of fluid extracts by evaporating 10 grams to half the quantity, dissolve the residue in 50 cc. of water and add solution of lead subacetate, drop by drop, to complete precipitation. The precipitate is allowed to settle, the liquid decanted through a wetted filter, to which the precipitate is later transferred and washed with water. The filtrate is then acidulated with a few drops of dilute sulphuric acid and solution of phosphotungstic acid added until precipitation ceases, when the mixture is filtered and washed as before. The filtrate is now made alkaline with dilute solution of sodium hydrate, evaporated to a syrupy consistence, 30 cc. of a mixture of absolute alcohol and ether added, filtered, and the insoluble matter washed with ether-alcohol. The ether-alcohol solution is evaporated in a wide flask having a long neck, and dried to a constant weight. The residue is almost pure glycerine, containing but very little coloring matter. Some extracts contain constituents which are more or less soluble in water, and ether-alcohol will give low results, but in the main the process is a satisfactory one.

ASSAY OF VINEGAR OF OPIUM.—In the American Journal of Pharmacy, L. F. Kebley describes in detail a method he has devised for estimating the amount of morphine contained in vinegar of opium. He adds 8 to 10 cc. of strong ammonia water to 100 cc. of the vinegar of opium to render it alkaline. Then 2 cc. of ether are added and the whole vigorously shaken for ten minutes and set aside over night. The alkaloids are then filtered out through a wetted filter paper and washed very sparingly. While still moist, the precipitate is washed into a small capsule with a very little water and to the contents of the capsule are added 10 cc. of 5 per cent. sulphuric acid, gentle warmth applied by a water bath, the solution cooled, allowed to stand an hour, filtered and the filter and residue washed well with distilled water. The process of the U. S. P. can be followed from this point, or, if desired, evaporate in a weighed capsule to 14 grains, and proceed from this point as directed by the Pharmacopoeia of 1889. The purity of the morphine should be tested by the lime water test, and as a check of the method, the writer recommends to titrate the morphine with a volumetric acid solution.

EXAMINATION QUESTIONS.

This Department is for the publication of questions and answers from our readers; the object being to place before them questions for self-examination and to indicate the directions in which study can be profitably carried on.

We solicit questions to which replies are desired, particularly questions suggested by personal experience and study.

Correct answers to the questions in each series will be published in a subsequent issue of the paper, as announced together with the names of all persons sending us correct replies.

Write the number of the series at the top of your reply and write on one side of sheet only.

Address—EDITOR PHARMACEUTICAL ERA,
106 Fulton Street, New York.

SERIES NO. 4.

Replies should reach us not later than June 15, 1894. Correct answers, together with the names of all persons answering will be published as soon thereafter as possible.

(1) How would you distinguish between carbolic acid and creosote?

(2) What is a symbol, also what does a chemical formula represent?

(3) How would you prove that the specific gravity of iron is 7.50?

(4) Define stigma, and mention a drug which the pharmacopoeia directs shall consist wholly of stigmas?

(5) How would you distinguish between gallic and tannic acids?

(6) Name the best excipient for a pill mass with each of the following: An essential oil, potassium permanganate, Balsam copaiba, silver nitrate, corrosive sublimate.

(7) How would you dispense the following prescription?

Ferrous sulphate 60 grains.

Potassium carbonate 36 grains.

Mix, and divide into 24 pills.

(8) How many one-eighth grain doses should there be in one-eighth ounce bottle morphine sulphate as found in the market?

(9) What is an alcohol chemically considered? Name those covered by your definition that are official in the United States Pharmacopoeia.

(10) How would you prove the air to be a mixture and not a chemical compound?

(11) What is the difference between benzoin and benzol?

BENZO-PARA-CRESOL.—Prepared by action of benzoyl chloride on the sodium salt of para-cresol. Insoluble in water. Soluble in ether and hot alcohol. Properties antiseptic.

TO MASK COD LIVER OIL.—Place twenty parts cod liver oil, one part freshly ground and washed coffee and one-half part pure ivory black in a flask and warm over a water bath to a temperature of 50 degrees to 60 degrees C., keeping the flask well corked. Let stand for three days, with occasional shaking; filter and preserve in well corked bottles.

SALICYLIC ACID is prepared by a newly patented German process, through the action of carbonic anhydride upon a mixture of phenol and excess of potassa, the operation being conducted in a closed vessel at a high temperature. Subsequent precipitation of the salicylic acid is effected with a mineral acid, and the product purified.

**FORMULARY
AND
QUESTION BOX.**

The object of this department is to furnish our subscribers with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION. To insure answer in the next number, queries should be in our hands ten days prior to the date of issue.

6063. Prescription Difficulty.

(Drugs.)—In further solution of your difficulty commented upon in the April 1 Era, S. A. Epstein, Chelsea, Mass., advises the following procedure: Mix the 1 oz. aromatic syrup of rhubarb, 1 oz. castor oil, and ½ oz. powdered acacia and rub until a smooth and uniform mixture is obtained, then add the 6 drs. paregoric and 1 oz. tincture cardamom compound.

6122. Syrup Yerba Santa.

(B. S.) A correspondent from Philadelphia submits the following formula, which he says yields a very satisfactory preparation:

- Yerba santa.....4 ounces.
- Cloves2 drams.
- Anise1 dram.
- Coriander seed1 dram.
- Cardamom seed1 dram.
- Potassium bicarbonate ½ dram.
- Cochineal½ dram.
- Sugar2 pounds.
- Water, enough to make 2 pints.

Boil the aromatics, except the cloves, with the yerba santa, potassium, bicarbonate and water for one-half hour. Then add the cloves and cochineal and boil twenty minutes more. Strain, add the sugar, dissolve with a gentle heat, adding enough water to make the quantity measure two pints.

Criticising the formula, it would seem that the amount of sugar directed to be taken is rather more than can be held in solution by the water at ordinary temperatures. It makes too heavy a syrup, with a tendency for the excess of sugar to crystallize out.

6147. Phospho-Guarana with Celery.

(F. A. S.)—Your query seems to be abundantly answered in the May 1 Era, p. 399, No. 6,134.

6148. Paste Metal Polish.

(G. C. Y.)—See formulas for Putz pomade, p. 455, Era of Nov. 15, 1893, also Nos. 4128 to 4153 in the Era Formulary.

6149. Percentage Solutions.

(T. B. H.)—All the points in your query seem to be well covered by answer 5,799, page 503 of the Era for Dec. 1, 1893.

6150. Luminous Paint.

(C. J. C.)—You will find a suitable formula on p. 306 of the Era for April 1, 1894. We would not advise a phosphorus preparation.

6151. Tooth Powder.

(W. H. L.)—We cannot give you the formula of the proprietary preparation you name. You cannot fail to find a formula satisfactory to you among the many the Era has published. Consult the indexes for last year. See also Era Formulary.

6152. Antipyretic Mixture.

(Salob)—We cannot supply you with the formula for the antipyretic mixture you

name. Read paragraph in the National Dispensary under acetanilide, page 11. See also formula No. 5,339, Sept. 1, 1893, Era, page 204.

6153. Anti-Curl.

(C. J. C.)—Diluted glycerine is reported to have been used with success. The negroes of the West Indies employ soap, which they wet and use as a pomade. Perfumed white soft soap has been suggested, as has also liniment of ammonia suitably perfumed. It would seem that something of an oily and alkaline nature is the desideratum.

6154. Nitro-Sulphuric Acid.

(N. B.)—There seems no available information concerning this acid, if there be such an one. As a guess at its nature we hazard the conjecture that it is a mixture in molecular proportions of nitric and sulphuric acids, though what would be the chemical constitution of the mixture is hard to state.

6155. Liquor Laws and Kansas Druggists.

(Salob)—We have never been able to understand fully the intricacies of the laws governing the sale by druggists of liquors in prohibition States. Rather than refer the points raised by your query to us, we would suggest you write the Secretary of State at Topeka for a copy of the law in question.

6156. Lustre on New Rubber Goods.

Arkansas Traveler wishes to know how to remove the white lustre from new black rubber goods. The Tyer Rubber Co. say that by this lustre or white finish is presumably meant the "bloom of sulphur," as it is called in the trade. If so, it can be removed by boiling in a strong solution of chloride of lime. Will any of our readers give the result of their experience in this direction?

6157. Moxie.

(W. F. K. Drug Co.)—You know what are the claims for this preparation. The Western Druggist says it is a decoction of oats made into a syrup and flavored with sassafras and wintergreen. In another place the same journal says it is believed to be a syrup of sarsaparilla and licorice, flavored with oils of wintergreen and sassafras. Chemists have reported no alkaloids in it. Nothing very definite, you see.

6158. Cosmetic Cream.

(A. Drug Co.)—Try this: Melt together 265 grains petrolatum, 50 grains white wax and 30 grains spermaceti. While cooling incorporate 40 grains bismuth oxychloride and ½ grain mercuric chloride, the latter previously dissolved in a little alcohol, and finally, when nearly cold, stir in 20 minims spirits of rose (4 drs. oil to 1 pint alcohol) and 1-16 minim oil of bitter almonds. The Era has published many formulas for color creams and similar preparations. Consult indexes.

6159. Catarrh Balm.

(W. J. S.)—Here are three formulas which produce articles of the same general nature and method of use as those which are found in the trade as proprietary preparations:

- (1) Thymol 1 part, oil wintergreen 2 parts, bismuth subnitrate 65 parts, petrolatum 2132 parts.
- (2) White wax 60, paraffin 30, oil sweet almonds 120, petrolatum 240, sodium nitrate

30, water 30, oil lemon 10, oil orange 2.

(3) Vaseline 1 oz., thymol 3 grains, bismuth carbonate 15 grains, oil wintergreen 2 minims.

6160. Syrup Wild Cherry for Soda Fountain.

(F. A. S.)—The following is a formula which has been found to give satisfaction and will doubtless meet your wishes:

- Elixir wild cherry.....20 ounces.
- Syrup.....1 gallon.
- Solution gelatin.....1 ounce.

The elixir of wild cherry directed is composed of 1 pint fluid extract of wild cherry and 1 gallon simple elixir. The solution of gelatin may be made of about the strength of an ounce of gelatin to the quart, or of such consistence as experiment demonstrates is best for the purpose.

6161. Lemon Sugar.

(D. C. T.)—By lemon sugar is intended sugar which is flavored to taste with oil of lemon. The general formula for these oil-sugars directs one drop of the ethereal oil to be thoroughly rubbed up with 2 grams powdered sugar. The proportion may be varied to suit your pleasure and the purpose for which the article is to be employed. Under the name lemon sugar are found mixtures of which this is a type: Sugar 4 pounds, tartaric acid 3 ounces, oil of lemon ¼ ounce, intimately mixed. In the formula for dry lemonade to which you refer you can use which best pleases you.

6162. Expansion of Metals by Heat.

(Subscriber.)—The changes of bulk which metals undergo with changes of temperature are relatively greater than those of other bodies, but each metal has its peculiar rate of expansion, as shown in the following table taken from Brande's Chemistry, in which 1,000,000 parts of each metal are supposed to be heated from 32 degrees to 212 degrees F.

	Increase in length.	Increase in bulk.
Platinum.....	1 in 1,131	1 in 377
Palladium.....	1 in 1,000	1 in 333
Antimony.....	1 in 923	1 in 307
Iron.....	1 in 846	1 in 282
Bismuth.....	1 in 718	1 in 239
Gold.....	1 in 682	1 in 227
Copper.....	1 in 582	1 in 194
Silver.....	1 in 524	1 in 175
Tin.....	1 in 516	1 in 172
Lead.....	1 in 351	1 in 117
Zinc.....	1 in 340	1 in 113

6163. Composition for Cleaning Wall Paper.

(Mrs. H. C.) Try the following: Mix together one pound each of rye flour and white flour into a dough, which is partially cooked and the crust removed. To this 1 ounce of common salt and ½ ounce of powdered naphthaline are added, and finally 1 ounce of corn meal and ½ ounce of Venetian red or burnt umber. The composition is formed into a mass, of the proper size, to be grasped by the hand, and in use it should be drawn in one direction over the surface to be cleaned.

(2) Another method is to take fresh made dough to which has been added a few drops of ammonia. Go carefully over the paper, and as the dirt accumulates on the outside of the dough, work it to the

inside, and as the ammonia evaporates, add a few drops from time to time.

6161. Iodine and Calcium Iodide.

(W. G. R.) wants an opinion on this:

Tincture of iodine.....70 drops.

Iodide calcium q s.....1 ounce.

M. S. Shake well and take 5 drops 3 times a day.

There is obviously some mistake here, either in writing or copying the original prescription. Iodide of calcium is a solid, very soluble in water and alcohol, but the mixture directed would not produce a solution which could be administered as ordered. Undoubtedly, the solvent intended has been inadvertently omitted, and further comment and conjecture are impossible. The physician should be consulted with regard to his purpose.

6165. Potassium Iodide Incompatible with Cinchona and Iron.

(Rhd) dispensed this prescription:

Potassium Iodide.....1 ounce.

Elixir bark and iron.....4 ounces.

M. S. Dose, teaspoonful three times a day.

He used the N. F. elixir No. 45 in compounding, and found a greenish yellow precipitate was produced. What was the reaction, and should the mixture be dispensed with a shake label?

The elixir of calisaya and iron of the N. F. contains the official phosphate of iron. This salt produces in solution with potassium iodide a reaction of an oxidation and reduction nature, the solution acquiring a greenish yellow color. In this instance, the alkaloids of the calisaya are precipitated by the iodide, and the suspension of the precipitate in the colored solution is what has attracted your attention. The mixture is an incompatible one, and should not be sent out, even with a shake label.

6166. Ferril Oxidum Hydratum cum Magnesia.

(H. E. R.) in making this preparation obtains a clear, dark red solution, rather than a precipitate, and wishes to know what is the matter. The cause of the difficulty is excessive acidity of the solution of ferric sulphate; there being enough free acid present to combine with all the magnesia to form soluble salts, having no magnesia for precipitating the iron. You must be sure that your iron solution be made strictly in accordance with the U. S. P. formula, for the formulas of that work are calculated with exactness, the quantities of chemicals directed for the desired changes being computed with accuracy. Arbitrary deviation or carelessness in manufacture will not result in the proper preparations. Try this one again, being sure that in making your iron solution the proper quality and amount of iron sulphate be used, that the acids employed are of the prescribed strength and that the finished solution be of official specific gravity.

6167. Interstate Registration.

(Sajoi) The interchange of certificates is a matter of mutual agreement between the different boards of pharmacy of the different States. We do not know whether any such arrangement has been made by the Kansas board of pharmacy with the boards of other States or not. The secretary of your State board can give you information upon this point. The licen-

sure of any one of the following boards of pharmacy can be registered without further examination upon paying the required fee and furnishing a certificate from the secretary of the board examining him that he passed the examination five per cent. higher than was actually required in Michigan, Wisconsin, Minnesota, North and South Dakota, Washington and Missouri. Of course, this is reciprocal, any one of the boards in the States named recognizing the certificates of each of the others. For further information, write to the secretary of the board of pharmacy of the State in which you wish to become registered.

6168. Laxative Syrup for the Soda Fountain.

(C. H. M.)—Try the following:

Oil cinnamon.....1 dram.

Oil cloves.....2 drams.

Oil nutmegs.....80 drops.

Tincture tolu.....12 drams.

Tincture ginger.....12 ounces.

Extract cascara, fluid,

tasteless.....16 ounces.

Magnesium carbonate.....2 ounces.

Water enough to make....4 pints.

Triturate the oils, tinctures and fluid extract with the magnesium carbonate, gradually add enough water, passing it through the filter to make 4 pints.

To make the syrup for the fountain, take

Cascara extract (as above), 6 ounces.

Flavoring extract of

orange.....2 ounces.

Syrup.....1 gallon.

Solution gelatin or soap

bark.....1 ounce.

Color with caramel if necessary.

A formula for tasteless fluid extract cascara, as may be found on page 258, March 15, 1894, Era, query No. 6042.

6169. Liquid Glue.

(G. C. Y.)—(L) A liquid glue, always ready, and which will keep indefinitely, is made by dissolving 60 parts borax in 100 parts water, adding to the solution when boiling, 4 parts 90 per cent. calcined potash, and then adding this mixture while boiling to 1450 parts of hot glue liquor having a density of 12 degrees Baume.

(2) Acetic acid.....4 ozs.

White glue.....3 ozs.

French gelatin.....4 fl. ozs.

Shellac varnish.....4 drs.

Distilled water.....4 ozs.

Dissolve the glue in the acid with heat, and the gelatin in water with heat. Mix the two solutions gradually until homogeneous; then add the varnish, and put into bottles.

(3) Macerate 3 parts of good glue in fragments of 8 parts of water for several hours, adding $\frac{1}{2}$ part of hydrochloric acid and $\frac{3}{4}$ part of sulphate of zinc, exposing the whole for 10 to 12 hours to a temperature of 175 degrees to 189 degrees F. This mixture is permanent, remains liquid, and forms an excellent paste.

6170. Government White Wash.

(H. F. L.)—The following coating for rough brick walls is used by the United States Government for painting light-houses, and it effectually prevents moisture from striking through: Take of fresh Rosendale cement 3 parts, and of

clean, fine sand 1 part. Mix with water thoroughly. This gives a gray or granite color, dark or light, according to the color of the cement. If brick color is desired, add enough Venetian red to the mixture to produce the color. If a very light color is wished, lime may be used with the cement and sand. Care must be taken to have the ingredients well mixed together. In applying the wash the walls must be wet with clean, fresh water, then follow immediately with the cement wash. This prevents the bricks from absorbing the water from the wash too rapidly, and gives time for the cement to set. The wash must be well stirred during the application. The mixture is to be made as thick as can be applied conveniently with a whitewash brush. It is admirably suited to brick work, fences, etc., but cannot be used to advantage over paint or whitewash.

6171. Coca Wine from the Leaves.

(H. P. K.)—Here are several formulas:

Coca leaves.....3 ounces.

Brandy.....1 $\frac{1}{2}$ ounces.

Sherry.....24 ounces.

Tokay wine.....6 ounces.

Macerate for about a week, press, and to the liquor add 9 grains of citric acid; set aside for a few days more and filter.

(2) Coca leaves.....60 grams.

Red or pure white wine (containing 10

to 15 per cent. of alcohol) enough to make 1,000 liters.

Macerate for 10 hours, then filter.

(3) White sugar.....14 ounces.

Coca leaves in No. 29 pow-

der.....5 ounces.

Distilled alcohol.....24 ounces.

Claret wine, up to.....20 ounces.

Mix the spirit with 15 ounces of claret, moisten the powder with it and pack in a percolator, placing the sugar in the receiver. When the fluid commences to drop, close the orifice, and allow to macerate for 24 hours. Then allow to percolate, adding more claret until 20 ounces of liquid have been collected.

6172. Cold Cream.

(K. N. W.)—We can suggest no better formula than that given in the pharmacopoeia of 1890. It differs somewhat from that given in the previous issue of the same work, the proportion of the rose water being greatly reduced, making a more stable preparation. Sodium borate has been added to increase its whiteness, a substance likely to prove objectionable in cases where the ointment is used as a basis in prescriptions containing ingredients likely to react with it. As the ointment is liable to become rancid when long kept, and the rose water to separate upon exposure, Laidly has proposed the substitution for the rose water of oil of rose and glycerine, the former in the proportion of two drops, the latter in that of four fluid drams, the quantity of spermaceti being increased by two drams. It may not be out of place to state that by warming the rose water before adding it to the fats in the official process, the danger of a granular ointment by partial precipitation of the spermaceti is obviated.

See also formulas in the Jan. 15, 1893, Era, page 63, and March 1, 1894, Era, page 212.

6173. Dry Plates for Photography.

(H. F. L.)—We cannot give the formulas for the emulsions used in making the Seed and Harvard dry plates, and lack of the necessary technical experience and skill prevents our giving more than a mere outline of the process of making dry plates in general. The manufacturers named have their own formulas, for which they claim certain advantages, and it is to them you should apply for what information they are willing to give. The coating of the plate is in principle merely bromide or other highly sensitive silver salt, suspended in or emulsified by gelatin or collodion, and flowed upon the glass plates, where it dries, forming the film which is later to receive the photographic imprint through the camera. Great experience and manipulative skill are necessary in the production of satisfactory plates, and there are as many formulas for emulsions as there are manufacturers, for each of the latter has his favorite formula, his little dodge. The amateur or small operator had best purchase his plates—not attempt to make them. We advise that if interested in photography you make a careful study of it, from books and by experiment, mastering its chemistry and its technical processes. Any dealer in photographers' supplies can suggest books of value, and there are several excellent journals devoted to the craft with which you should be familiar.

6174. Pulverized Iron and Pulverized Copper.

(M. M.) asks for information regarding the preparation of these two substances, directed to be used in the formula for a hair dye given on page 15 of the Jan. 1, 1883, Era. Powdered iron is official in both the United States and British pharmacopoeias under the title "Ferrum Reductum; or reduced iron." No process is given for its preparation in the present pharmacopoeia, though several processes have been proposed for obtaining it. Morgan of Dublin recommends the use of dried potassium ferrocyanide, thoroughly mixed with anhydrous ferric oxide, and calcination with pure potassium carbonate at a low red heat. The product contains all the iron in a reduced state, mixed with soluble matters, which are carefully washed away. A similar process has been proposed by a German chemist, iron oxalate being substituted for the ferric oxide. According to the United States Dispensatory, a powder of iron has been introduced into this country under the name of "alcoholized iron," said to be prepared, in the eastern parts of Germany, by attrition of iron filings with honey, by some cheap method, as by attachment to a saw mill or steam machinery. It has the appearance of powdered plumbago, but under the magnifying glass is seen to contain particles with the metallic lustre, and rounded as by friction.

Powdered copper may be prepared as follows: Mix equal parts of a saturated solution of copper sulphate with hydrochloric acid; in this place a strip of sheet zinc. The copper is thrown down in fine

powder. The powder is then washed with alcohol and dried as quickly as possible. You should be able to purchase these powders from your jobbing druggist.

6175. Stamping Powder for Embroidery.

(J. H. W.)—Ultramarine, to which has been added a small proportion of powdered resin, is generally used for stamping embroidery patterns on white goods. The powder is dusted through the perforated pattern, which is then covered with a paper and a hot iron passed over it to melt the resin and cause the powder to adhere to the cloth. The following are said to be excellent powders:

1. White.—One part each of resin, copal, damar, mastic, sandarac, borax and bronze powder, and two parts white lead.
2. Black.—Equal parts resin, damar, copal, sandarac, Prussian blue, ivory black and bronze powder.
3. Blue.—Equal parts resin, damar, copal, sandarac, Prussian blue, ultramarine and bronze powder.

In all these powders the gums are first to be thoroughly triturated and mixed by passing through a sieve, and the other ingredients carefully added. Other colors may be made by using chrome yellow, burnt or raw sienna, raw or burnt umber, vandyke brown, etc. For stamping fabrics liable to be injured by heat, the stamping is done by moistening a suitable powder with alcohol and using it like a stencil ink. White lead gives good results in this way. See also reply to query No. 6135, Era, May 1st, page 399.

6176. Sourcing of Infusions.

(H. W. S.) writes: "Some time ago I put up a preparation of crude cotton root bark, cramp bark, star grass and squaw vine, steeping the crude drugs for some time in hot water, and at last adding one and one-fourth pounds of sugar to the gallon of fluid, after which was added an ounce of alcohol to the pint. Now this mixture (several gallons) has soured. I have prepared sarsaparilla, stillingia and other alternatives in precisely the same manner, with the same amounts of alcohol and sugar, but with the addition of about four grains iodide of potash to the ounce of liquid, and it has always kept free from fermentation. Why did the former sour and the latter not? Was it on account of the iodide of potash in the one and not in the other? Or do the drugs mentioned in the former preparation require more alcohol to preserve them than those in the latter, and if so, how much is necessary? Further, is the therapeutic virtue of the sour preparation impaired or destroyed?"

We do not think such a preparation as you describe is a very scientific one, and the chances are that you will frequently have trouble with it. An infusion or decoction is very prone to decompose, and in this instance the drugs contain certain principles, soluble in water, which ferment under slightest provocation. The quantity of sugar employed is so small that it rather favors than prevents fermentation, and if alcohol is used it must be in such amount that the preparation is virtually a tincture in alcoholic strength. Then, too, the addition of alcohol to the infusion will precipitate gum, pectose and allied substances, materially

altering the composition of the preparation. Even with the sarsaparilla preparation you have been lucky that it did not spoil, for if the temperature is right it is almost sure to do so. We would suggest that instead of attempting to make a satisfactory preparation in this way, you use the fluid extracts of the drugs, modeling somewhat after the National Formulary Compound Elixir of Cramp-bark (No. 107). A well-made elixir will give you much better satisfaction, and will contain the medicinal virtues of the drugs in equal degree with the infusion you have been making, and which must be made strongly alcoholic to preserve it. The sour preparation is worthless, and should not be sent out. The iodide of potash has nothing to do with the question of preservation.

6177. Bleaching Sponges.

(E. and McC.)—Ordinarily sponges are cleaned and bleached by the use of permanganate of potassium, followed by a solution of sulphurous or hydrochloric acid. This is substantially the process adopted by the National Formulary, a method which satisfactorily whitens the sponges, but often partially destroys their tissues. Sometimes the sponges are first soaked in dilute hydrochloric acid and then treated with the permanganate. In bleaching, the first thing to do is to clean, wash and squeeze out the sponges. They should be well beaten to get rid of sand and loose earthy matter, soaked in water for some hours, then squeezed dry, and placed in a tub containing dilute hydrochloric acid. After remaining in this solution until all effervescence is over and no hard particles are seen or felt—stirring them about with a stick is useful to hasten the process—they should be well squeezed and transferred to a pan of water under a running tap. Next, the sponges are placed in a 2 per cent. solution of potassium permanganate. After soaking them for a few minutes—the exact time can be best judged by the color, which ought to be dark-brown—they are to be removed, again washed, and put into another tub of solution of half a pound sodium hyposulphite and one ounce oxalic acid to one gallon of water. Here the sponges soak for about fifteen minutes. Finally, take them out and wash them thoroughly. By this treatment the sponges are rendered perfectly white and remain so. Many sponges contain a more or less dark-colored core, and if treated only with permanganate and acid the core is either not bleached at all, or if bleached somewhat, the tint is apt to grow darker again. By the combination of the three solutions every portion is thoroughly and permanently whitened.

Roeser claims that bromine water is preferable for bleaching sponges, especially after being used in surgical operations. The sponge is thoroughly disinfected and may be put through the process eight or nine times without destroying its texture. His method is this: Wash the sponges in warm distilled water (not above 150 deg. F.) which contains in each liter 20 drops of 10 per cent. solution of caustic soda. After thoroughly treated in this manner, they are drained and placed in vessels containing the bromine water, which is made by adding 30 grams

of saturated aqueous solution of bromine to one liter of distilled water. Leave the sponge in this solution until it is discolored, and repeat with fresh bromine solution until it is thoroughly bleached, which is hastened by warmth and exposure to sunlight. After removal from the bromine bath, squeeze the sponges well and immerse them in a dilute solution of soda (2) drops of a 10 per cent. solution to the liter), and lastly wash out all traces of bromine odor with distilled water.

FORMULAS.

6175. Cholera Cures.

Bevan.

Magnesium sulphate2 drams
Sulphurous acid.....16 drams
Tincture capsicum.....4 drams
Water.....16 drams
Teaspoonful night and morning.

6179. Medical Review.

Strychnine sulphate¼ dram
Sulphuric acid, dilute.....½ ounce
Morphine sulphate.....2 grains
Camphor water.....3½ ounces

A teaspoonful every hour or two, well diluted. (In threatened collapse).

6180.

Tincture opium5 minims
Chloroform.....15 minims
Alcohol.....1 dram
Distilled water.....1 ounce
Take at a dose.

6181. Flatulent Dyspepsia.

Union Medicate.

Bicarbonate of sodium75 grains
Prepared chalk.....1 dram
Powdered nux vomica.....15 grains
Powd. red cinchona bark.....1 dram

Make twenty cachets. One before each meal.

6182. Anti-Dyspepsia Cachets.

Dujardin Beaumetz.

Subnitrate of bismuth.
Sulphate of magnesium.
Prepared chalk.
Phosphate of calcium—of each 2 drams.

Mix and divide into 32 cachets. One before each meal in dyspepsia, accompanied with acidity and flatulence.

6183. Application for Toothache.

Practical Dentistry.

Tincture opium1 ounce
Camphor.....2 drams
Chloroform.....6 drams

Dissolve and apply on wool to the cavity of the tooth.

6184. Local Dental Anæsthetic.

Ether1½ drams
Menthol.....1 dram
Extract of Indian hemp.20 grains
Oil of pepperment.....20 min.

6185. Orange Bitters.

Orange peel1 ounce
Candied citron peel.....½ ounce
Gentian root.....½ ounce
Cascarella.....½ ounce
Alcohol.....15 ounces
Water.....15 ounces
Macerate for a week, filter, and make up to 20 ounces.

6186.

Tonic.

Potter.

Quinine sulphate30 grains
Dilute sulphuric acid a
sufficient quantity.
Tincture chloride of iron.....2 drams
Water enough to make.....2 ounces

6187.

Quinine sulphate1 dram
Strychnine sulphate.....1 grain
Tincture chloride iron.....5 drams
Phosphoric acid, dilute.....2 ounces
Syrup lemon enough to
make.....6 ounces

A teaspoonful in water three times daily in nervous debility.

6188. Cream of Camphor.

1½ ounces of castile soap in shavings is dissolved in 6 fluid ounces of water, previously mixed with 2 fluid ounces of water of ammonia; the solution is well mixed with a solution of 1½ ounces chloride of ammonium in 6 fluid ounces of water, and a solution of 6 drams of camphor in 6 fluid ounces of oil of turpentine is then added, with brisk agitation in order to secure a perfect emulsion.

6189. Liquid Hydrastis, Colorless.

West, Dr.

Hydrastis in fine powder16 ounces.
Glycerin8 fl. ounces.
Ether,
Sulphuric acid, dilute,
Water, of each, sufficiency.

Exhaust the hydrastis with ether, recover the ether by distillation, add 8 fluid ounces of water, to which has been added about 1 fluid dram dilute sulphuric acid to the residue, let stand one week under frequent agitation. Pour off the aqueous solution and mix it with the glycerin.

6190. Home Liniment.

Am. Drug.

Cottonseed oil8 ounces.
Oil wintergreen¼ ounce.
Turpentine3 ounces.
Chloroform1 ounce.
Aqua ammonia3 ounces.

This furnishes an excellent embrocation. The wintergreen may be replaced with any suitable aromatic oil, such as rosemary, cedar or thyme.

6191. Clarified Honey.

Obtained by diluting the crude honey with half its weight of water, boiling for 15 or 20 minutes, according to the quantity operated upon, the scum being carefully removed, and then adding 5 or 6 times sufficient cold water to interrupt the boiling for not over half a minute. After boiling for another 15 minutes, the hot honey is strained and evaporated.

6192. Essence of Hannan.

Banana fruit, peeled1 pound.
Alcohol1 pint.
Water1 pint.
Macerate for 14 days, express, and strain.

6193. Soluble Essence of Lemon.

Oil lemon10 fl. ounces.
Alcohol125 ounces.
Chloride calcium300 grains.
Phosphate sodium.....1½ ounces av.
Carbonate sodium.....¾ ounces av.
Water19 ounces.
Dissolve the oil in the alcohol and add to it the chloride of calcium, dissolved in 5 ounces of the water. Then dissolve the two sodium salts in the remainder of the

water, and this to the alcoholic solution, shake well and repeatedly during four days and filter.

6194. Lemonade Essence.

Hager.

White sugar600
Distilled water400
Heat until dissolved, then add
Acetic acid40
Orange flower water.....160
Filter
Alcohol100
Oil of lemon recent.....10

1 part of this essence to 10 of water makes an agreeable lemonade.

6195. White Lilac Extract.

Ind. Pharm.

Tincture storax2 ounces.
Tincture orris root.
Extract cassia, from pomade.
Spirit neroli.
Rose water, of each.....8 ounces.
Extract tube rose, from pomade2 pints.
Alcohol4 pints.

6196. French Cold Cream.

Quince mucilage20 ounces.
Almond oil½ ounce.
Stearic acid5 ounces.
Glycerine1 ounce.

6197. For Chapped Hands.

Quince seed2 drams.
Water2 pints.
Boil down to one pint and filter, and cool, after which use in the following proportion:
Quince seed jelly8 ounces.
Glycerine4 ounces.
Bay rum4 ounces.
PerfumeQ. S.

6198. Paste for Comedones.

White clay (kaolin).....4 drams.
Glycerin3 drams.
Acetic acid2 drams.
Oil lemon5 drops.

Apply every night. In a few days the black specks can be easily pressed out or most of them will come out by simply washing the face with pumice stone soap.

6199. Corn Plaster.

Resin plaster, 5 parts; melt, stir in of sal ammoniac (in fine powder), 1 part, and at once spread it on linen or soft leather.

6200. Mustard Tablets.

Sixty-six parts of sweet almond oil and 33 parts of yellow wax are melted together, and, when somewhat cooled, 1 part ethereal oil of mustard is added, and the whole poured into molds of suitable shape and size and lined with tinfoil.

6201. Mucilage (Solid).

Ch. and Dr. Diary.

Steep gelatine 2 ounces in water 4 ounces until soft. Then add gum arabic 3 ounces and gum tragacanth 1-2 ounce, dissolved in water 6 ounces, and glycerine 1 ounce. Heat on a water bath until the desired consistence is reached.

6202. Leather Dressing (Brown.)

Make a creamy polish by boiling together 4 ounces of yellow wax, 1-2 ounce of potassium carbonate, 2 drams yellow soap and 12 ounces of water. With this incorporate by shaking 5 ounces spirit of turpentine and color with 4 grains of phosphine (brown aniline) in 1-2 ounce of water.

THEODORE METCALF.

IN the death of Theodore Metcalf, which occurred at his home at Brookline, Mass., April 26, after an illness of less than a week, the druggists of Boston lost one of their best friends and the city a distinguished citizen. His name was one of the best-known in the drug trade in Boston, and his house ranks among the foremost firms of the city. For more than half a century Mr. Metcalf carried on his business as druggist and apothecary on Tremont street, opposite the old King's Chapel burying ground, and, until the last four years of his life, he devoted his entire energies to the details of his extended business. He was born in Dedham, Jan. 21, 1812, his ancestors having come to that town from England in 1634. When he was 14 years old he was apprenticed for seven years to a druggist at Hartford, Conn., where he served for his full time and re-

mained for three years more as a partner. In the Spring of 1837 he started an establishment at 39 Tremont street in Boston, which surpassed any similar house then existing in the city. His success increased constantly, and his house ever maintained the high position which it took from the very start. In 1845 he gave up his business to Joseph Burnett, who had been his assistant for several years and who ran the business for ten years, until Mr. Metcalf returned to his old store. Then Mr. Burnett became engaged in the manufacture of chemicals. Within recent years there was established a branch house at the Back Bay, at the corner of Boylston and Clarendon streets. In 1883 the firm of Theodore Metcalf & Co. was dissolved by the retirement from it of Mr. Thomas Doliber, after twenty years of partnership.

Mr. Metcalf did much for the elevation of the profession of the pharmacist. As the Boston Herald said in an editorial: "Probably it is speaking within bounds to say that the late Theodore Metcalf did as much toward promoting and elevating the drug trade in Boston as any other man in New England. He lifted the trade of a pharmacist almost to the dignity of a profession, and he kept it there." He had an intuitive perception of character, and this enabled him to have around him men of the best executive ability. Several years ago he associated with himself the heads of his different departments in his immense business and incorporated the Theodore Metcalf Company, at the head of which is Mr. F. A. Davidson, and of which Mr. Metcalf was the treasurer at the time of his death. He was an energetic worker

and was at his store up to the Friday before his death, being taken ill on his way home.

One of the most interesting events in all his business life was the celebration of the golden anniversary of his career in Boston by a dinner which was notable in the drug trade of the city. It was served at the Bevere House, and was attended by a hundred of the leading citizens of Boston, including the Mayor, Dr. Oliver Wendell Holmes, William Warren the actor, Dr. Thomas L. J. Jenks and many others. The Autocrat then spoke in his inimitable way, recalling the times when he was practicing in Boston and Mr. Metcalf filled his prescriptions. Among other things, he said: "I like to call him 'Dr.' Metcalf. Many a time during the years of our long acquaintance, when not feeling just right physically, have I slipped in the rear door of Metcalf's, and he would fix me up something that would put body and brain in good working trim again." Gov. Ames and other officials of the State sent on that occasion letters testifying to their sincere appreciation of Mr. Metcalf's worth and integrity.

Mr. Metcalf was very active in affairs outside of his business, although he had no taste for political life and declined to accept honors which were offered him. For more than thirty years he was the treasurer of the Channing Home. He was one of the founders of the Boston Druggists' Association and was its first president, being at all times very active in its membership, giving to its members the best of his rich experience. He was one of the founders of the American Pharmaceutical Association, one of the promoters of the Massachusetts College of Pharmacy, a trustee of the City Hospital and of St. Elizabeth's Hospital and one of the first presidents of the Catholic Union.

For many years, and up to the time of his death, he was a devout Catholic, being a constant attendant at the Cathedral of the Holy Cross, as he was an intimate friend of Archbishop Williams.

In 1864 he was married to a daughter of E. D. Sohler of Boston. His widow, a son and three daughters survive him.

Mr. Metcalf was of a very charitable disposition, and was at all times ready to assist personally and financially all objects of a worthy and charitable nature. Another thing that marked him was his kindness to younger men. Many young men will testify to the great assistance and encouragement given by him, thus enabling them to prosecute successfully their aims in life.

The various organizations with which Mr. Metcalf was connected took appropriate action on his death. The Boston Druggists' Association called a special meeting, which was held at Young's Hotel on the afternoon of April 28. President J. F. Babcock presided and delivered a short eulogy of Mr. Metcalf. Tributes to the memory of the deceased were also paid by the Hon. Gorham D. Gilman, Prof. Marston, Thomas Dolber, N. J. Rust and others. A committee of three was appointed to draw up resolutions, which were adopted by a rising vote. They were as follows:

"With great sorrow our association is called to lament the sudden decease of its first president, our dear friend and fellow member, Theodore Metcalf. He has passed away after a life of more than fourscore years spent, to the latest moment, in active, kindly usefulness.

Theodore Metcalf came to Boston in 1837, bringing with him a thorough knowledge of the drug business and a high ideal of its future. In his quiet, unassuming way, by his example and influence he gradually brought about a realization of that ideal; and to him, perhaps, more than to any other, is due the credit for the advancement in pharmacy, the beneficial effects of which are felt and acknowledged in the community to-day. During all this time Mr. Metcalf has held in a marked degree the respect and esteem of all who knew him, not only those of his own profession, but the entire community as well.

It is pleasant for us to remember his high character, his integrity of purpose, his ripe judgment, his extraordinary ability in every duty to which he was called. We extend to his friends, for he carried into every word and act a genial, generous nature, a manly courtesy and a sympathetic, loving heart. He was in the truest and best sense a Christian gentleman, and his memory will be ever held sweet and precious by every member of this association. May his life be to us a perpetual benediction.

"We see him as he moved,
How modest, kindly, all-accomplished,
With what sublime repression of himself,
And in what limits, and how tenderly."

His extent to the family our sincere sympathy in a bereavement which is ours as well as theirs.

The funeral services, which were held in St. Mary's Church of the Assumption, Brookline, on the morning of April 30, were of an impressive nature. Schmitt's Requiem Mass was sung by the full choir, assisted by Miss Ella McLaughlin, soprano; Miss Carrie Reid, contralto; Samuel Tuckerman, tenor, and Lon F. Brine, bass. The organist was J. Frank Donahoe, of the Cathedral of the Holy Cross. The services were conducted by the Rev. L. J. Morris as celebrant, the Rev. John Lyons as deacon, and the Rev. Walter Butler as sub-deacon. The floral display was very simple, the principal tributes being bunches of callas and white roses tied with satin ribbon. Upon the coffin was a wreath of calyx leaves and roses and a cross of roses and ferns. After the services the body was taken to Forest Hills for burial in the family lot.

The pallbearers were F. A. Davidson, George F. Brown, Edwin W. Shedd, M. F. Lyons, Frank C. Montgomery and Albert H. Luker. Many prominent business men attended the services. The Boston Druggists' Association was represented by Joseph Burnett, J. S. Badger, Hon. Gorham D. Gilman, J. C. Lowd, Fred Carter, A. G. Weeks of the Weeks & Potter Co., E. S. Kelly, W. C. Durkee, Waldo Cutler and Thomas Dolber. Others present were Patrick Donahoe, publisher of the Pilot, Hon. G. S. Hale, Hon. P. J. Flattery, T. G. Garzan, Fred Mills, Gordon Dexter, Henry Canning, Dr. Haskell Brown, Causten Brown, J. F. Solner and J. B. Hand.

Druggist Creclutus, of Louisville, had a pile of insect powder in his window. It caught fire from a lamp. Policemen overpowered by the flames. Blaze put out by stream from soda fountain.

NEWS COMMENT.

Wm. A. Greenwall, a prominent pharmacist of Anoka, Minn., is dead.

The negroes charged with killing Druggist Eyster, of Indianapolis, are undergoing a second trial.

A woman sued Druggist Geo. A. Fullerton, of Marion, Ia., for \$4,000 damages for selling liquor to her husband. The jury awarded her \$500.

The Sagar Drug Company, the new wholesale drug house at Duluth, Minn., formally opened its establishment the evening of April 19.

The druggists of Springfield, Mo., rightly object to the work of itinerant nostrum venders, and have made it decidedly interesting for some of that ilk.

Sharpers in Newark, N. J., visit the druggist, make a trifling purchase, and while the druggist is counting out change for a large bill a confederate sneaks in and steals everything in sight. Druggist Linnett lost \$73 in this way.

A clerk with McJure, Walker & Gibson, Albany, N. Y., on April 21 dropped and broke a large bottle of ammonia. He was immediately overcome by the vapor, and it was only by the greatest efforts of the physicians that his life was saved.

The drug store of E. C. Andrew, Montgomery, Ala., was the scene of a terrible duel to the death, April 22, between two prominent young professional men. After shooting each other full of holes, one of the contestants crawled over to his adversary and brutally beat the latter's head. A local paper says of this blood-thirsty individual that "He was as bright as he was brave and honorable."

W. D. Tallman, Syracuse, N. Y., has sold his store at West and Gifford streets to J. W. Wade, and with a partner, C. M. Schultze, has opened a magnificent store at 348 South Salina street. The manufacture of a full line of physicians' supplies, such as tablets, etc., will be made a specialty. The store is very large and splendidly equipped, tile floor, steel ceiling, quartered-oak fixtures, self-warm from Whitall, Tatam & Co., a \$3,000 fountain from Tufts.

One of the latest chemical discoveries is a method for the artificial production of petroleum. The process is simple and effective. It is the distillation of animal fats and oils at a temperature of 300 to 400 degrees Centigrade at a pressure of 25 atmospheres in a strong iron vessel. About 70 per cent. of the fatty matter is transformed into petroleum, this being 90 per cent. of the theoretical yield. The discovery is not of any commercial importance up to date, as the artificial product costs a great deal more than the natural.

An interesting decision is that in the case of T. E. Regan, administrator for Francis R. Murphy, who recovered \$10,850 from Cook County, Illinois, on a contested bill of goods sold and delivered, Murphy did business under the name of the Chicago Pharmaceutical Company, and supplied the county hospital with drugs and supplies. The County Board rescinded its contract after the goods were delivered on the ground of fraudulent auditing of bills. The court held that fraud had not been shown. Murphy was county druggist at the time and audited his own bills.

The Chicago Inter Ocean relates that a druggist, Edward M. Castle, in Dresden,

NEW YORK.

New York, May 10.—How did you like the "Moving Day Number" of The Era? I suppose it is useless to ask that question, however, for in going around among the trade since the first of this month I have not found a person but who took pains to commend the excellence of that issue of this journal. Not only the typographical appearance, which was certainly striking enough to call forth praise from those who are considered judges in such matters, but the entire paper, end to end, was called "excellent." It was to deserve such praise that the publisher of The Era and his staff worked with more than the usual vigor for some weeks. To move a journal like The Era from Detroit to New York was no small job in itself, but at the same time to get out such a number took all the energy and most of the time of every person employed on this paper. The first Era that bore the New York date must be made so good that the trade should not forget it for months and years to come—May 1, 1894—and when in the future some new man in the drug line asks a friend when The Era came to New York, the answer ought to come promptly—"May 1, 1894." However, it must not be thought that The Era proposes to live for even a single minute on the reputation of a past issue. The field for that sort of thing is already occupied. It is all very well, if you like it, to take a paper from force of habit. But little good does one get except from a wide-awake journal, one you buy because you know if you do not you will lose something, and that is just the sort of a paper men say The Era is. However, in regard to the "Moving Day Number" some apology is due for a few mistakes which ought to be pardoned under the circumstances. The generous welcome extended by the New York trade is an assurance that whatever fault can be found will be lightly touched upon, and, as in the past, The Era will strive to please all its friends and to be impartial in its distribution of favors. There is one other point that must be emphasized. The experience of Mr. Lewis Hopp among the members of the drug trade of this city was a very pleasant one, and The Era echoes his words: "It pays an out-of-town druggist to visit New York at least once a year if he makes a tour of the trade." As in the case of Mr. Hopp, The Era will do all it can to see that any visitors are shown just what they want to see, that they are directed promptly to houses that are best to trade with, and a cordial invitation is extended to the trade generally to call at The Era office and make it their headquarters while in this city. The advantage of this is obvious.

All members of the Society of Chemical Industry of London in this country, as well as the drug trade generally, will be interested in the proposed formation of a local section of that association in this city. There are in this country at present 25 members of the English society and about seventy live in New York and its vicinity. About two weeks ago a meeting of the members living in and near this city was called to consider the scheme. There was a satisfactory attendance, and after discussing the subject for a time the chair

appointed a committee to consider by-laws and to see what was necessary in order to form the local section. The second meeting was held on May 9, and it was decided to petition the council of the home society for permission to form the New York section. The necessity for a further general meeting was apparent, so one has been called for Tuesday, May 15, at the College of Pharmacy Building, 209 East 23d street. The meeting will be called to order at 8.15 p. m., and signatures to the petition will be asked for. It is hoped that the home society will see its way clear to grant the desired permission.

It will be remembered that The Era sent a representative to Albany while the Legislature was threatening to pass certain bills affecting the drug trade, and by going direct to the heads of the committees which had the bills in charge found the trade had no cause to worry over the measures. This information was printed in The Era, the chairmen of the committees giving information that the bills were to be killed. The Era's statements consequently about the bill to compel the analysis of patent medicines and the bill increasing the tax for a certain kind of druggist's license were correct, and were given to the trade within a few days of their introduction of the measures. The Legislature did not pass either of the bills, just as The Era said it would not, and they died in committee. If the Legislature did nothing to help the trade, at least it did nothing to hurt it, and that is worth giving thanks for.

Happening to drop into the office of Fairchild Bros. & Foster, on Fulton street, the other day, just about lunch time, I was surprised to find that the firm supplies the young women working there with a lunch, put up at the Fulton Club. The linen, silver and china are all furnished by the firm, and when the eatables are brought over from the club the table is already spread, and very inviting it looks, too. The young women are thus enabled to enjoy the noonday meal without the bother of putting on wraps and going out into some crowded restaurant. They can take their time, have good, wholesome food, and enjoy their chats without inconvenience. Some thirty young women are thus benefited, and it does not cost them a cent. It would appear to an outsider that this is a very good thing for both the firm and the young women. While the firm has to pay the bills, it knows that the employees appreciate the kindness, and that its workers are apt to be in better health because of this arrangement. I am inclined to think that if other firms would imitate the example of Fairchild Bros. & Foster they would find real satisfaction.

The troubles of Mr. and Mrs. C. Williams Meinecke have been aired a great deal of late, and have furnished the daily press with quite a supply of stories. Mr. Meinecke is the head of the firm of Meinecke & Co. of 255 Greenwich street, and his wife alleged that he deserted her. At any rate, just as public interest in the case was subsiding Mrs. Meinecke tried to commit suicide, failed, sued for divorce, and has not yet secured it. Mr. Meinecke's story is entirely different from

W. H. MADISON.

On the third page of the special cover of the May 1st Era was presented a group portrait of the Faculty of the New York College of Pharmacy. By some unaccountable mistake the portrait of another gentleman appeared instead of that of W. H. Madison, instructor in pharmacy. We rectify this error, so far as possible, by presenting above a good portrait of Mr. Madison, a brief biographical sketch of whom is also given on page 571 of The Era for Dec. 15, 1893.

Yates County, N. Y., is offering, in the name of the International University, the honorary degree of doctor of divinity (with net diploma) for \$5. The Rev. David Swing received one of these appeals and turned it over to the newspaper.

Among the stockholders of the recently organized Citizens' National Bank at Appleton, Wis., we find the following: C. S. Little, J. H. Kamps, W. F. Montgomery, druggists at Appleton; Geo. Bauman, druggist at Oshkosh; Otto Kuehmsted, representing Greene & Button, Milwaukee; W. F. Pfueger, representing Lord, Owen & Co., Chicago. Paid-up capital, \$150,000.

F. M. HALLORAN.

We are informed of the death of F. M. Halloran of Frankfort, Ky., one of the best known druggists in Central Kentucky and a most active member of the State Pharmaceutical Association. His death was caused by an inflammation of the brain, which in turn resulted from a prolonged and violent inflammation of the ear, but he had been confined to his bed only two days before his death, which occurred on April 29. Mr. Halloran was 34 years of age. He came to Frankfort from Paducah eleven years ago to enter business with S. B. Holmes, and at the time of his death was junior member of the firm. He was also chairman of the Legislative Committee of the State Association, and to him is due the major portion of the credit for securing the existing pharmacy law. One of his associates, in speaking of his qualities, says: "No more generally beloved or more deservedly popular member of the profession could have been selected by the grim Reaper."

his wife's, but he has pursued the policy of keeping his mouth shut, and only answers his wife's charges through his lawyers.

Prof. Charles F. Chandler has the sympathy of a host of friends over the death of his wife, which occurred on the 6th of this month. Mrs. Chandler had been ill with heart failure for about two weeks. She was the daughter of the late James H. Craig of Schenectady, and a descendant of Major-Gen. Robert Sedgwick, one of the colonial settlers of Massachusetts. She was also a lineal descendant of Anneke Jans, whose heirs have laid claim unsuccessfully to much of the property owned by Trinity Church. Mrs. Chandler leaves one child, a daughter, who is the wife of Charles Ernest Pellow, a nephew of the late John Jay. Mrs. Chandler was active in charitable work, and was a director of the Home for Incurables. She was at one time one of the managers of the Nursery and Child's Hospital.

The relationship to the late John Jay mentioned also recalls the fact that the Schieffelin family is connected with that of the famous legal light, and very closely, too, Dr. W. J. Schieffelin being a grandson. Another death read with regret by the drug trade was that of Abram J. Hardenbergh, the father of Abram Hardenbergh of the drug firm of Hardenbergh & Angus, which occurred in Port Jervis last week.

The committee of arrangements and entertainment of the N. W. D. A. is hard at work perfecting plans for the coming meeting of the association in this city. The meeting is to be held early in October, and, as one of the committee said the other day, the members can be sure that a fine programme will be arranged for the amusement and edification of all.

Zipp's pharmacy in Brooklyn has moved up Sumner avenue a block.

Frank E. Wicks of Detroit was in town for a few days a week or so ago.

W. L. Schaaf has bought out the store of Barry & James, 798 Eighth avenue.

Emil Utard of the New York branch of Ed. Flinaud has returned from California.

J. W. Riehl of Astoria is going to open another store in the same place next week. "Business is not so bad as some people try to make out," said a druggist yesterday.

M. Tschirner of the Olympic Drug Store of St. Louis was seen on Fulton street a few days ago.

Albert Shiels is now the proprietor of the drug store at the corner of Broadway and 12th street.

Druggist Larklin has opened a store at the corner of Sumner and Putnam avenues, Brooklyn.

The office of the College of Pharmacy is now at the new building, Secretary Griffin being in charge.

Carl Erkens, formerly with Wheeler & Guck, is now with T. E. Fraser at the corner of Second avenue and 54th street.

It is a pleasure to meet H. W. Atwood on the street again. He was sick for a long time, but that smile of his is still there.

Thomas P. Kelly, class of '93, Brooklyn College of Pharmacy, is about to sever

his connection with T. Fleet Speer of Brooklyn.

E. M. Patterson of Grunow & Patterson of Detroit was a caller at The Era office a few days ago. He called for Scotland the same day.

Some of the drug trade men who patronize her restaurant on William street, will miss "Katie" when she gives up her place and goes to Europe.

Edwin H. Knox has bought out the interest of his partner in the drug store at Mount Vernon. Mr. Knox was a member of the class of 1893, N. Y. C. P.

Fire in the store of Rudolph Burkhardt at 1056 Greene avenue, Brooklyn, caused a loss to stock and fixtures of about \$2,000. The cause of the fire is not known.

Peter R. Lance, of W. R. Warner & Co., has gone out on the road again. This is his regular Southern and Western trip, and he is not expected back for six months.

Among the other passengers on the Teutonic were Edward Evans, Jr., and Mr. Carlton of Carlton & Klissam. What a good time they must have had with Brent Good and John Cox.

J. N. Hegeman & Co.'s 59th street store will, it is expected, be opened about the 15th of this month. Mr. Moderwell, who was in charge of that store, is now taking a short vacation.

Theodore Welcker of Merck & Co. sailed for Europe on the Augusta Victoria on May 3. He will be abroad for about three months, and will visit Darmstadt and other cities.

F. B. Lippincott of Trenton and John J. Flynn of Mount Holly, N. J., have recently put in fountains furnished by the Low Art Tile Company, through Howell & Sangston, the New York agents.

There are eight graduates of colleges of pharmacy employed at the Hudnut store in the Herald building. Six of the number are from the Philadelphia College and the others from the New York Institution.

Permission has been granted to the Martin Kalbfleisch's Sons Co. to change its name to the Martin Kalbfleisch Chemical Co. The change was made through an order of Justice Beach of the Supreme Court.

Rush Smith of the Philadelphia house of Hance Bros. & White has been in temporary charge of the New York office of the firm for a short time, while Manager McDougal was absent, attending the funeral of a relative.

The friends of E. M. Estey have been congratulating him on his election as president of the Commercial Travellers of America. Mr. Estey is a representative of a large drug house and makes his headquarters in this city.

"I hear that the ——— Company expects, and really seems likely, too, to clear a million in profits this year," was the casual remark of a drug trade man to the writer on Thursday. And he named the company. Can you guess what concern it is?

Everybody is pleased to see that Fassett & Messaros are making such a success of their store, the Lenox Pharmacy, at the corner of 132d street and Lenox avenue. The pharmacy will soon be the one store of the vicinity. If things keep

on. The "Messaros" of the firm is a lady, by the way.

In a chat with The Era man to-day a salesman for a druggists' sundries house said: "I know that the World's Fair did a great deal toward educating the people of the West up to the fact that cheap goods are the worst to buy. It has been the general custom for Western people to call for the cheaper lines of goods, but I now see a change."

Lawyer John Eichler, who was sent to the penitentiary in January last for eighteen months for blackmailing Druggist Otto Doepfner of 337 Third avenue, has been pardoned by Gov. Flower. Doepfner, who had been accused by a client of Eichler, alleged that the lawyer threatened him with criminal prosecution unless he made a money settlement of the case.

L. N. Dronberger, representing Thurston & Braidich, drug importers, is now in the city. He is the personification of good humor, and is always a very welcome visitor among his numerous New York friends. Mr. Dronberger is one of the most accomplished mimics known to the trade, and his German dialect stories are gems, appealing strongly to the risibilities of the most phlegmatic.

H. M. O'Neill, formerly in business on Hudson street in this city, has bought the Crescent drug store in Newark. This store was in the hands of a receiver. When the Crescent Co. went under, it was found that it had thirteen safes in its office, enough, one would think, to hold not only all its money but most of its goods. The Crescent store was what may be called a "dandy," but it was too expensive.

The corporation doing business under the name of Alexander Hudnut has taken a ten years' lease of the store adjoining the Mall and Express building, on Broadway. The premises are now being thoroughly refitted, and soon another Hudnut store will adorn the big thoroughfare. Mr. Hudnut's stores are nothing if not elegant. George Bancroft is the manager of the corporation and the active partner.

George J. Seabury has had a very enjoyable time down South and has reduced its weight some also. He was in Washington at the height of the Coxy rumpus, and, it was whispered, was called upon to organize a committee of thirty to rid the city of the tramps. Such may not have been the case, but if it was not the people of Washington neglected a good opportunity. Mr. Seabury would have had the city cleaned out in 24 hours.

Five months seem a pretty long time to keep a man on the road in one State. S. D. Wadham, of W. R. Warner & Co., has just come in from such a trip and reports business as very good throughout this State, which is his territory. Mr. Wadham is known to the trade in about every little place in New York as well as in all the large cities. He covers the field thoroughly and finds it pays not to neglect even the smallest hamlet.

The laboratory of W. H. Schieffelin & Co. has been removed from Front street to 458 East 144th street, but it will not be there for long. In five months it is expected that the new laboratory of the firm on 132d street will be ready for occupancy, and then this temporary place will

be given up. The new laboratory will, of course, be fitted up with all the latest improvements, and Dr. W. J. Schieffelin is giving the matter his personal attention.

That Red Cross bill is dead. Johnson & Johnson filed their protest with the proper committee at Washington, the brief being drawn by Roland Cox, the well-known trade-mark lawyer. The protest set forth the absolute unconstitutionality of the proposed measure and showed that full protection is given to the society by common law. The Red Cross Society has withdrawn the measure, and so it is, as was said, dead. Outside of the firm most interested one could hear condemnations of the bill, and everybody is glad that right won at Washington for once, anyhow.

The E. M. Johnson Co. has moved from 33 to 14 Platt street, and will occupy the entire second floor of that building. Speaking of moving, there were fewer changes on the 1st of May this year than for many years past. R. W. Phair & Co., agents for Zimmer's cocaine and for the chemicals of Hoffman & Schoetensack, have moved from Pine street to 14 Platt street. J. L. Hopkins & Co., who were at 14 Platt, are now at No. 12 of the same street, where they occupy the entire building. One well posted man in the trade said that he had heard of no changes in firm names.

Col. Samuel J. Tilden is well known all over the country as the head of a big pharmaceutical house, but he is also very well known in New York and its vicinity as a lover of fine horses. His stables at New Lebanon, N. Y., are not only his pride, but are famous throughout New York State, where good judges of horse-flesh abound. The Colonel's stables were destroyed completely by a fire on the night of April 21. Although some of the stock was saved six blooded horses were burned, including the thoroughbreds Sim and Hindoo mare. All of his wagons, saddles and harnesses were also lost.

W. G. Moffitt's Astor House drug store is now beginning to look as the proprietor wishes. It has been completely changed in appearance, and very much for the better. Mr. Moffitt had the plans for the renovation all ready when the fire turned things upside down early in January. Since then the refitting has progressed with all possible haste, and in a week or two will be completed. The woodwork alone, Mr. Moffitt says, cost \$3,000, and the fountain as much. The proprietor was for thirteen years a clerk with the former owner of the store, and is consequently well known to all the patrons of the place.

Richard D. Young, Jr., son of the Fifth avenue perfumer, was tried and acquitted of the charge of stealing an overcoat from his father. The case came up in the Court of General Sessions last week, and after hearing all the evidence Judge Cowing directed the jury to acquit the young man. Mr. Young, Sr., testified during the trial that he made the charge so that the son could be sent to some institution where his bad habits could be cured. The young man is addicted to the morphine habit, and the father has been unable to cure him. The officer who arrested the defendant said that at the time he found opium in his pockets.

There were some smiling countenances to be seen in drug trade circles on the morning of May 8. The final changes in the drug schedule of the tariff bill, published that morning, were the cause. Opium, it appears, will continue free, and I was told by one interested person that the price is likely to drop. Just here it may be said that one could not detect any smiles on the faces of those gentlemen who were said to have been engaged in working up a corner in opium. There was some justification over the fact that borax had been put back to the old rate and that ultramarine blue would continue at 3 per cent. specific duty.

Society as well as the drug trade was well represented at the White Star line pier on the second day of May, when Brent Good of the Carter Medicine Company and John W. Cox of the Antikamnia Company went aboard the Teutonic, bound for a little continental trip. Among the many friends of the tourists were noticed John M. Peters, Thomas P. Cook, Joseph A. Toy, Mr. Kissam, Harry Good, Miss Good, and, of course, a number of relatives. There were also many ladies there who seemed quite broken-hearted over the departure of somebody they knew, but whether our drug trade friends were the objects of this attention or not, my informant declined to say. Messrs. Good and Cox will stay abroad about six weeks and while having a good time will, it is understood, devote a little time to business.

The winner of the tournament of the Wholesale Drug Trade Bowling Association turned out to be the team from the office of Parke, Davis & Co. The Dodge & Olcott team was second. The victorious team will receive a prize of the value of \$25, and the second one valued at \$15. There were also three individual prizes, for the highest average, highest individual score and for the bowler who received the highest number of spares. These were won respectively by Messrs. Jenkins of Parke, Davis & Co. Rudman of Dodge & Olcott and Mariager of Parke, Davis & Co. The last meeting of the association was adjourned, subject to the call of the Chair, and it is not known at present when the next meeting will be held. It will come when the committee which has the matter of getting up a circular to the trade in reference to next season's tournament is ready to report.

COLLEGE OF PHARMACY COMMENCEMENT.

Carnegie Hall was filled from topmost gallery to the doors on the evening of Wednesday, April 25, by the relatives and friends of the graduates of the New York College of Pharmacy. It was the annual commencement of the college, and in honor of "the boys" the building was ablaze with light, redolent with the perfume of flowers and filled with the strains of sweet music. There was nothing lacking to make the occasion linger pleasantly in the memory of those most interested in the exercises of the evening.

During the gathering of the faculty of the college on the platform the Seventh Regiment Band played "Joan of Arc," "Pictures of the North and South" and national airs. Then the graduating class,

125 in number, marched in from the corridor, keeping step to the taps on a drum by a little drummer boy. H. W. Atwood of the Board of Trustees led the march of the graduates to the platform, where they found their seats behind a row of flowers that extended from one side of the proscenium arch to the other.

The exercises were opened by prayer, the Rev. Joseph Merlin Hodson making the offering. President Samuel W. Fairchild followed with a brief address, in which he called attention to the new college building, its thorough equipment as a modern school of pharmacy, and the steady progress in the work of the institution.

Secretary J. Niven Hegeman read the roll of graduates, and President Fairchild, on behalf of the Board of Trustees and by the power invested by the authority of the State, conferred the degree of Graduate of Pharmacy on the members of the class.

The address of the evening was delivered by the Rev. Dr. J. W. Brown, rector of St. Thomas'. He referred to the faculty being composed of comparatively young men, which was a sure indication that this institution was destined to an even greater future prosperity. He spoke of the acquirements of accuracy, the necessity of fidelity to study and sincerity of purpose, and reminded the class that some of the most wonderful discoveries were made by pharmacists.

Professor C. F. Chandler read the "roll of honor." To have been one of the 123 was an honor, he said, but to be one of the thirteen honor men was a thing for them to be proud of the remainder of their lives, and he trusted that they might always lead in any enterprise with which they might be connected. The honor roll consisted of the following, who, out of a possible 500 points, received the annexed number: W. A. Bastedo, 577; E. Jordan, 547; B. Culp, 543; F. C. A. Schaefer, 542; J. R. Wood, 540; H. Kreuder, 538; J. H. Wurthmann, 531; R. W. Schaul, 526; O. Neubert, 524; C. L. Richter, 523; B. F. Williams, 518; F. J. Hills, 507.

The special prizes of \$100 each were given to J. R. Wood, in operative pharmacy; F. C. A. Schaefer, in practical pharmacy, and E. Jordan, in pharmacognosy and materia medica. The alumni prizes were awarded by Herman Graeser, president of the Alumni Association, who made a brief speech, saying in part:

"The Alumni Association feeling that it had an unselfish duty to perform in assisting its alma mater to raise the general standard of excellence required, decided to lend its assistance in such a manner that the increased amount of study required of a student in order to reach that standard would be felt by him to be more of a pleasure than a duty or hardship. Therefore it was decided to give what are generally known as the Alumni prizes. Competition for these prizes has been one of the factors in urging every student to put forth his best efforts to attain the all desired end of superior excellence, to reach that point in college fame where he can stand and wave his bunting to the breeze, having dived all competitors, and cry 'Excelsior!'

"There are three prizes to be awarded—a gold medal to the student attaining the highest general average, a silver medal to his closest competitor, and a bronze medal to the student ranking third. The total number of marks attainable were 60, of which Mr. W. Arthur Bastedo received 57, or 95.16 per cent.; Mr. Ernest Jordan received 54, or 91.16 per cent.; Mr. Brevard Culp received 53, or 90.60 per cent. It gives me great pleasure in behalf of the Alumni Association, to present to you these medals for general excellence. It is the highest honor our association bestows."

The list of graduates is as follows: Gustav Abbehusen, Gustav H. Ankersen, Harry C. Annes, Max A. Auerbach, W. A. Bastedo, Mark De W. Benjamin, Jas. W. Bingham, William Boehme, Henry G. Born, August W. Brater, August H. Bresloff, George F. Burger, John D. Case, Oscar B. Chapman, William L. Clarke, Wm. H. Clinton, Jr., Samuel Cohn, Tunis F. Cook, Moses Cowen, Harry W. Crooks, Bevard Culp, Thomas N. Davies, Albert E. Davis, B. Edgar Dawson, Frederick W. Drenckhahn, Frank E. Eely, Peter J. Ehrigott, Philip Eichler, Sarah S. Emory, Ludwig C. Erb, J. Stewart Faulkner, Meyer Frankel, Isadore Fried, John G. Foratz, George C. Frolich, Leo W. Geisler, Jr., Wm. Gerard, Conrad Glogau, Charles O. Grube, George Hall, Frank J. Herbig, Hieronimus A. Herold, Franklin G. Hillis, Frederick P. Hiltz, Harootin K. Hiantian, George E. Holland, Albert Horne, John P. Hutchison, Emil Imhof, Henry P. Johnson, George L. Johnson, Ernest Jordan, Moses Katz, James Kaveny, Cornelius D. Kay, John J. Kealy, Frank J. Keller, John Ketterle, Jr., H. J. Kirchner, Nelson S. Kirk, William Kirkpatrick, Walter Koennemann, Paul Koretzki, Henry Kruder, Felix Krumbholz, Joseph Kussy, Peter F. Lally, Jacob J. Lauffer, Frederic T. Lewis, Frederic W. Linnig, Ernest K. Loveland, William O. Luttmann, F. Wesley McCullough, Julius Mackiewicz, Louis Marcus, Frank W. Maring, Otto C. Marx, Carl A. Meisner, Charles Miller, Anthony H. Molina, Samuel Morris, Charles F. J. Muhl, Barnard Muller, Joseph T. Munk, Robert R. Murison, Eugene W. Myers, Otto Neubert, John Novarine, George F. Phelps, Frank N. Pond, Charles B. Prior, Clarence W. Race, Carl L. Richter, Chas. H. Roberts, Abram Robinson, Oscar J. Ruzicka, George R. Sagar, Mortimer W. Sargent, Ferdinand N. Sauer, Frederic C. A. Schaefer, Emil A. T. Schlichting, Louis W. Schulze, Ralph W. Shaul, Peter Siegrist, Charles R. Seimann, George W. Simrell, James J. Skelly, Frank S. Smith, Edwin G. Stiebeling, Frederick Stock, Charles H. A. Stoerzer, Frank H. Struck, Gray B. Sullivan, Harry Terhune, George S. Tomlinson, Robert M. Ullrich, Charles L. Van Nuis, Oscar I. Van Tassel, Louis E. Wade, Alfred H. T. Walker, Abraham Weiss, Frank L. Wilcox, John P. Wilcox, Benjamin F. Williams, Charles T. Wolf, Joseph R. Wood, J. Henry Wurthmann, William C. Youngs.

The class of '94, N. Y. C. P., held its final reunion and banquet at Clark's on West 23d street. The faculty enjoyed the dinner with "the boys," and the affair was certainly well managed and very pleasant. President Ehrigott acted as

toastmaster and made an address of welcome. Frank J. Keller responded to the toast "Our History," Fred P. Hiltz to "Our Alma Mater," Nelson S. Kirk to "Our Faculty," Joseph R. Wood to "Our Future" and Joseph Kussey gave the valedictory. Other speeches were made by Drs. Elliott, Rusby and Coblentz, Instructors Oehler and Mattson, President Graeger of the Alumni Association, Henry Kraemer, editor of the Alumni Journal, and several members of the class.

The Alumni Association of the New York College of Pharmacy will have its annual outing on Wednesday, June 20, at Peteler's Hotel, New Dorp, Staten Island. These outings are made very enjoyable occasions, and the committee having the matter in charge will see that this year's outing is even better than that of last year, if such a thing is possible.

HONORED PRESIDENT FAIRCHILD.

The gathering of congenial spirits around the dinner table is always a pleasant occasion. How much more so is it when friends who thus break bread together assemble to honor one of their number who is deserving of every whit of admiration and respect that is showered upon him. Such a gathering was that in the red room at Delmonico's on Thursday evening, May 10. The recipient of the honors of the evening was the president of the New York College of Pharmacy, a modest, hard-working gentleman, to whom not only are many young pharmacists of the present day indebted, but whom thousands who are to join the ranks of that profession will have cause to thank.

Notwithstanding the large membership of the New York College of Pharmacy, the number of working members is comparatively small, as is usual in institutions of the kind; but what the active members lack in numbers they make up in zeal. A few years ago Mr. Samuel W. Fairchild, a comparatively new member, was elected to the presidency of the college. He at once joined hands with the old band of workers and directed his energies to the upbuilding of the institution. The excellence of the instruction offered attracted so many students that the capacity of the building then occupied by the college was taxed to its utmost, and a project was formed to erect a building specially adapted to meet the requirements of a practical school of pharmacy. Into this project Mr. Fairchild threw himself with his accustomed zeal, and to-day the new college building is so far completed that the office of the college was transferred to it at the beginning of the present month. The completion of the new building furnished an occasion which was gladly seized by the officers and active members of the college to pay a tribute of their regard to Mr. Fairchild in recognition of the great amount of time and labor he had given to college affairs, and an invitation was extended to him to meet a company at dinner at Delmonico's on the evening mentioned.

The invitation card sent to President Fairchild is a handsome one, executed in

perfect good taste. It consists of twelve pages, bound in red morocco, silver scroll work points, gilded, protecting and sheathing the outer corners of the front cover. The inside of the cover is watered silk. The third page bears the illuminated title:

SAMUEL W. FAIRCHILD,
Kingsbridge, N. Y.

The letters are in red and blue on a background of gilt. Surrounding the inscription and filling the length and breadth of the page is a well-executed framework in colors. The fifth page is also printed in colors, and reads as follows:

"Samuel W. Fairchild.

"Dear Sir: As officers and members of the College of Pharmacy of the City of New York, we desire to show our appreciation of your devotion to the interests of the college, and of your uniform courtesy to those with whom you have been associated in conducting its affairs, by inviting you to meet us at a dinner to be given in your honor at Delmonico's on Thursday, May 10, at seven o'clock. If the date and hour suit your convenience, trusting you will favor us by accepting our invitation."

Following come the signatures of the officers and members as follows: George Massey, first vice-president; John R. Caswell, second vice-president; Horatio N. Fraser, treasurer; J. Niven Hegeman, secretary; Herman W. Atwood, T. J. Macmahan, Charles Rice, Charles Holzhauser, W. M. Massey, Henry Schmid, S. J. Bendiner, Theodore Louls, T. F. Main, Domingo Peraza, Reuben R. Smith, Clarence O. Bigelow, John McKesson, B. T. Fairchild, George William Kemp, Alfred Henry Mason, John M. Peters, Adolph Tacheppé. On the eleventh page is mounted the menu card.

Mr. William M. Massey presided at the dinner. He was chairman of the committee of arrangements, and his good taste was amply shown in all the little details that make such an affair enjoyable. There was a wealth of flowers in the banquet room, a really wonderful display, and as for the dinner, nothing need be said. It was served as only Delmonico can, and was as choice a collection of good things as the most exacting could demand.

The toast of the evening, of course, was that to the health and happiness of President Fairchild. The honored guest responded in a feeling manner. Then followed remarks by everybody in turn. The talk was about the work of the college in the past and the good work it is hoped it will do in the future, now that such a home and such facilities are offered in the new building. Every one present was imbued with the feeling that the college had not only done great good, but is to do greater and better things in the future. Letters were read from many members who were unable to be present, but who wanted to show that they were there in spirit at least, and that they too honored and respected the president of the college.

BOSTON.

Boston, May 10.—This is the season of the year when the Druggists of Massachusetts cities are all anxiety in regard to the securing of a license. In many places the question has aroused considerable discussion, and Selectmen and Aldermen have had a hard time in settling affairs in a satisfactory manner.

Twenty-five of the Cambridge druggists have received licenses, and several applications are on file, as the committee are not quite satisfied with the reports from the patrolmen, who seem to figure as witnesses in these cases more than any other individuals. It is expected that the few who are on "probation" will be reported upon favorably at the next meeting.

For several weeks before granting licenses to the druggists of Brookline, the Committee on Licenses, on the part of the Selectmen, had the matter under consideration. At a special hearing before the Board of Selectmen the five druggists appeared with their books, and every sale was scrutinized by the officials. The opponents to the granting of licenses were represented by Rev. Luther Beecher, who said, among other things, that at the appraisal of goods of a Brookline apothecary, recently deceased, \$2,000 worth of the \$4,000 worth of goods found in stock was wines and liquors. He knew the Brookline people were sincere in their petition that no licenses be granted to drug stores. Notwithstanding the protest, licenses were granted to W. H. Butler, D. F. Baxter, A. J. Hayman and Young & Brown.

There are a great many druggists in Lynn, some of whom have been engaged in the business for many years, and have always been privileged to sell liquors for medicinal purposes, without interference. This year the drug store that has any liquor on sale will have it confiscated in the name of the law. A great deal of the accumulations of stock will be stored until next year, when, it is thought, after a year's experience, the sixth-class license will not be conspicuously absent in the annual distribution. The Board of Aldermen has positively declined all applications, and every petitioner for a license has been given leave to withdraw. This in a city of 65,000 to 70,000 people. The Committee on Licenses recommended unanimously that no licenses be granted, and the Board of Aldermen accepted the report unanimously, and adopted the recommendation without a show of debate. Boston is the nearest place in which a prescription calling for spirituous liquors can be filled.

Six druggists in Woburn have been granted licenses, but the Mayor of that city has not yet signed the documents. One of the reasons given for this action on the part of the city's Executive is that his wishes in the case of two applications were ignored. The Mayor declines to be interviewed on the subject. The saloon keepers, to the number of thirteen, were also granted licenses, but these have not yet been signed by the Mayor.

Not a druggist in Malden had his license renewed at the meeting of the Board of Aldermen this week, and for the first time in many years no sales of liquor could be legally made in this city at any

one of the apothecaries. There are eight applications on file. The earliest date at which licenses can be granted is May 15. Since the druggists of the city petitioned for licenses a hearing has been held, at which the petitioners were represented by counsel. One of the druggists had his petition indorsed by the signature of every physician in Malden. The opposition to the granting of licenses in this city was most intense.

Every druggist in the town of Watertown received a license at the last meeting of the Board of Selectmen. There was no public opposition to the granting of licenses of the sixth class, but there was not a little in private. The number of druggists in this place has increased two since last year.

When the present members of the Somerville Board of Aldermen were running for office last year they were all interviewed on the license question. Seven of the eight expressed themselves in favor of granting licenses, while the eighth man declined to commit himself. At this writing no druggist in the city has a license, and it will be at least another week before they will know whether they have been favored by the committee or not. It is reported that a majority of the board is in favor of granting one druggist in each ward a license. There are four wards in Somerville. In Union Square, where there are six drug stores in close proximity, the feeling against such an arrangement is rather strong. It is expected that there will be a lively session of the board when the license matter comes up for settlement.

Three licenses of the sixth class have been issued in the town of Dedham—Henry L. Wardle, William Hurley and Harry Smith being the fortunate ones. The Selectmen have given orders to the police to report any infringement of the law. This duty will not call for a display of vigilance, as all the druggists are old residents of the town and men of character and reputation.

It was claimed by the objectors to the granting of licenses in the city of Waltham that the thirsty citizens were last year supplied by the two druggists, who held the sixth-class licenses. It was further claimed that the two apothecaries "laid up" about \$10,000 as the result of their season's work. This year there are sixteen license holders who will sell under the provisions of the sixth class, and nine who will have licenses of the other class, so that the business will be somewhat divided up. Only one druggist of those who petitioned has been refused so far. A temporary injunction was placed upon the license commissioners of this city in April, on the claim that the commission had been legislated out of office when the new city charter was adopted last January, but Chief Justice Field decided that the commissioners had power to hold office.

There were two reports on the matter of granting sixth-class licenses submitted to the Everett Board of Aldermen by the Committee on Licenses. One report favored giving all the druggists a license, while the other recommended that no licenses be granted. One of the Aldermen is on record as saying in open session that in his ward every apothecary store

is a liquor saloon. He did not believe any druggist had a right to sell a man a pint of rum any more than had a liquor dealer. One paid \$1 for the privilege, while the other paid \$1,300. When the question came to vote, the board refused to grant licenses by a vote of four to two. Last year no liquor could be purchased in Everett.

Not a drop of liquor can be obtained in Marblehead, even on a physician's prescription, the Selectmen having positively refused to grant licenses of the sixth class this year. The four druggists in the town presented petitions all well indorsed. At a public hearing the protest against the granting of licenses came in the form of a great gathering of the people, headed by one of the local divines and the president of the Women's Christian Temperance Union. Of the five Selectmen who voted on the question one is on record as voting for license, as in his opinion there should be at least one place in the town where liquor for medicine could be obtained.

After a week of suspense the druggists of the city of Newton to the number of twenty received licenses. There was a great opposition to this class of liquor licenses, and the feeling found voice at a hearing, held a week before, when the City Council decided to act on the question. A number of secret meetings were also held behind the closed doors of the Mayor's office, and all the patrolmen whose beats passed an apothecary store had to give sworn evidence before the Committee on Licenses and the Board of Aldermen. At the last meeting of the board in April it looked as if the whole twenty-eight of the applicants would have leave to withdraw, but at the first meeting in May twenty of the druggists were favorably reported on and their petitions granted.

Much indignation has been expressed by the citizens of Hingham that after the town had voted "no" on the license question the Selectmen had granted three licenses to the three druggists. The town has appropriated the sum of \$1,000 for the enforcement of the law and to prosecute illegal sales. There is a Committee of Five that has the disposal of the money and a special officer has been employed.

Last year the Selectmen of Beverly refused all applicants for licenses in that town, but this year they have voted to grant to all who apply. The clergy and nearly all the physicians asked that druggists have licenses granted them, and that the penalty for a violation of the law be a forfeiture of the license. There was a great deal of inconvenience experienced last year, which the people of Beverly did not care to have repeated.

Owing to some flaw in the applications of the druggists of Uxbridge, the Selectmen gave the applicants leave to withdraw, but also gave them permission to apply again. There are three druggists in this village. The nearest licensed town is Millville, about five miles distant.

At this writing the Selectmen of the town of South Framingham have granted but two licenses of the sixth class, and it is probable that the other five applicants will not get theirs.

Last year's experience in Pittsfield is not to be repeated this year, and the

Selectmen, instead of granting one license of the sixth class, have issued two. There were twelve applicants for druggists' licenses, and considerable pressure was brought to bear on the board to have all treated alike, but this was refused, and a compromise was made on two. The one license system of last year was not only unpopular and severely condemned, but was found to be a hardship.

Not a druggist in the city of Fitchburg will have a license, the Aldermen having voted unanimously not to grant liquor licenses to any one. There were sixteen applicants, all of whom were endorsed. The Committee on Licenses stood five to one in favor, and the Board of Aldermen accepted the report without debate.

In the town of Greenfield the druggists, who have been licensed, are obliged to make weekly reports of their liquor sales, with the list of buyers, amount received, and the quantity sold. The town officials are resolved that no illegal sales shall be made, and will probably employ spotters during the year.

All the druggists of Taunton have been granted licenses. But it took an all-night session of the Board of Aldermen to settle the matter. Besides the licenses of the sixth class, about twenty-six saloon and innholder licenses have been issued.

Five applications for licenses have been received by the selectmen of the town of Amesbury. They have been taken under advisement.

No licenses will be granted in the town of Foxboro. This is the decision of the board, after holding a hearing and getting the public opinion.

Methods adopted in advertising some medicines in Massachusetts received adverse criticism at the State House the other day. It was in connection with the bill to prevent the offensive use of buildings for advertising purposes. Mr. Bliss of West Springfield claimed that the flaring patent medicine advertisements on buildings and fences are a positive injury to property which the State has a right to regulate. The majority of the House did not seem to agree with him, for the bill was rejected.

For some time there has been gossip in political circles in regard to the successor of United States Appraiser Lewis P. Lodge, whose removal is anticipated. One of the aspirants is Andrew H. Ward, who was recently reinstated in his former position of drug examiner, from which he was removed when President Harrison came into power, but his chances are not considered good. In fact, a recent dispatch from Washington says that Dr. Ward will be fortunate if he retains his position as Examiner of Drugs, as there is indignation in the Treasury Department over his alleged attempted interference with the Appraiser's Office. There were many who were of the opinion that ex-Appraiser Stearns of Holyoke would get the position, as it was understood that he was removed simply on account of his politics. As the story goes, Drug Examiner Ward says that Mr. Stearns is not the man for the place, and he has filed charges against him, which have been transmitted to Washington.

One has to go back several years to find the beginning of the trouble between these two candidates for this position. In the

former Administration, when Mr. Stearns was Appraiser and Dr. Ward Drug Examiner, a dispute arose between them over customs matters, and involved a great amount of correspondence with the Washington officials. It is said that at the end Mr. Stearns informed the Treasury Department that he would not be held responsible for examinations made by Mr. Ward, as he considered him incompetent. It was estimated that the Government had lost about \$20,000 in duties from what was declared to be incompetency in the drug department.

A movement has been recently started in this city which might, in a way, have a slight effect upon some druggists in diminishing their receipts from a side line of trade. This is the Anti-Cigarette League, which has been organized in New York, and which the School Committee of the city wishes to see imitated in Boston. A few days ago a meeting of the teachers of the city was called, the invitation being of such a nature that most of the teachers considered it expedient to be present, and then, before the 700 men and women who were present, the aims of the league were expounded. There does not seem to have been any marked interest in the movement inspired by the meeting, and if there are any druggists in Boston who sell cigarettes to school children it seems probable that their trade will be continued without any interruption from the organization of the league.

C. H. Lee of Jamaica Plain has invented an ingenious bottle, which should diminish the number of deaths from accidental poisoning. It is made of blue glass, so that its contents may not be affected by the light, and is moulded into the shape of a skull, with the cross-bones beneath, while the word "poison" is placed in raised letters on the forehead, and at the base of the skull a space is left for the red label to tell the nature of the drug contained in the bottle.

It is interesting the way in which Mr. Lee, who is no druggist or doctor, but a jobber in boots and shoes, had his attention turned to the invention of this bottle. The invalid daughter of C. H. Bowker of Birch beer fame, while groping in the dark for her medicine one night got hold of a solution of carbonic acid and drank it by mistake. The effect was frightful and almost fatal, and it set Mr. Lee to thinking of a means to prevent the repetition of such a thing. The result was the skull bottle. He says of it: "The only criticism offered by the drug trade is that it might frighten some sensitive persons. That is exactly what I want to do. It is better to be frightened than to be killed. The bottle is being used by several of the largest dealers in the trade, and I believe that eventually it will come into general use."

Another bottle item, out one of a different nature, deals with the enforcement of an act passed by the Legislature in 1883 for the protection of owners of cans, bottles, siphons and fountains used in the sale of milk, cream, soda water, mineral and aerated waters, ale, beer, ginger ale and other beverages. The first seizure made under this act occurred in Charlestown on April 21 by the detective of the Manufacturers and Bottlers' Association of Massachusetts, who, armed with five

search warrants, found and recovered 250 registered bottles from William T. Patten, bottler, 556 Main street. The penalty is a fine of not less than 50 cents each bottle and imprisonment for each subsequent offense.

Jason D. Russell, druggist, at Nashua, N. H., offers his creditors 25 per cent. Silas Clark's dwelling and drug store at Townsend, Vt., were destroyed by fire on the afternoon of April 26.

There was a serious fire in Burke's Block, Marlboro, on April 26. T. B. Morse, druggist, sustained a loss of \$3,000; insured.

P. J. Noyes of Lancaster, N. H., denies the report that he is to sell the P. J. Noyes Manufacturing Chemical Works to Parké, Davis & Co., of Detroit, Mich., for removal to that city.

Meal, Boyden & Co., dealers in druggists' sundries, formerly at 176 Devonshire street, have gone into insolvency. They make to their creditors a composition offer of 12½ per cent.

A patent dated April 16 has been granted to Macksey, Helmer and Barton, assignors to the American Soda Fountain Co., for an automatic machine for combining carbonic acid gas with liquids.

F. A. Barker of Gloucester, Mass., whose fire store opposite the Postoffice in that city was recently destroyed by fire, has purchased the E. A. Price store. He was in the city the other day to buy a soda fountain.

Samuel Sawyer committed suicide by taking chloral at the Dexter House, Nashua, N. H., on April 23. For several years he had been employed in Harriman's drug store at Lynn, but he had given up his position there saying that he was going to his old home at Nashua.

An automatic fire alarm prevented a serious fire in the establishment of George C. Godwin & Co., 36 and 33 Hanover street, the night of April 22. Defective electric wires ignited the woodwork in the basement, but the alarm was so promptly given that the flames had not done a damage of \$50 when the firemen arrived.

A three days' session of the State Board of Registration in pharmacy was held in this city beginning May 1, when forty applicants were examined. At the conclusion certificates were granted to the following named: Arthur H. Taylor, Lynn; James E. Fitzler, Lynn; Taylor L. Mills, Boston, and Leon E. Leavitt, Boston.

The following named druggists have either put in new Tuft's soda apparatus or have changed their old for new: H. D. Humphrey, Canaan, Conn.; Edward Whalen, Webster, Mass.; H. Fisher & Son, John E. Ryan, and C. M. Penfield, Bridgeport, Conn.; J. J. Hogan, Birmingham, Conn.; J. J. Nugent, and Curren Brothers, Holyoke, Mass.; M. Mack, Springfield, Mass.; W. H. Boardman, and E. J. Kelly & Co., Londale, R. I.; Hurley Brothers, Stafford Springs, Conn.; E. Thompson & Son, Milbury, Mass.; T. McCaughey, River Point, R. I.; P. Preusser, Westport, Conn.; M. O'Neill, Chicopee Falls, Mass.; H. C. Moynihan & Co., Southbridge, Mass., and Edward W. Bidwell, Unlonville, Conn. These sales were all made by that efficient salesman, J. O. Wild of Holyoke, Mass., who was formerly in the drug business in that city.

PHILADELPHIA.

Philadelphia, May 10.—This is a great soda town. Last year there were in various sections of the city soda water clubs formed. It is understood that the craze this year is greater than ever, and from now on the Summer young man will be expected to treat nightly. The syrup manufacturers are kept busy getting out new flavors. You can get not only fresh fruit, but some of the manufacturers are utilizing flowers. A prominent down-town druggist advertises fresh pressed violets.

For some time there has been a movement on foot to have the receiving stations of the postal service so situated as to afford the most convenience. With this object in view, Postmaster-General Bissell has appointed A. Edward Wendel, the manufacturer of the well known Swiss lozenges, superintendent of the receiving postal station No. 7, at Third and George streets, and John E. Slaughter, superintendent of receiving station No. 13, at Sixth street and Germantown avenue.

Preparations are being made on a large scale for the meeting of the Medical Association in this city, May 15, 16 and 17.

Wm. R. Warner of the firm of Warner & Co. is at present in Europe, where he has been in attendance at the International Medical Congress, held in Rome. While he was in Rome he did as the Romans do—that is, he visited the Pope, besides meeting the King and Queen of Italy, Premier Crispi, Dr. Virchow and other eminent men. The Medical Congress was attended by over 8,000 people, half of whom were doctors. At a reception given by Sir Courtney Charles to the English physicians Wm. R. Warner and Dr. Bradfield of Philadelphia were the only Americans invited, and they wondered why this distinction. At the reception Lady Charles set their minds at rest by saying, "My husband traveled in America some years ago, and he was so kindly treated everywhere, and especially in Philadelphia, that I was determined to do what I could for your people in return. Since your arrival I have had two couriers out scouring Rome for several days to find out for me all of your people that were here."

John D. Park & Sons Co. of Cincinnati have brought suit against the wholesale druggists of that place, also George B. Bowers, Secretary of the Proprietary Committee of the N. W. D. A., to restrain them from, as the firm claims, interfering with their business. What the outcome will be remains to be seen.

The Committee on Proprietary Goods of the N. W. D. A. has issued a supplement to the pamphlet issued by it in 1890, entitled "National Anti-Trust Law Cannot Affect the Contract System." The paper is prepared by Henry La Barre Jayne, the committee's counsel. It cites a number of cases, all having a bearing on the subject.

The druggists of this city have organized the Medicus Bicycle Club. Doctors can become members as well as druggists, but the latter profession is in the majority. The president is James Buckman, who held a similar position with the

Apothecaries' Union; vice-president, W. Nelson Stem; secretary, Rush P. Marshall, of Sixteenth and Race streets; treasurer, Dr. Paul Judd Sartain. The club numbers upward of fifty, and several runs have been made.

The Philadelphia College of Pharmacy, in its annual announcement, about to be issued, will call attention to the fact that the three-year plan has been adopted, and, all those who matriculate after Oct. 15, 1894, will be obliged to take three terms, covering periods from October to April, in three respective years. This makes the college a three-year institution, a decided innovation for a school of pharmacy in the United States. Professors, alumni and members of the college are heartily in favor of the three-year course, and feel that it cannot help but be of material benefit to students.

An eminent scientist whose name is almost a household word with well-informed pharmacists, is on his way from Germany to visit America—Prof. F. A. Fluckiger. He is being accompanied by Dr. Edward R. Squibb of Brooklyn, and will be honored by scientific men wherever he goes. The professor is now a resident of Berne, Switzerland, where he has lived since his retirement from the University of Strassburg. A reception will be tendered him at the college when he visits this city.

The drug store at the southeast corner of Eighth street and Fairmount avenue has been fitted up with new fixtures, etc. Edmund Desmond, class of 1894, has opened a store at Laramie, Wyo. He writes that his store is one of the best equipped in that State.

E. H. Pahey, who has established a good business at 13th and Race, has purchased the store at 10th and Green, recently conducted by Henry Fredericks.

Dr. Schenck, who has had a spell of bad luck for some time in connection with the sickness of his two boys, is in better spirits now, as they are rapidly improving.

Spontaneous combustion of chemicals was responsible for a slight fire in Rosengarten & Sons' laboratory at Seventeenth and Fitzwater streets, recently, but the loss was small.

W. H. Needles, class of 1845 of the College of Pharmacy, died at his home in Germantown on April 17. Mr. Needles was one of the old-time druggists, and he was widely known in this city.

F. P. Rutherford has just had his store at Thirty-second and Powelton avenue fitted up in a gorgeous style, beside making a number of alterations which include the enlargement of the store. It is now one of the finest west of the Schuylkill River.

Henry Isaac Meyers, 26 years, died at Lanark, Pa., on April 20. Mr. Meyers was a member of the last senior class of the college, but owing to illness he had to go home before the examination. While he was in this city he was engaged at W. H. Gano's drugstore, 17th street and Columbia avenue.

Prof. Bastin is leading his band of botanists over green hills and into smiling valleys in this vicinity to become acquainted with its flora. Two excursions

have been made recently, and many interesting specimens of indigenous plants, some in flower, have been brought home for careful analysis.

Prof. Remington is at Longport on the New Jersey coast, where he has a cozy cottage. He is at work on the forthcoming new edition of his "Pharmacy." Prof. Trimble is also engaged in literary labor on his work on tannins, spending his time in his suburban home at St. Davids, near this city.

Frank E. Engeman has just purchased for J. V. Slaughter the drugstore at Sixth street and Germantown avenue. This store was formerly operated by Dr. E. Elsworth Wilson. He then bought for Dr. Wilson the store at 11th and Berks streets, which was conducted by A. S. Besore and owned by J. V. Slaughter. The store at Sixth street and Germantown avenue is to be run under the firm name of Slaughter & Besore.

Queen & Co. have recently made some considerable improvements in the Le Chatelier Pyrometer for the measurement of very high temperatures. These consist in the application of a new form of D'Arsonval Galvanometer, in which recently very great improvements have been made. A considerable part of the work formerly done at Queen & Co.'s laboratory at Ardmore, Pa., is now being performed at the Philadelphia factory. The increase of business in New York and vicinity has rendered necessary the establishment of a branch office in New York, which is now located at 116 Fulton street.

For the past week those interested in the study of botany have had a splendid opportunity to inspect the Martindale Herbarium recently presented to the college by the Smith, Kline and French Company and Howard B. French. An opening reception was held in the evening, which was attended by many men and women, who have contributed largely to the knowledge of the flora of many states. The guests were received by the members of the faculty, in the library and museum rooms of the institution. The handsome specimens were artistically arranged about the apartments so that a close inspection might be made. The display of ferns was one of the features of the exhibit.

The annual meeting of the Trade Association of Philadelphia Druggists was held on April 9. There were only three members present, including the secretary, Evan T. Ellis, and as the association is bound by no laws that require a quorum for the transaction of business, these three managed to get through with the routine work incidental to the annual meeting and the election of officers.

The secretary said that he was satisfied that all the old officers would accept a reelection, and the following were then unanimously elected: President Mahlon Kratz; Vice President, David Jamison; Secretary, Evan T. Ellis; Treasurer, William B. Thompson. Some discussion then followed over the next meeting, and as the attendance has been so slight at the regular monthly meetings it was decided to discontinue these and meet only at the call of the chair. It is probable that a meeting will not be held until some time in November next.

DETROIT.

Detroit, May 10.—The Pure Food Exposition, which opened at the Auditorium April 30, was of some interest to druggists from the fact that a few drug exhibits were made. Stevens & Todd, local retailers, had a nicely fitted up booth, wherein was a display principally of articles used at their soda fountains. The McK. & R. fruit juices, fruit pulp made expressly for their trade, extract of vanilla from Mexican beans, orange elder (free samples), distilled water by a new and perfected method, and free samples of several specialties made an instructive as well as attractive display. The Andrews Soap Co. of Cincinnati made a large show of Dairy Maid Complexion Soap, and samples were freely but discriminatingly distributed by J. C. Lillibridge, in charge. The local drug jobbers were represented by one firm.

Mr. H. J. Milburn has recently returned from a business trip to Kentucky.

The annual meeting of the Detroit Pharmaceutical Society will occur June 6. Nelson, Baker & Co. have about completed the two-story addition to their large plant.

E. F. Botum, the Southern Michigan representative of F. F. Ingram & Co., was in the city last week.

Dr. Beal, proprietor of the Union Drug Store, corner of Benton and Resard streets, has returned from his wedding trip.

B. Van Dembergh of Alma has recently enlarged his drug store by adding a line of groceries. He lately suffered a severe loss by fire.

D. E. Smith & Co. have opened a new store at 73 Grand River avenue. Dr. M. E. Knapp is a partner and has his office in the store.

A number of the Detroit drug houses were represented at the Pure Food Exhibit to be held at the Auditorium, which opened April 28.

Mr. Alex. Watson, who clerked for D. S. Hallock on Fort street for so many years, is suffering from an attack of neuralgia of the heart.

J. C. Moeller, located at the corner of Alfred and Russell streets, has sold out his entire stock and fixtures. The drug store will be run in the future by the late purchaser.

Mr. A. A. Newman, on Baker street, is now dispensing cooling drink from a new Tufts Congress stand. The stand is a very handsome one and is the only one of the kind in the city.

J. G. Hackney is moving his stock to No. 91 Grand River avenue, while his old store is being remodeled. He expects to again occupy his old quarters when the improvements are completed.

Farrand, Williams & Clark are now thoroughly settled in the old location of Farrand, Williams & Co., the store having been entirely remodeled to meet the requirements of their business.

J. C. Lillibridge has recently secured the resident agency for the Andrews Soap Co., of Cincinnati. He is an old traveling man, having represented Stearns & Co. in the Northwest for several years.

The lengthy newspaper ads. for C. H. Mitchell, the grocer druggist, have been very conspicuous by their absence of late. Possibly Mr. M. is not pleased with the recent action of the Detroit druggists.

The free distribution of several thousand bottles of Dr. Munyon's Remedies from the Detroit Journal office a week or two since has created a large demand for the goods, and some of the uptown druggists report quite large sales.

G. T. Kast has opened a new store at the corner of Sixth and Price streets. Mr. Kast learned the business while with W. H. Purdy, and was subsequently in the employ of J. J. Dodds & Co. until the dissolution of that firm.

Mr. O. E. Smith has purchased the stock of Chas. Morland, 719 Grand River avenue, and will continue the business at the same location. Mr. Smith came from Saginaw last Winter where he had been clerking for F. L. Klitenmacher.

The Detroit jobbers report an unusually large sale of tar camphor this season. The quality is very fine and the goods are being used for window displays with great success. E. C. Kinsel states that he sold about 75 pounds in four or five days as a result of his display.

Hurd & Gray have put the finishing touches to the work on their store, corner of Wilcox street and Woodward avenue. The improvements have cost them over \$1,500. The new space which they have added contains an additional stock amounting to over \$2,000.

A wonderful transformation scene has been going on at the old location of T. H. Hinchman & Sons where they burned out last Winter. The store has been entirely rebuilt and remodeled, and the firm expect to be again doing business at the old stand about June 15.

Henry Melchers, the well-known druggist of Saginaw, has been re-elected treasurer of that city. Mr. Melchers' numerous friends showed their appreciation of his former administration by re-electing him with a handsome majority, running him ahead of his ticket.

The Michigan Chemical Company which was lately formed consists of the following gentlemen as stockholders: E. C. Eccleston, of the drug house of T. H. Hinchman & Sons; W. Vhay and E. Vhay, of Dwyer & Vhay. The new firm will do a brokerage business in drugs, oils, etc.

The Committee of Associated Perfumers of this city have held several meetings within the past ten days, and the manufacturing pharmacists have appointed a committee whose efforts will be directed toward preventing legislation which will be detrimental to the industry.

E. B. Garrigues, representing Whitall, Tatum & Co., visited the jobbing trade a few days since. Other visitors to the trade within ten days past were Maulton, for Henry Allen, New York; Roberts, for A. M. Foster & Co., Chicago; Black, for Pfitzer & Co., New York; Griffith, for Herz & Frerichs, St. Louis.

Some time ago an indictment was brought against Williams, Davis, Brooks & Co. for violation of the regulations governing the shipment of acids. It seems bottles of nitric, sulphuric and hydrochloric acids were packed together in a sarsaparilla box and shipped by lake

steamer to a customer. One of the bottles broke and caused a small fire. On trial of the case the firm disclaimed any intent to violate the statutes, and attributed the act to the ignorance of an employee. Judge Swan assessed a fine of \$75 and costs.

The twenty-ninth annual meeting of the Michigan State Medical Society opened at Lansing May 3, with over 200 members present. The society authorized the president to appoint a committee of four to aid in securing from the next Legislature the enactment of a law to regulate the practice of medicine in the State, it being claimed that because of its laws Michigan is now a paradise for quacks and impostors. The following officers for the ensuing year were elected: President, H. O. Walker, Detroit; Vice-Presidents, V. C. Vaughn, Ann Arbor; C. H. White, Reed City; Mina Logue, Adrian; C. W. McKain, Vicksburg; Secretary, C. W. Hiltchcock, Detroit; Treasurer, W. G. Henry, Detroit; Members of Judicial Council, Fleming Carrow, Ann Arbor; Frank Garber, Muskegon; E. L. Shury, Detroit. The next annual meeting will be held at Bay City.

A. S. Rosenfield, on behalf of the Western Chemical Company, has commenced an action to secure an accounting from the Seely Manufacturing Company, claiming the latter has not lived up to its contract with the Western Chemical Company. He recites that the Western Chemical Company was formed by George H. Smith and Justin E. Smith of the Seely Manufacturing Company, and Mr. Rosenfield in January, 1890. The Smiths were to put in \$5,000, in the business and receive half of the profits and share half the loss. Rosenfield was to put in trade marks, formulas, patent rights and things of the kind, and the established trade of the Rosenfield Chemical Company, formerly of New York City, and have a half interest in the business. The two companies were to be separate concerns, although the Seely Company was to sell the manufactures of the Western Chemical Company, being allowed 20 per cent. commission. On the other hand, the Western Chemical Company was to purchase all of the supplies that it could of the Seely Company. Justin E. Smith was to take care of the financial end of the Western Chemical Company, sign checks, pay bills, etc. The Western Company was to allow the Seely Company 10 per cent. above the cost of manufacture. Mr. Rosenfield claims that the Seely Company has not given the Western Chemical Company credit for the profits on the goods the Western company sold through it. Besides the Seely company sold the goods in its own name, therefore the Western Chemical Company did not get the credit that should have come to it, through the excellent quality of the goods. The Seely company also insisted upon purchasing all of the goods used by the Western company in its own name, and the Western Chemical Company was therefore not able to secure a financial credit or standing.

The bill of complaint recites that Justin E. Smith has refused Mr. Rosenfield access to the books, and that he be forced to grant the privilege was one of the things asked for by Mr. Rosenfield.

CHICAGO.

HUGO W. C. MARTIN.

The Chicago College of Pharmacy has experienced a most severe loss in the death of Professor H. W. C. Martin, which occurred Sunday, April 23, after an illness of but a few days, from appendicitis. He was buried at Graceland with imposing Masonic rites on Wednesday, May 2. Professor Martin was born in Fond du Lac, Wis., March 8, 1833. In April, 1870, he came to Chicago and entered the retail drug business in the store of J. C. Huber, and followed this vocation to the time of his death. In 1873 he entered as a student at the Chicago College of Pharmacy, graduating two years later, during the time of his college work being employed by C. M. Weinberger. Then after a few changes he finally, August 13, 1879, secured for himself a store at the corner of State and Harrison streets, which he had ever since occupied, and where he built up a prosperous and remunerative business. Mr. Martin was always actively interested in pharmaceutical affairs, and held positions of prominence and honor in the associations of the trade. During five years of service as secretary of the Illinois Pharmaceutical Association he assisted materially in advancing several measures of great value to druggists and to the public. For five years he was secretary of the local druggists' association. In the College of Pharmacy he had served as vice-president, and for a few years past had been in charge of the department of dispensing pharmacy, in which capacity he proved an efficient and popular instructor. He was married in 1873 to Miss Lena E. Kirchner.

In recognition of their loss and as a slight measure of the esteem in which Professor Martin was held by them and of the depth of their sympathy for his immediate family, the faculty and officers of the Chicago College of Pharmacy passed appropriate resolutions May 4.

J. J. Magee, druggist, South Park, has purchased a large farm.

Kertz & Burdick succeed the late Frederick List at 277 State street.

Arthur M. Peck is now employed by Otto Coltzau, 2173 Archer avenue.

Peter Van Schaack & Sons have issued their new price current for 1894.

Arthur N. Peck is at present engaged with Otto Coltzau, 2173 Archer avenue.

Wood Browning of Indianapolis, Ind., is making a protracted stay in this city.

L. W. Lovet of Oak Park has been in the city making his usual calls.

George McDonald of Kalamazoo, Mich., spent a few days in the city recently.

Martin V. Creagan succeeds W. R. Parker, corner of Madison and Francisco streets.

Arthur Letourneau, manager for E. L. Caron, is the proud papa of a week-old daughter.

One of Feldkamp's stores on the north side was sold a few days since to the highest bidder.

Bodo U'endorf of Humiston, Keelling & Co. has been soliciting the city trade in their behalf.

K. A. Zurawski, Loomis and 48th streets, is about to have his store improved by the grading of the street.

Ashland Avenue Pharmacy is the name of a new store opened at 52d street and Ashland avenue.

E. J. Davis of Aurora, Ill., is in the city, expecting to locate in one of the prominent downtown stores.

Conrad & Co. have opened a pharmacy in the new Kenwood store, corner 4th street and Lake avenue.

L. C. McCabe & Co. are now doing business at the northwest corner of 45th street and Champlain avenue.

Soren Mathison & Co. have consolidated their two stores under the Louisville Pharmacy, 2126 Indiana avenue.

Hart & Welton of 64th street and Grace avenue are offering patent medicines at cut prices in this neighborhood.

W. G. Shaw, South Chicago, has been ill for several weeks. He is not improving as rapidly as his friends would wish.

W. R. Shaw of Commercial avenue, South Chicago, has experienced quite a severe illness, but is fast convalescing.

E. R. Newcome, Morrison, Plummer & Co.'s south side salesman, has been confined to his house on account of illness.

Thomas Burton, salesman for Morrison, Plummer & Co., has been in the city, and has again started on his regular trip.

Silver Pharmacy Co., successor to T. F. Wakefield, corner of State and Oak streets, occupies a very handsome store.

Professor N. Gray Bartlett has temporarily removed his stock to 117 East 22d street during the erection of his new building.

Thomas C. Ballard, with Morrison, Plummer & Co., has changed his residence from the north side to 3216 Jefferson avenue, Hyde Park.

A. B. Charbonnel is succeeded by O. F. Schmidt & Co., 31st street and Cottage Grove avenue. The store will be entirely refitted throughout.

J. T. Scheiderer of Peter Van Schaack & Sons has been awarded the fourth prize by The Era for a number of subscriptions for the present year.

C. L. Lindeman, Wentworth avenue and 31st street, is about to renew the front of his store by replacing the old with plate glass windows.

E. R. Wolfner, formerly located at the southeast corner of Clark and Polk streets, has removed to the opposite side of the former street.

F. C. Dean, formerly of Dean Brothers, San Francisco, passed through Chicago en route to Niles, Mich., where he joins his father in business.

Frank Gallbreth, with Robert Stevenson & Co., has changed his residence from Englewood to Ravenswood, in order to be near railroad facilities.

Hart & Weldow will establish a drug department in the new department store, State and Monroe streets, formerly occupied by Lyon, Healy & Co.

Oscar F. Betting, Van Buren street and Western avenue, is soon to open a new store corner Halsted and Jackson streets. His brother will be in charge.

Harry S. Lester, manager of Forrestville Pharmacy, has given up his position and gone to his parents' home in Salem, Ill., on account of his ill health.

Rhubenstein & Co., proprietors of the Economy Drug Store, 71st and Halsted streets, have just put in a new stock furnished by Morrison, Plummer & Co.

The Colbert Chemical Company is to open a downtown drug store in the old Stock Exchange Building, northeast corner of Dearborn and Monroe streets.

C. E. Baguley, North State street, has stored his stock and fixtures for the present. This move was occasioned by the high rental placed upon the old stand.

Frank A. Howard, proprietor of the pharmacy at the corner of State and 33d streets, was a former representative of the Waukesha Lithia Water Company.

G. G. Shauer, State and 23rd streets, has finished his Spring cleaning, having had his store repaired and freshly painted and a new sidewalk laid around the building.

J. J. Magee, 57th street and Lake avenue, has been taking a little vacation with his folks at Decatur, Ill., and has returned much refreshed and ready for hard work.

K. J. Thompson, 331 Webster avenue, is about to remove to the opposite corner building, where he will occupy a larger store room, with new fixtures and additional stock.

A committee appointed by the Retail Drug Association to investigate the Hayes plan met at the Schiller Building last week and decided to report against its practicability.

Morrison, Plummer & Co. state there is but little change to note in the condition of the drug market. Jobbers are fairly busy, but orders, as a rule, are confined to current wants.

William Dyche of State and Randolph streets certainly deserves great credit in carrying on such an extensive business so successfully. His younger brother is now studying medicine.

George Dunning & Co. have opened a new drug store on 22d street, opposite Dearborn. Mr. Dunning hails from Waterloo, Iowa, and is a Ph. G., '77, Chicago College of Pharmacy.

Dr. Arthur MacNeal, proprietor of the Berwyn Pharmaceutical Company, has been nominated one of the trustees of Cicero School District. Many ladies favored the doctor with their suffrages.

Tom Ballard of Morrison, Plummer & Co. is very proud of his new sundry department, and he has good reason for being proud, as it certainly is one of the finest displays in the West.

W. W. Swearingen, proprietor of the World's Fair Pharmacy, East 63d street, has closed up his business, stored

his stock and fixtures and removed his family from Woodlawn to Englewood.

Kertle & Dougherty, formerly of Zuber & Co., on Wentworth avenue, are about to start in business on the southeast corner of State and 51st street. In a store soon to be vacated by Stone & Co.

Mr Jerman, with Lord, Owen & Co., reports sales of complete drug store outfits to the following gentlemen: F. S. Torball & Co., Blue Island, Ill.; J. W. Clark, Centerville, Iowa; George W. Dixon, Colfax, Iowa.

Mr. Oughton of the Woodlawn Park Pharmacy, 63d and Madison streets, became a benedict on April 12. He married a Miss Shennan, a Chicago lady. They have started on their honeymoon trip South, their first stopping point being Louisville.

Messrs. Trilenens and Wert have purchased the Auditorium Pharmacy. Mr. Trilenens is a Western man, and was formerly manager of Buck & Rayner's store, 132 State street. Mr. Wert has been for many years with Fuller & Fuller Co. Both gentlemen are well known to the wholesale and retail trade.

John Conrad, Jackson and State streets Soren Mathison and the Elkin Drug Company have been having their show windows occupied by members of the "Seven Sutherland Sisters" family, with appropriate advertisements for their hair preparations, to the amusement and attraction of the public.

The baseball team for the coming season of Morrison, Plummer & Co. start in with H. H. Harper, first base; A. M. Daniels, catcher; Len Lange, pitcher; M. P. Jacobs, second base; W. Walsh, short stop; N. Roach, left fielder; William Wall, right fielder; C. B. Smith, centre fielder; H. Obrein, third base. They played a practice game last Saturday and came out on top.

Geo. A. Graves & Co., 35th street and South Park avenue, have been making valuable improvements from time to time in their store, now having a fine double soda apparatus, with a canopy top; plate cigar case, nickel-plate cash register, nicely decorated show windows, with Grecian urns and show jars, etc., the whole making a handsome appearance.

Jacob Hermann, corner Commercial avenue and 92d street, South Chicago, is having the front of his store repaired. Mr. Hermann makes complaint about most physicians in his neighborhood carrying and dispensing their own medicines. The doctors do not stop here, but when prescribing expensive drugs send the patients to the drug store misinformed regarding the probable cost of the prescription. Then there is trouble.

L. G. Flesher of the new firm of Flesher & Vandevender, Lexington, Ill., is in the city putting in a handsome and complete new stock of drugs. Mr. Flesher was formerly engaged in the drug trade at Lexington, but left that place some ten years ago for Nebraska, where he has been engaged as a dispenser of quinine. He returns to his early love. Mr. Flesher is a man of fixed habits. Having purchased goods of Lord, Owen & Co. in the past, he at once sought them out for a renewal of the acquaintance, favoring them with his order.

ST. LOUIS.

St. Louis, May 10.—There is a very material gain in the country demand for drugs, although it is not quite as active as it was last season at this time. Still, all things considered, it is quite satisfactory.

The health of the city this Spring has been exceptionally good, and the result has been felt in less than the ordinary volume of trade among the retail firms.

The St. Louis Drug Clerks' Society held its third annual election of officers Friday night, April 29, at the Mercantile Club, with the following result. S. E. Barber, president; George Waller, Jr., first vice-president; Max J. Schneider, second vice-president; Frank C. Garthoffner, treasurer; Otto F. Mack, secretary. A banquet followed, at which the guests of honor were Mayor Cyrus P. Walbridge, who is president of the Merrell Drug Company; Dr. Frank L. James, William Mittelbach, Booneville, Mo., president of the Missouri State Pharmaceutical Association; Gust J. Meyer of Meyer Bros.' Drug Company; William Graham, secretary and treasurer of the Daugherty-Crouch Drug Company. Letters of regret were received from John C. Park, M. D.; George K. Hopkins of the Hopkins-Weller Drug Company, and F. L. Kuenneke of the Moffitt-West Drug Company.

The following toasts were ably responded to: "The City of St. Louis," Mr. A. C. Meyer; "The Drug Clerk as a Member of the State Pharmaceutical Association," William Mittelbach; "The Pharmaceutical Press," Prof. H. M. Whelpley; "The Doctors and Apothecaries," William Graham; "The St. Louis Drug Clerks' Society," S. E. Barber, the president-elect. Plates were turned at the banquet for forty members.

The Committee of Arrangements were George Waller, Jr., Frank C. Garthoffner and S. E. Barber. The Reception Committee consisted of Charles F. Geiger, Wm. Wehrenbrecht and Alexander Smith.

The commencement exercises of the St. Louis College of Pharmacy were held the night of April 19, at the Memorial Hall, 19th street and Lucas place, in the presence of an audience that completely packed the big hall. During an overture by the orchestra the class of graduates, numbering fifty-three, headed by Prof. J. M. Good, dean of the college faculty, marched into the hall and took seats near the stage, on which were assembled the faculty of the college and members of the Board of Trustees. As the names of the candidates were read they came forward amid hearty applause, and received diplomas. When the name of Miss Martha I. Martin of East Prairie, Mo., was called by the secretary the applause was deafening. She was the only lady member of the graduating class, and is the second woman to be graduated by the college. The following is a list of those who were given diplomas: William A. Ackenhausen, William D. Auferheide, Adolph C. Bernsch, Emmett N. Boulward, Samuel V. Bracy, Henry L. Bramstedt, Charles R. Buren, Joseph H. Carmanns, Ferdinand Christmann, William A. Clark, Emil W. Dandt, William F. Diesbach, Theodore F.

Fienup, Adolph M. Finke, Otto F. Fischer, Rudolph F. Fischer, James H. Flippin, Herman J. H. Fraze, Oliver J. Funsch, H. M. Lee Godfrey, John M. Gray, Emil Grebe, John A. Guttmann, Clifford E. Henry, Pert A. Holloway, Madison C. Hugdick, Henry E. Klostermann, Frederick Koch, Charles W. Kozl, Edward O. Kuntz, William M. Laumann, Walter J. Le Saulnier, William Edward Le Saulnier, Fred William Luytles, Martha J. Martin, Fritz J. Mobbs, Arthur C. Newburger, Martin J. Noll, William Oldendorph, Ferdinand C. Pauley, James W. Peeler, William B. Pilkington, William A. Pinder, Frederick William Runde, Walter G. Schneider, Edward C. Schnttker, Charles W. Stockhausen, Charles D. Tomm, Charles William Tritschler, Emanuel J. Waldeck, Charles Witt, Gustav A. Woehrlin, Hiram W. Young.

The degrees were conferred by President Henry Braun. Dr. Otto A. Wall, professor of materia medica, delivered the valedictory on the part of the faculty, and Clifford E. Henry for the class. Chas. Alpins, president of the Alumni Association, presented the prizes of that association, and the college and faculty prizes were presented by Dr. Gustavus Hinrichs, professor of chemistry. William Mittelbach, president of the State Pharmaceutical Association, delivered the address. The alumni prize, a gold medal, was conferred on Emil Grebe of Freeburg, Ill., for passing the best examination in all branches. Edward O. Kuntz of Cuero, Tex., received the second prize, a handsome silver medal. Ferdinand Christmann of Waterloo, Ill., was awarded the prize offered by the Oldberg-Wall Laboratory for the best examination in pharmacognosy. Samuel V. Bracy of Hope, Ark., earned the prize given by J. M. Good, professor of pharmacy, for the best work in the Pharmaceutical Laboratory. Rudolph F. Fischer and Edward O. Kuntz received equal prizes for proficiency in practical pharmacy. Dr. Gustavus Hinrichs, professor of chemistry, awarded his prize to Walter J. Le Saulnier of Red Bud, Ill.

After the commencement exercises were concluded, the graduates, faculty and speakers of the evening enjoyed a banquet at Faust's.

The April dinner and meeting of the St. Louis Paint, Oil and Drug Club took place on the evening of the 19th. This being the last meeting of the season in which business could be transacted, it had been decided beforehand to devote it to the direct business interests of the club, and, therefore, no guests were invited. Nearly all of the members, however, were represented, and advantage was taken of the opportunity to insure the working of the club machinery in a more harmonious manner than ever. The several committees made satisfactory reports. The May meeting of the club will be held on Thursday evening, the 17th, and will be purely social, but informal. Some good speakers are expected to take part, and if any members of paint, oil and drug clubs in other cities are in St. Louis on that date and can put up with the same diet and treatment that the local members endure, they are cordially invited to attend.

S. S. Merrell has been elected treasurer of the Office Men's Club.

Edward Mallinckrodt, president of the Mallinckrodt Chemical Company, is back from a trip to the East.

H. C. Swift, a former pharmacist of Upper Alton, an Illinois suburb, has been defeated as a candidate for the post-mastership at that place.

Col. John S. Moffitt of the Moffitt-West Drug Company has entirely recovered from his recent sick spell.

Paul A. Day, one of the leading druggists at Sedalia, Mo., has passed safely through a severe attack of tonsillitis.

Mr. David Coons, president of the Provident Chemical Works, has returned from a business trip to southwest California.

Arrangements are being made for the annual convention of the Missouri State Pharmaceutical Association, which will meet at Excelsior Springs on June 12 and continue four days.

Dr. W. I. Palmer's drug store, a one-story frame building on Marshall avenue and Manchester road, was burned on Friday night, April 21, entailing a loss of \$1,000, which is covered by insurance.

At Conway, Mo., a couple of nights ago, the pharmacy of John M. Ragland was burned. The contents were entirely destroyed. The fire is thought to have been the work of an incendiary. Mr. Ragland will not rebuild. He carried only a light insurance.

At Russellville, Ark., on April 30, articles of incorporation were filed by the Weimer Drug Company. The incorporators are W. S. Fraser, W. E. Pruitt, R. U. Drummond and P. H. Earlow. The capital stock is \$150,000, of which \$75,000 has already been subscribed.

A telegram, May 7, from Topeka, Kan., says that the State Board of Health has called a meeting for May 15 to take action to drive out the patent nostrum venders who have overrun the State. There is no law on the statute books to punish them, but the Legislature will be memorialized to pass a law that will exclude them.

Henry Foote, an accountant in the office of Meyer Brothers' Drug Company, shot himself through the head, April 10, at the home of his brother, 440A West Belle place. Unrequited love is supposed to be the cause. He died two days after the shooting. Mr. Wm. Knight of the drug company speaks of Mr. Foote as the most exemplary young man he ever knew. Foote was 28 years old.

The annual election of the officers of the St. Louis College of Pharmacy was held on April 29, at the college, 2108-2110 Lucas avenue, with this result: Mayor Cyrus P. Walbridge, president; E. P. Walsh, vice-president; Solomon Boehm, treasurer; Dr. J. C. Falk, recording secretary; W. K. Ihardt, corresponding secretary; Board of Trustees, Chas. Aietner, H. W. Scheffer and Wm. C. Waldeck.

The pharmacists at Sedalia, Mo., are after Dr. Anselme, who is from St. Louis, and who is selling various kinds of medicines from a wagon on the public square. The drug dealers are indignant, and say that they pay a city license in their business and that outsiders should not be allowed to infringe on trade that belongs to them. The druggists say that the Mayor has no right to issue a permit to itinerant doctors to sell medicines on the public square.

BUFFALO.

Buffalo, May 10.—The event of the month in local drug circles, was the annual commencement of the University of Buffalo, of which the College of Pharmacy is a department. This took place at Music Hall on Tuesday evening, May 1, the great hall, the largest in the city, being crowded. The number of diplomas in the three departments were 61, of which 29 were in medicine, 26 in pharmacy and 6 in dentistry; the latter college being only two years old, and having a three years' course, the class is necessarily small. The change of the medical course to three years also reduces the size of the graduating class, while adding to the efficiency of the college. The pharmacy course remains at two years and is so satisfactory that no material change will be made next year. Chancellor E. C. Sprague was absent on account of illness, and the vice-chancellor, Dr. George S. Hazard, presided in his place.

Twenty-six students received diplomas. Their names are: Theodore V. Bauer, Edward E. Bickford, Emory H. Breckon, Birdsall Briggs, Archie I. Drake, M. D., Walter M. Goff, Edward B. Grove, Fred C. Haile, Arthur Lewis Hatch, George E. Hermann, Louis D. Hilligass, Calvin D. Jefferson, George H. Jones, Robert E. Jones, Hiram A. Kendall, M. D., Claude D. McAhon, Guy L. McCutcheon, John V. Murphy, Charles E. Noble, Earle H. Parker, Orren S. Salisbury, Charles St. John, Ray M. Stanley, Leslie R. Stryker, Edward Volk, Grace E. Wilcox.

Five of the class were also awarded honors for achieving the highest class standing in examination and in scholarship during their senior year. The happy recipients of this distinction are George Hartwell Jones of Randolph, N. Y., Frank Sanda of Cleveland, Ohio, George A. Heiser of Buffalo, Walter M. Goff of Howard, N. Y., and Claude Duval McAhon of Clermont, Pa. Messrs. George A. Heiser and Frank Sanda were among the twelve who were entitled to certificates of complete examinations, but who did not receive diplomas owing to their youth.

The following received certificates of completed examinations in pharmacy:

William G. Beachner, Oscar C. Diehl, Ernest J. Fraine, Orange Green, George A. Heiser, Alfred F. Kuhn, Lorenzo G. Nail, William A. Palmer, Frank Sanda, Henry Schick, Chauncey T. Simonds, Cora M. Smith.

These latter will receive diplomas on arriving at the required age or completing the required three years in a drug store. The college also conferred the honorary degree of graduate in pharmacy upon George Peabody, a retired city druggist who annually gives a prize to the best student in pharmacy. The winner of this prize this year is George H. Jones of Randolph, who took the junior prize last year.

The annual address to the graduates was delivered by Dr. Lucien Howe of this city, who spoke on the causes of failure, and made some wholesome suggestions of an exceedingly practical character.

The Alumni Association of the College of Pharmacy as usual took the day after commencement to itself. The morning session was devoted to election of officers

for the ensuing year and such other business as came before the association.

At the afternoon meeting the graduating class was welcomed by the president, William B. Reed, his address being responded to very ably by the class president, Mr. Guy L. McCutcheon. The papers and general discussion of various topics of interest to the pharmacist, which followed, were received with hearty approval.

The election resulted as follows: President, Fred S. Marsh, '89; First Vice-President, A. S. Felch, '91; Second Vice-President, Miss Grace E. Wilcox, '93; Third Vice-President, John Fuhrmeyer, '89; Secretary, E. J. Sanderson, '93; Treasurer, William H. J. Smith, '91.

The banquet at the Niagara was one of those pleasant affairs which have been a feature of the College of Pharmacy since its establishment. The Alumni Association is joined by the Erie County Pharmaceutical Association and the druggists of the city in general, and the occasion is in this way made a general reunion of the trade. The company that sat down numbered about 125, and was quite as representative as usual. President Anthony of the County Association presided jointly with President W. B. Reed of the Alumni Association.

It is exceedingly gratifying to learn that every member of the graduating class was provided with a position before commencement day, and there are applications on file at the college for more clerks.

For some reason the junior class did not stand the running fire of the examinations very well. Of the fifty examined eleven failed and five were conditioned in one study. The junior prize of \$25 was won by Edward Francis Kenney of Burton, Ohio.

The County Board of Pharmacy examined five candidates for licenses at the first May meeting. The following licenses were granted at that and the second April meeting: Pharmacists—Newell McDonald, Earl H. Parker, George E. Hermann; assistants—Oscar P. Diehl, Samuel R. Woods, Willard T. McElroy, H. C. V. Weichmiller, Charles Kelley, Henry T. Le Fevre.

There seems to be no improvement in the drug trade beyond the slight stir that always accompanies the opening of Spring. Custom is as capricious as a pretty woman. Some days it is fairly rushing and the druggist looks for something permanent, then it drops off again and there is a lull of several days. The scare over the city water is over, so that there is no further rush for mineral water, though doubtless some of that trade will remain permanent. The Health Commissioner has announced that the water has been purified of the evil effects of opening the water works tunnel so near shore as to contaminate it with sewage and all unseasonable.

The filter makers have made a fine thing of it, but it is to be feared that the city doctors have not come to an agreement on the question whether bacteria can be filtered out of water, though, as they seldom agree on anything if they can help it, the case is not an unusual one, and further delay may not be worth anything to science. Of course, there are plenty of people who are ready to say now that the

ware was without foundation and it is nonsense to pretend that the water had anything to do with the fever cases, besides, it gives the city a bad name and keeps people away. These wise ones should join an anti-vaccination society.

The cut-rate drug store that has been threatening the city trade appears not to be materializing. At one time there was a report that a certain big dry goods store was preparing to put in a line of patent medicines, and the County Pharmaceutical Association appointed a committee to labor with the proprietors. The latter were selfish and refused to meet the committee. Then two of the most ready of the committee were sent to the store and found no difficulty in getting an audience. The result was most satisfactory, and, though no positive promises were made, so far as can be learned there is now no fear that the store will go into the drug trade.

Not long ago it was charged that Buffalo was a large city, one of the few in the country with no manufacturing chemists. Whatever may have been true then is not true now. A year and a half ago the Maltbie Chemical Company established itself at 35 Washington street, and is making a large line of goods for the general trade. The Maltbie Brothers came here from Otto, Cattaraugus County, where one kept a drug store, the other being a student of chemistry. It is reported that a new chemical company is about to be established on Washington street.

Some druggists were examining the new excise blanks and noting the improved style of printing the application and the bond on one sheet, folder fashion. They read the solemn warning against selling liquor "in quantities less than five gallons, not to be drunk on the premises," and thought the wording was very happy. "You see, there is no provision against selling over five gallons, to be drunk on the premises," said one.

"But suppose the man who bought all that amount should break down and fail to drink it up?" inquired another.

"Well, in that case the druggist would be liable, of course."

The Collett drug store, which was established a year or two ago on Main street, below Seneca, has been moved to Vermont street.

The County Board of Pharmacy gave one of its bright candidates a bottle of yellowish liquid to make out. He spent considerable time on it, and then was told that it was mentioned on a certain page of the Pharmacopoeia, but he failed even then, and evidently suspected that some game was put up on him.

"Why," said the secretary, "I know a young clerk who can tell a compound made up from any ten bottles on the shelf and tell every ingredient right off-hand." "He is a good one," rejoined the young man, dryly. "They ought to make him a member of the board."

May is the month for re-registration. Every holder of a license must attend to it, or be barred from practice. As there is a fee attached to the registry, the clerks complain of it some, but they are satisfied that the law is a wholesome one and stand it. The County Board, which has this in charge, reports that there is no complaint of violations of the law under consideration now, so the pharmaceutical atmosphere may be set down as serene.

CLEVELAND.

Cleveland, May 8.—Hans A. Frasch, chemist, in the employ of the Grasselli Chemical Company, has recently patented a process of making concentrated nitric acid. Mr. Frasch has patented a number of improved processes and arts. Herman Frasch of the Frasch Process Soda Company has also become a prominent figure in chemical and pharmaceutical circles.

Changes in the retail drug business are going on at a lively rate. Dr. I. J. Kigelhaupt, the Clark avenue druggist, has sold out to Dr. James F. Armstrong; Joseph J. Schantz, 2318 Broadway, has been succeeded by Eugene A. Spenser of P. I. Spenser's pharmacy, 370 Central avenue; Tod Howard, assistant to C. F. Fen-ton, has purchased the pharmacy of Chas. B. Wood, 693 Cedar avenue. Prior to his venture, Wood was an assistant chemist in the employ of Strong, Cobb & Co. There are a number of changes on the tapis, but owing to the dubious aspect of the times deals are slowly consummated.

Lewis C. Hopp's narration of his New York sights and adventures is being read with great gusto, but it will cost Mr. Hopp many a "smile" before he will succeed in reconciling all things, separately and collectively. When George Hechler met him on one of his daily downtown pleasure trips, the following colloquy ensued:

"Lewis, you are a brick; without you we might as well go to sleep. But it took New York to proclaim you as a Cleveland prophet. Bully for The Era! Hurrah for The Era! Lewis, here's a nice place; let's go in and have one on it."

"Thank you, George; I am glad you do not deprecate the compliment The Era paid me in selecting me as the Robinson Crusoe redivivus of the drug trade. I am envied and spiteful things have been said about me. But d— the soreheads, and hurrah for The Era! Fill 'r up again. Now for Cincinnati! Let's all go and be brotherly!"

"And are there any sights in Cincinnati, Lewis?"

"George, you dear, innocent baby; Cincinnati—and no sights? Just save up the extra 100 per cent, you make on cork legs, bandages and the like, and I'll show you anything between 'Over the Rhine' and Mrs. Rooney, the monkey intriguante of the Zoo, when you have tired of the civilized sights 'below the Rhine.'"

Admiring groups of passers-by are hourly seen in front of Meyer & Glem's Cuyahoga Block store, being attracted by the interesting window displays, the freshest and most elaborate in town. Does it pay? The proprietors say so, and I can in part verify their statement; for recently I took the pains to watch that slight-seeing crowd from an opportune point. Of 110 persons attracted to the windows twenty-four entered the store and either priced or bought of the articles exhibited. Later, calling at the store, I ascertained that the sponge trade had been exceptionally brisk all afternoon, and sponges were the main attractions in one of the windows. Some of the downtown stores which pay some attention to window dressing in a modernized sense of the word are Meyer & Glem's City Hall Pharmacy, A. F. May & Co., Gem Pharmacy, Euclid Avenue Phar-

macy, It. Parsons, Son & Co., Mayell Hopp Co., Heller & Gouvy, Julius W. Deutsch, Marshall & Co., Loewe Apothek, Marshall's and Gaylor's. There are others with evident ambition, but they overdo themselves in the attempt. A promiscuous exhibit of all sorts of wares and merchandise is bad taste, and of problematical value only. With all the spare time that clerks have at their disposition now a great deal more ought to be accomplished. To accomplish anything at all, show windows must be reconstructed in the first place. The expense is worth undergoing, for good trade inducements are always connected with expense.

The Stecher pharmacy is one of the best paying on the West Side.

Retailers are kicking at wholesale selling to persons outside the trade at wholesale prices.

S. M. Strong has been chosen a member of the Committee on Municipal Law of the Chamber of Commerce.

Michael Gerstacker, corner Fulton and Lorain streets, is able to be about again. Bright's disease is his complaint.

The soda trade has started in with the usual boom of feminine enthusiasm. There is no hard-time abnegation in front of the soda fountain.

Bangs' local manager says new drug store enterprises are plentiful, despite the hard times, and with every year better and more artistic fixtures come into demand.

Munyon's advertisers and samples are in the city. The newspapers are in clover, and so are the free sample fiends. Munyon, the Wanamaker of the drug trade, is reaping the harvest.

Franz Kelper will probably open a drug store in the near future "on his own hook." Mr. Kelper has many years of Cleveland and Chicago experience, and is a "literary" pharmacist besides.

The new firm of Feuer & Aubley, Case and Payne avenues, are doing well. They understood the characteristics of the neighborhood, their Broadway experience having fully acquainted them with all trying foreignisms.

"I do not expect a live trade in fly paper this season," mused Henry W. Stecher, he well-known "Stick 'em Fast" manufacturer, "and shall not make any special efforts in getting beyond a safe share of trade."

There is a woman forger in town, and she is in the habit of using drug-store telephones in calling up messengers, whom she uses as tools. Some drug clerk may earn a reputation as a sleuth by discovering her identity.

Style is wanted in the most unpretentious country town, and a luxurious array will find quicker takers than sober or primitive designs. The Cleveland Store Fixture Company and other outfitters are of practically the same opinion.

Charles M. Miller of the Malto Manufacturing Company is Spring spry after the trade, and intends to even more popularize the Malto drink this Summer. Mr. Miller is an old pharmacist, having been formerly established at Mansfield, and is very adept in compounding extracts for carbonators.

At the May meeting of the Cleveland Pharmaceutical Association it was decided to attend in a body the meeting of

the Ohio State Pharmaceutical Association, which will be held in Cincinnati on June 5, 6 and 7, as per new arrangement. All non-members will be welcome if they desire to join the party, and notices will be sent out to that effect.

In a recent essay from the pen of a local chemist there appeared this sentence: "Cleveland is the chemist's paradise. "Is that to be taken in an aesthetic or material sense? Anyway, Cleveland has produced some of the best chemists in the country, and the chemical laboratory of the Case School of Applied Science is one of the best in the world.

Already the life-enjoying members of the fraternity are planning Summer amusements. Lewis C. Hopp has given a strong incentive to New York trips, and the probable dull term will decide many to take a protracted outing, far away from the weary cares of up-to-date business, to gather new courage. The Cincinnati excursion in June will start the exodus.

The monopolistic Cigarette Tax bill, which is being urged for final passage, would effectually concentrate the cigarette traffic. It would reduce the dealers in numbers, but manifold their sales. Druggists will probably do the bulk of the retail business at the doubled prices. A large percentage of the trade would no doubt be diverted to neighboring States where cigarettes can be had at the old prices.

The substitute for the Abbott Pharmacy bill, which passed the Senate, provides that an assistant pharmacist of five years' experience, a physician of five years' practice, who for five years has been proprietor or personal manager of a drug store, shall be entitled to be registered as a pharmacist without examination. This was amended by a clause providing that any time spent in study in a school of pharmacy shall count as part of the five years' experience or practice.

Trade in the outer districts is still lacking animation and the perennial dull period is close at hand, too. Pessimists promise even worse times for this Summer than last. They base their prognostications on the continued inactivity and strikes in the iron and cognate industries on which Cleveland's working classes mainly subsist. The business center stores, while noticing the demoralization of the working class trade, are satisfied with what is to be picked up in the general run of business. Economy has become a habit with a great many people, and that counts, too.

The female drug clerk is one of the coming trade problems. She is growing in favor with the profession, and vice versa. Thus she may soon be more than a mere ornament or trade magnet. The matriculation sheets of the pharmaceutical schools in Ohio, and also examination reports, show an increased female percentage with every term, and it is evident that the profession must give the women "encroachers" enough encouragement to practically familiarize them with every detail and make their mission what it should be. Encourage modern woman and her ambition will generally accomplish the rest.

CINCINNATI.

Cincinnati, May 8.—Since the last edition of The Era the Ohio lawmakers have been juggling the Abbott and Stillwell bills. The first named measure was handed without gloves in The Era a short time ago. The measure is fathered by Senator Abbott of Morgan County, whose ideas of the requirements for running a retail pharmacy are, to say the least, very vague. Then again, in the language of the street, it might be that the Senator cares little about pill making and ointment mixing. His pet bill, to allow any one to become a registered pharmacist who has had five years' experience in a drug store, it is said, was framed to please one of his constituents, who had failed to pass an examination before the Ohio Board of Pharmacy. Invidious persons, who claim to know a thing or two about our lawframers at Columbus, have said that the author of this iniquitous bit of legislation might have been influenced in various ways to take the position he has. There hasn't been a bill brought before the Legislature in the past ten years which was characterized with the patent injustice of the measure in question, and the druggists in all parts of the State are justly incensed. Meetings have been held in all of the northern towns and cities, protesting against its passage, but, notwithstanding this, the bill is likely to become a law. When the bill came up in the Senate there was quite a flurry among the members of that august body. It is claimed that votes were traded right and left, and the bill was finally passed by an overwhelming majority. When it was learned in this city that the bill had passed the Senate, a meeting of local druggists was held in the Smith Building, and Mr. John Byrne of Columbus, as a representative of the Ohio Pharmaceutical Association, was present and spoke at length about what would have to be done to prevent the bill passing the House. Mr. Byrne stated in open meeting that \$300 would have prevented the measure coming before the Senate at all, and urged the druggists to start a subscription paper and solicit funds. The idea was taken up and the following gentlemen acted as a committee: John Weyer, Albert Wetterstrom, Charles Fleber, John C. Otis, J. F. Kutchbauch and Louis Klayer. The following day about fifty druggists attended the called meeting at the College of Pharmacy Building, and about \$500 was raised to antagonize the hobby of Senator Abbott. Resolutions were also adopted, requesting the Hamilton County delegation to vote against the measure. Despite the action of the local druggists and their "pill-rolling" brethren throughout the State, when the bill came up in the House it was recommended for passage. It was placed on the calendar, however, and there it is likely to remain for some months.

Apropos of this unjust law, it might be well to publish what some of the leading druggists said about the measure to The Era correspondent:

"The Abbott bill is the work of one man," said Dr. John C. Otis. "Senator Abbott evidently has some friend or relative, who has been unable to pass the examination before the State Board. The bill

provides that after a drug clerk has worked at the business for five years he may be given a license and certificate to practice, without examination. A mere child could see the results of such a law. In a very short time the State would be filled with practicing pharmacists, armed with certificates from the State Board, who would know almost less than nothing about mixing drugs for the public. The bill is an outrage on the people of the State, and is extremely dangerous. The law as it stands is an excellent one, and should be left alone."

Said Mr. Wilmot J. Hall: "Of course, I am against the Abbott bill, for the simple reason that its passage would result seriously to public safety. No one should be allowed to mix drugs for public use who has not passed an examination showing that he is fit to do so."

"Every drug clerk or practicing druggist should be required to pass an examination," said Dr. R. C. Weatherhead. "Mixing drugs is a serious business, and only good men should be allowed to do it out of protection to the public."

The Stillwell bill, which provides that all druggists must pay an annual tax of \$50 for using intoxicating liquors in their business and selling the same, is also pending. The pharmacists are also against the passage of this bill.

John Gray of Richmond, Va., entered the drug store of Henry Gilbert of Lockland the other morning, and, under the pretense of illness, tried to get enough poison to end his miserable existence. Foiled in his first attempt he made repeated pleas for enough laudanum to accomplish the deed. All of his pleading was of no avail. Later in the day it was ascertained that the poor fellow tried the same trick at a drug store in Wyoming, and met with like ill success. Gray claimed to be a coal miner, last employed at Fairmount, W. Va., and driven out of employment by a strike in the coal mines there.

Druggist Ed Gray is on the mend.

The slot machines, like Coxe's army, are on the move.

George Kylius wants to purchase a couple of farms near the city.

Sam Vollman, the ubiquitous sponge vender, was in town last week.

Warm weather has made a boom in the soda water trade in this city.

Fred Kisker, formerly a Fairmount druggist, is clerking for Otis & Co.

Druggist Frank Kautz's two stores were attacked by the Sheriff one day last week.

Harry Gradel is going to open a bang-up drug store out in aristocratic Coryville.

John Keeshan, the veteran pharmacist, is now an adherent of dumb-bell practice.

Edward P. Dehner has been giving his drug store a painting, internally and externally.

Madam Rumor has it that a new pharmacy will be opened in Mount Auburn soon.

Several carboys of nitric acid belonging to the Grasselli Chemical Company exploded recently.

Andy Bain was busy last week appraising two drug stores, which went to the wall because of hard times.

Edward Martin, pharmacist at the National Military Home at Dayton, was in town calling on his friends last week.

Benny Isaacs, the Ohio man for Sharp & Dohme, was mingling with friends here this week, talking pills, tablets and the like.

All the local druggists report business picking up—like the rag business. Eastern drummers are all faring well here now.

Tia rumored that John F. Haynes, formerly of this city, but now with Lehn & Fink at New York, will soon become a benedict.

Joseph Durham, who formerly had charge of Hoover's pharmacy in Central avenue, has just returned from a trip to San Francisco.

John Bauer, at Sycamore and Milton streets, is now the proud possessor of a parrot, and it keeps John busy trying to teach his pet not to talk so much.

Ever since Ed Voss, the druggist at 12th and Vine streets, got married he has remained considerably longer at his meals. We suppose it's the same the world over.

Dr. R. H. Weatherhead has just purchased a large lot of potted plants to use in decorating his store. He has also moved his office to the rear of his store.

Among the candidates for special inspectors of drugs at the Custom House are Joseph Hall, Edward Dehner and R. J. Pardick. The matter will probably be settled next week.

Most of the local drug clerks are now fixing matters so they can get two afternoons off each week during the heated season. The baseball season may account for their actions. Outdoor concerts may also be the cause.

Wilmot J. Hall has "discovered" a new drink, which he is dispensing at his soda fountain, and which he has christened "Ambrosia." Several well-known citizens of this city have partaken of ambrosia and they all say it is all right.

Jason Evans allows himself to go on record as the only prominent downtown druggist who favors the passage of the Abbott bill. Mr. Evans has been quoted as saying that he thought the Ohio Board of Pharmacy had been guilty of showing too much favoritism.

W. L. Elgin for the past five years a traveling salesman in Texas for H. W. Williams & Co., wholesale druggists, was in the city last week. While here Mr. Elgin accepted the State agency for the goods of the William S. Merrell Chemical Company in Texas.

As the People's Theatre closes in two weeks, Druggist Herman, at Thirteenth and Vine streets, is accordingly disconsolate. He has been doing a land office business in grease paints and other stage make-up, and cannot be blamed for the feeling he cherishes.

Lloyd Bros., the wholesale druggists at Court and Plum streets, have received a permit to erect a large four-story laboratory at Mound and Elizabeth streets. The estimated cost of the structure will be \$8,000. Ashley Lloyd, of this firm, is treasurer of the Cincinnati Baseball Club.

The Ohio State Board of Health met in this city on April 27, at the Burnet House. The possibility of an invasion of cholera being the coming summer and quarantine regu-

lations were among the subjects discussed. Dr. Probst made a lengthy address on consumption and the way it should be treated.

Will Wagner, at Weatherhead's got hold of an order for some liniment the other day which looked as though it might have been written by some of the hobos in Coxe's Army. The order called for one ounce each of piperolol, sweet oil, romifex, sperets turpentine and one-half pint of alcohol.

The inquest on William Arons, the book-keeper for the Standard Drug Company, whose body was found in the Clifton Canal basin on March 21, was concluded a few days ago. President Calvert of the Standard Drug Company testified that the last time he saw Arons alive was when the board held a meeting and decided to examine his accounts. This was done, and several stockholders were not satisfied with the way Arons kept his books. The verdict was: "Drowned in the Miami Canal." The death strongly points to suicide.

INDIANAPOLIS.

J. W. Danhour of Clay City is a benedict now.

A. F. Sala & Co. is a new firm at Summitville.

Al Bussell has bought the Archibald store at Laesburg.

Allen & Layton, Covington, are succeeded by Allen & Rice.

James Heffernan of Anderson has charge of Good & Co.'s store at Richmond. Frank Steele of Knightstown has taken unto himself as partner (life) Miss Carrie Hodson of Ogden.

W. L. Dobyns & Co. are successors to Rogers & Dobyns, Greensburg. Mr. Rogers was appointed postmaster.

John E. Wakefield, formerly clerk for J. F. Johnson, this city, is in business for himself at the old Adams store in Sharpsville.

Two young sons of Fred Schaefer of Berne, Ind., ate some cyanide of potassium, which had been purchased to polish brass. Both boys died in a few minutes.

Coleman & Patterson is a new firm of enterprising druggists in West Indianapolis. Lichty & Hall of the same city have dissolved partnership, Mr. Hall retaining the business.

The soda season has opened briskly here. There has been a continual stream of patrons after the unexcelled ice-cream soda which the leading druggists of Indianapolis dispense.

Grover, Hazelrigg & Bonner of Greensburg are putting on metropolitan airs, and have put in a handsome soda fountain, electric fans and other high-toned accompaniments.

A. C. Bates, a pioneer druggist of Rockville, died at the Montezuma sanitarium on the 1st inst. He was in the drug business at his home since 1861 and was well known throughout Western Indiana.

Ben Webb, the traveling salesman for A. Kiefer & Co., who drew a \$75,000 prize from the lottery some months ago, has retired temporarily from active business. At present he is doing the Midwinter Fair.

Both wholesalers and retailers express themselves as satisfied with the state of trade. It compares very favorably, they

say, with the Spring business of years that have had a better reputation for general prosperity.

The city police surgeon found one of the station house lodgers suffering from smallpox. He was isolated on the City Hospital grounds, and the health authorities have ordered everybody in the city and suburbs to be vaccinated, if they have not been within seven years.

The druggists of Elwood have organized a pharmaceutical association for mutual protection and the regulation of prices on many articles, including patent medicines, which have been selling at cut prices. The association will also regulate Sunday closing. All the Elwood druggists are members.

The two Indianapolis fasters, Joe Kinsley and Ashley Fields, did not hold out long at Bourbon. Beginning at 9 o'clock on the morning of the 1st inst., they had neither sleep nor food until the morning of the 7th, when physicians advised Fields to give up and ordered a bowl of mush and milk for him. He had lost thirty pounds and Kinsley twenty-three pounds.

"Billy" Schmidt, who recently retired from the position of manager for A. Kiefer & Co. in order to make the race for County Treasurer on the Republican ticket, went through with a burrah at the convention—and a nomination at a Republican convention is considered an election in this year of our Lord. Mr. Schmidt is a native Hoosier and is a comparatively young man to have risen to the business and political eminence he has. He started in at Kiefer's as errand boy and rose to be a partner and manager.

The commencement exercises of the School of Pharmacy of Purdue University were held on April 10. It was the ninth class and numbered thirty-seven. O. E. Dunn, the class orator, spoke on "Pharmacy, the Student." J. K. Lilly of Indianapolis addressed the class on "The relation of Pharmacy to the Druggist." Dr. H. B. Osborn of Kalamazoo, Mich., on "The Relation of the School of Pharmacy to the Medical Profession," and Col. R. P. Dettart of Lafayette on "The Relation of Pharmacy to the Law." The following is the list of the graduates: C. H. Abersmeyer, Fort Wayne; W. N. Arnett, Fortville; F. R. Bass, Mooresville; H. S. Best, Brookville; Daily Bland, Worthington; F. J. Boatman, Indianapolis; Harvey A. Berkley, South Bend; A. M. Carter, Harrison, Tenn.; George A. Clapsatt, Fort Wayne; George C. Cullom, Frankfort; E. E. Downey, Rochester; O. E. Dunn, Milwaukee, Wis.; F. H. Flangner, New Richmond; Mabel E. Fleming, Princeton; W. H. Fox, Three Rivers, Mich.; O. F. Grahl, Fort Wayne; N. H. Harding, Osgood; L. C. Hinchman, Rushville; H. C. James and William F. Kirkhoff, Lafayette; John H. Kueale, Montmorenci; C. O. Maple, Indianapolis; A. M. Marsh, Sackett's Harbor, N. Y.; Thomas B. Marshall, Butler, Ga.; H. M. Mehlig, Tipton; P. M. Murphy, Whitcomb; G. A. Petersdorf, Knightstown; Conrad Schraeder, Shelbyville; O. W. Stephenson, Livonia; F. A. Stockes, Rockville; G. H. Stoller, Mansfield, Ill.; W. M. Ticen, Colfax; E. C. Tinsley, Indianapolis; Alva I. Ulrich, Three Rivers, Mich.; George W. Haines, Ora C. Kennon and J. D. King.

SETH TALCOTT.

SETH TALCOTT, senior member of the firm of Talcott, Frisbie & Co., Hartford, Ct., on Asylum street, died at his home, on the corner of Asylum avenue and Sigourney street, on the afternoon of April 16 at half-past 1. The cause of death was a general wearing away and debility. Mr. Talcott's condition had been serious for the last few days, and the morning of the day of his death his physician, Dr. Porter, knew that there was no hope for him, and that it was only a question of a few hours. Mr. Talcott had been an invalid for the past three years, during which time he had done no business, but sought to recover his health. He had suffered two strokes, one of which it was thought he would not survive. A particularly sad feature of his death is the absence in Europe of two of his sons, Allen Butler and Edward C. Talcott, and also his partner, Mr. Edward C. Fristie. His son, Charles Hooker, his niece, Alice Bulkley, and Mrs. Talcott constituted the immediate family since the departure of the two sons.

Mr. Talcott was born in West Hartford, at the old family homestead, and was 64 years of age. He commenced his life as a druggist, when a lad of 14, with Harvey Seymour, with whom he stayed until he was 20. At that time he joined his brother, George, who was completing an academic course at Yale College. He remained a year at Yale, and attended many courses of lectures. Returning to Hartford in 1851 he bought out a drug store on Main street, and founded his wholesale drug business, under the firm name of Seth Talcott. A few years later the firm became Talcott & Fuller. This partnership lasted but a short time, when his brother, George Talcott, then a lawyer, bought out Fuller's interest. The firm name became Talcott Brothers. This firm continued business until the Spring of 1871, when Mr. George Talcott died suddenly on his wedding trip, just as the present building, which the firm occupies on Asylum street, was being finished. At Mr. George Talcott's death the firm became Talcott & Co., and continued under that name until 1883, when E. C. Frisbie was admitted, the

name of the firm being changed to Talcott, Frisbie & Co.

Mr. Talcott was twice married, his first wife being a Miss Corning, by whom there was one child, Minnie. She married H. Page Guyton of New York, but died a few years ago. Mr. Talcott's second wife was Sarah Allen of Longmeadow. Three sons were born to them—Allen B. Talcott, the artist; Charles H. Talcott, in his father's store, and Edward C. Talcott, with the Jewell Belting Company. Mr. Talcott leaves a brother, John B., in New Britain, and another brother in the commission business in New York. His brother, George, is dead.

Mr. Talcott was a member and constant attendant of the Asylum Hill Church. Formerly he was a member of the Centre Church. He was cultivated in his tastes, unassuming in his manners and strict in his integrity. His business sagacity is shown in the extent of the wholesale drug business which he built up. With the employees of the store he was nothing if not kind and considerate, and his home life was of the happiest.

TRADE COMMENT.

Hurray! America is exporting sugar of milk. London and Hamburg are inquiring for it.

Dr. C. E. Teel & Co. was incorporated on March 8, at Tacoma, Wash., with capital of \$10,000 for the manufacture of proprietary remedies.

Bichromate of potassium was the poison selected by a servant girl in England to ease her way to the great beyond. But it didn't, for she suffered horrible agony for twelve hours before death.

An enterprising Cuban cigar manufacturer is now putting up his finest goods in hermetically sealed glass tubes, thus preserving the cigars in the same condition in which they leave the factory for an indefinite period.

An Ohio woman answered an advertisement recently, which promised to give a satisfactory recipe for making coffee. The reply was: "Practice until you get it exactly right, then keep on making it that way."

A special exhibition of the bill-poster's art is now in progress at Brussels. A large building has been devoted to the purpose, and even with an admission fee, the enterprise is drawing as large crowds as do the usual art exhibitions.

The 300 or more Chinamen engaged in the opium trade at Victoria, B. C., are said to be considerably alarmed over the prospect of a reduction of the tariff on their manufacture, should the Wilson bill become a law. As large quantities are smuggled into the United States on account of the high duty, a removal of the latter will render the Victoria manufacturers unable to compete with their brethren in Hong Kong.

In the other form of advertising in which the French excel—window display—"their native art faculty also comes into play," says a writer in *Printers' Ink*. "Not that the largest stores are superior to ours in multiplicity and attractiveness of form, but it is the attention paid to window dressing among the smaller shops that makes a walk along a Parisian street a delight. I have often been brought to a standstill before a small hardware or butcher's shop by the eye-catching quality of its window arrangement. We might well copy the methods by which the French insure light and attractiveness to their shops. The whole front is usually of glass, with only the barest skeleton of iron or wood as the necessary framework. Narrow strips of mirror are frequently placed down the window sides, or across the bottom and top, and facing outward so that the passer-by sees himself reflected in them. Mirrors are even used to cover the upper and lower framework of the window. The effect of all this glass is gay and inviting to a degree. At night, artificial lights are used lavishly, and one is continually being tempted to buy things he does not need because they are so attractively brought to his attention. Surely this is the acme of the advertiser's art."

A ten-foot high advertising picture, representing President Carnot and a lady, evidently intended for Mme. Carnot, slipping with gusto a new Algerian brandy, has been posted throughout France. As soon as it appeared the Government ordered that a piece of colored canvas be pasted over the two heads, otherwise the advertisement was allowed to stand. In consequence of the Government's action it has proved a bigger advertisement than was ever anticipated. Profitable Advertising.

The Sugar Drug Company of Duluth, Minn., had a formal opening of their wholesale drug business at their new building, 25 and 27 Fifth avenue, west, on Thursday evening, April 13, to which all their friends were invited. From their excellent geographical position and ample shipping facilities, both by rail and lake, together with their new and commodious quarters, the new firm is justified in asking for a liberal portion of the ever-increasing jobbing business of the Northwest. The management of the various departments of their business is in the hands of men who are fully acquainted with the needs of the retail trade, and among them are Nelson P. Snow, late of McKesson & Robbins, New York; Charles S. England, late of Strong, Cobb & Co., Cleveland, and Professor W. H. Mosher of Buffalo, N. Y., in charge of the firm's laboratory.

A German claims to have discovered a new method of doctoring cigars, and it is thus described in a trade paper: "The invention consists of an almost colorless fluid, with which a portion of the tobacco to be used, especially the wrappers, is moistened. The effect is immediate and lasting. The cigars burn better, and taste and smell are so improved that they satisfy the requirements of an epicure. This was proved, we hear, in the presence of a large number of smokers and experts. The inventor's method of convincing any one is simple and effective. He begs for a cigar of low quality, pours several drops of the fluid on the table or on a plate, turns the cigar around several times in the fluid and offers it to some one to smoke as soon as the outside is dry. The color of the tobacco undergoes no change." What wonderful inventors these Germans are, and what wonderful things they will believe.

Michigan stands second on the list of States in the output and valuation of its mineral waters for the year 1893, being only exceeded by Wisconsin, the latter producing 5,705,212 gallons, valued at \$562,703, and the former 610,500 gallons, valued at \$174,222. Statistics given in a special report of the United States Geological Survey show that the list of waters used commercially during 1893 is the largest on record. The total number of springs was 328, an increase of forty-five over the previous year. The total production was 23,544,495 gallons, at a valuation of \$1,246,734. This is an increase of 1,677,831 gallons, but a decrease of \$639,226 in the value over last year. The average price per gallon was 13 cents, against 22.1 cents for 1892. The list of waters used commercially shows a net gain of twenty-

five in the North Atlantic States, a gain of four and a loss of one in the South Atlantic, a gain of fourteen and a loss of five in the North Central, a gain of three in the South Central and a net gain of five in the Western States and Territories. The decrease in production in this section is 589,412 gallons, and in value, \$286,846.

COOL STORAGE AND COGNAC. The gifts of science to commerce are incalculable, and are ever receiving fresh additions. The latest example is interesting, in its way, because it seems to be the practical first fruits of those elaborate experiments in very low temperatures which Rioulet initiated and Dewar has followed up. It relates to the formation of cognac. Connoisseurs dream with envy of those exquisite fine champagnes for which the industrious fathers of the Grande Chartreuse are famous. The fathers, being men of means, can afford to do what very few firms care to—namely, lock up capital in large quantities of the best eau de vie for ten years at a time. This protracted storage in cool vaults results in the perfect cognac with inimitable bouquet. Inimitable hitherto, Rioulet has, however, tried cooling eau de vie by progressive stages down to a temperature is low as 20 degrees C. At this point the alcohol becomes buttery and semi-crystalline in substance. Upon being restored once more to its normal temperature, the fluid is found to have acquired the bouquet of fine champagne of ten years' growth. The expense is insignificant compared with the result—not more than a quarter or half a franc per litre.

An Italian college of vinology, at Avellino, has submitted samples of home-produced brandy to M. Pictet for test, and the results, published as yet without analysis, are very promising. Our knowledge of alcohol is still imperfect, and the constitution of brandy, according to an expert in *Cosmos*, is very complex, including, besides ethylic alcohol, certain higher alcohols in small quantities, aldehydes, acids (esp. acetic), glycerine, introduced by the hydro-alcoholic vapors during distillation, coloring and aromatic matters, especially vaniline. Possibly it is the accelerated transformation of the aldehydes and acids that produces the peculiar bouquet.—*Pall Mall Gazette*.

RULES FOR A FIRST-CLASS DRUG STORE.

The following rules, contributed by one of The Era's readers, seem to be quite appropriate for the perusal of certain patrons with whom every druggist has more or less acquaintance:

- (1) Hours for solicitation of church subscriptions, etc., from 11 a. m. to 1 p. m. Book agents entertained from 1 p. m. until 3 p. m. Advertising agents recognized at all hours of the day.
- (2) Gentlemen are requested to congregate behind prescription counter and engage in conversation with the clerk while filling prescriptions.
- (3) Persons making social calls should remain as long as possible. Daily papers and magazines furnished upon application to the cashier.
- (4) Gentlemen are requested to arrange themselves comfortably in chairs against

the walls. This will help sustain the walls and may prevent them from falling upon us.

(5) Gentlemen are requested to smoke. Pipes, tobacco and cigarettes furnished.

(6) Expectorate upon the floor. Our cuspidors are intended for ornaments.

(7) Talk loud or whistle, especially when we are filling prescriptions. If such actions do not appear to rattle us, sing.

(8) Profane language expected at all times, especially if ladies are present.

(9) Put your feet upon the desk or lean against prescription desk; it will be of great assistance to persons engaged in writing.

(10) Do not neglect sampling colognes, etc., as manufacturers have placed them with us for that purpose.

(11) On entering the store, make yourself at home. Be sure to help yourself to anything you want. Pay no attention to clerks. They are employed to occupy space only.

(12) Do not wipe your feet before entering the store; it spoils the mat.

CROTALUS HORRIDUS.

There are difficulties enough in the pathway of the ordinary pharmacist, but they are nothing compared with those which he who makes a speciality of homeopathy must encounter if the operations described in a recent number of the Boston Medical and Surgical Journal are very frequent:

"The following description of the initial steps in the securing and preparing of the 'mother tincture of crotalus horridus' receives the sanction of two homeopathic medical journals. A box of twenty-four large rattlesnakes was received by a museum proprietor in Rochester. Having provided a long hempen cord, a bottle of ammonia and some whisky, 'to be prepared for an emergency,' the owner, known as 'Rattlesnake Pete,' unfasted the lid of the box, and, as a large snake darted out, seized it by the neck and carried it to a table, while the long lithe body coiled round his arm and the rattles were 'singing away like grasshoppers.'

"Now comes the interesting part of the performance. A piece of common window glass was placed near the snake's open mouth, and the rattler struck his wicked looking fangs, which were nearly an inch in length, against the glass, a thin stream of yellowish looking liquid spurting upon it at each stroke. 'Oh, he's full of it,' said Pete. 'There's poison enough right there to kill twenty men.' While he spoke he walked toward the den, and giving the snake a twist, released him. The poison on the glass was absorbed with sugar of milk, scraped into a bottle and carefully sealed. The poison thus obtained is sent to certain London homeopathic physicians, who use it in their practice as a medicine for diphtheria and other diseases of a similar nature. The poison is supposed to be very valuable. The process just described was repeated with snake after snake, until all in the box were transferred to the den. After the first three or four were taken out Pete plunged his hand among the mass of wrigglers with seeming impunity, dragging off his next victim with a quick

but certain motion. 'These fellows will give up their poison more readily tomorrow; they are a little sluggish on account of having been kept in such close quarters for the past forty-eight hours,' said Pete in response to the writer's query. 'Besides selling the poison, which I have told you about,' added Pete, "when a snake dies I fry out the fat of the reptile and obtain from one and a half to two ounces of a very penetrating oil from a fair-sized snake. This oil is worth \$ per ounce, and is used as a specific for deafness."

AUSTRIAN TRADE.

The United States Consul at Vienna, Austria, makes the following comments, prefacing his report of the trade of Austro-Hungary for 1893, published in the April number of Consular Reports No. 163: "It is deplorable what a poor showing the United States makes in the export of merchandise into this empire. With the introduction of free raw material into our country, we should be able to do much more business than heretofore. Manufacturers who wish a share of this business should work for it here in Austria just as they make

efforts for the trade at home. Those trying to find an outlet in foreign countries usually send catalogues to a Consul or ask for the addresses of one or more good business houses in their line, and thereby hope to open a field for their wares. This method will not succeed in one case in a thousand, and just so long as it is continued, just so long will the Americans do but little business outside of the United States, except in articles the foreigners must have.

"What foreign merchant will order American-made goods through a catalogue, when he is at the same time either handling similar goods or is having English or German goods offered through personal interview with a well posted representative? If a manufacturer at home is disinclined to go to the expense of sending out an agent, let him combine with one in another line, and thus reduce expenses. This is the way the Germans and English do when they send out agents to a country where they wish to build up a trade, and we can do no better than to follow their example. Representatives of American houses will always find their Consuls ready to aid them."

THE PRODUCTION OF NAVAL STORES.

The annual production of naval stores in the Southern States, according to the Savannah News, has reached for several years past the enormous output of 2,000,000 barrels, in round numbers, comprising about 400,000 barrels of spirits of turpentine and 1,600,000 barrels of rosin.

What these figures represent in capital, labor and industry will surprise many not familiar with the subject. This amount of 2,000,000 barrels of naval stores weigh very nearly, if not quite, 500,000 tons. Allowing 24,000 pounds, or twelve tons, to the car, it would require 40,000 cars to remove this bulk from the pine forests to the seashore. Allowing twenty loaded cars to a train, 2,000 train loads a year have to be run. Each train is about 800 feet long, so that 2,000 trains thus loaded would represent a solid single file of 395 miles, or reaching from Savannah to Atlanta, and fifteen miles beyond.

Placing these 2,000,000 side by side they would form an air line reaching from Savannah to New York, seven hundred and sixty-seven miles long. The cost of transportation averages 50 cents per barrel. Hence, \$1,000,000 freight are annually paid to transportation companies. Fully 50 per cent. more is paid for freight on supplies consumed by turpentine operators and passenger fares, giving a grand total of \$1,500,000 paid to railroad and steamboat lines.

To distill these 500,000 tons at least 800 stills are kept busy eight to nine months in the year. The average capacity of the stills is eight barrels, yielding five barrels of rosin and one to one and a half barrels of spirits of turpentine. Three hundred and thirty thousand charges have to be run, employing 800 stillers and as many assistants. Two thousand five hundred coopers are employed to get the material and make ready the barrels. To move this amount of crude gum from the forest to the stills and thence to the shipping point, 6,000 mules and 2,500 teamsters are steadily employed.

The cost of the still, mules, wagons, horses, tools and value of boxes already out will exceed \$5,000 to the still, representing a capital of about \$50,000 invested in the turpentine business. Allowing twenty crops of boxes, consisting of 10,500 boxes each to the still, there are 168,000,000 boxes in operation. Allowing two boxes to the tree, on an average, there are 84,000,000 pine trees being bled. Every tree has to be raked around every year to prevent destruction by fire. Every box has to be chipped once a week for eight months in the year; every box has to be scraped by hand in the Fall of the year. Besides this, from 40,000,000 to 50,000,000 new boxes had to be cut to replace discarded, burnt or dead trees. Every box has to be dipped four or five times during the season. All this work is done by about thirty-five to forty hands to each still, thus employing 30,000 to 35,000 well trained hands. This force is overseen by 800 woads riders or mounted men, who watch closely that the work is thoroughly and conscientiously performed.

Six or seven hundred commissaries or stores feed and clothe the army of 40,000 men and 7,000 mules and horses.

As large as this output of 2,000,000 barrels annually may seem, it does not by any means represent the actual output of crude gum from the prolific pine tree. Twenty to twenty-five per cent. of the gum remains on the trees, on account of the crude and imperfect way of scraping by hand, and never reaches the still.

To produce 2,000,000 barrels of the distilled product, 2,500,000 barrels of crude gum are necessary, and adding to this the twenty per cent. remaining on the trees, there is an annual production of 3,000,000 barrels of 500 pounds each, produced by 84,000,000 pine trees, or 18 to 20 pounds of the crude gum to the tree.

The turpentine operator pays for a three years' lease of one crop of boxes \$300, or, on an average, \$100 a year for 10,500 boxes. Hence, the landowners receive every year an income of about \$1,500,000. It will be seen that 800 stills pay every year, for freight and rent, \$3,000,000 or \$37,500 each, more than six times the invested capital.

The average wages paid will be somewhat over \$15 per month for eight months in the year, or \$600,000 per month—\$4,800,000 during the season. The cutting of new boxes, raking and scraping is all done by contract, and will bring the total output of wages to considerably over \$2,000,000. To feed 7,000 mules and horses costs about \$10 a month each, or \$70,000 per month, or \$840,000 is paid out for Western hay and grain.

The prices for rosin have ranged from \$1 to \$3 per gauge barrels of 250 pounds, but as the above figures are based on round barrels of nearly 500 pounds, the average value of rosin would not be less than \$3. The average value of a barrel of turpentine is about \$13, so that 2,000,000 barrels would represent \$5,200,000 received for spirits of turpentine and \$4,800,000 for rosin, making the total value for the crop for 1893-4 of \$10,000,000. Allowing 5 per cent. commission, the factors along the seaboard received \$9,500,000. Sampling, storage and fire insurance will average 10 cents per barrel, or \$200,000,

leaving to the 800 stills about \$500,000 net, or \$500 per still. To this should be added, however, the profits on commissaries or stores, through which the greater portion of the \$5,000,000 of wages are paid, bringing the income of the average still to about \$10,000 or \$12,000, not counting wear and tear and incidentals; so that this year there was hardly more than a living for the operators.

Savannah is the largest naval stores market in the world, receiving between five-eighths and three-fourths of the total production; consequently, Savannah's interests are closely linked to the interests of turpentine operators. Few operators and very few general readers have any knowledge of what becomes of this vast amount of rosin and spirits of turpentine. An enumeration of the technical employment they obtain will be of some interest.

As the South practically supplies the whole world with rosin and spirits, a small amount of either used for any purpose throughout the civilized nations amounts to considerable in the aggregate. Spirits of turpentine exposed to the air has the faculty of absorbing a large amount of oxygen, and, after absorbing it, to yield it to other bodies. It is, therefore, universally used, mixed with linseed and other drying vegetable oils, in painting. The spirits of turpentine causes these oils to form an elastic, tough mass, closely allied to rubber or caoutchouc, on which the quality and durability of the paint as well as varnishes depend. The oxidizing capacity of turpentine is unique, and so far no other known product of chemistry has been obtained to replace it fully. As a medicine, spirits of turpentine, taken internally, is a powerful diuretic. Externally applied, it is a powerful counter irritant. It is much used in medicine and by veterinary surgeons. If rosin is dissolved in vegetable oil and spirits of turpentine, a varnish is formed, so that rosin and spirits of turpentine form the basis of all the cheaper grades of varnishes. Turpentine is also used in the manufacture of rubber and insulating compounds. It is a solvent for nearly all oils, both vegetable and animal. Mixed with alcohol it forms camphine.

So vast is the demand for turpentine, and its qualities and effects are so unique, that the consumption, even at \$1 a gallon, would only be very little reduced. The low prices are entirely due to over-production, as it cannot be technically replaced by anything else.

Rosin forms with alkali a soap, and every soap factory in the world uses more or less rosin. The darker grades of rosin are employed to produce coarses, brown soaps, while the finest grades are used for toilet soaps. A mixture of two-thirds of rosin and one-third of coal tar forms a very tough and serviceable pitch, and large quantities of the lower grades of rosin are consumed in this way.

For a number of years several large establishments have distilled hundreds of thousands of barrels of the lower grades of rosin. Both Savannah and Wilmington have such establishments, and the demand for their product has steadily in-

creased at very remunerative prices. If rosin is heated to 600 degrees or 700 degrees Fahrenheit it distills, and the following are the products, about 18 to 20 per cent. being lost in cases, leaving the condensable and solid bodies: Rosin spirits, 5 to 6 per cent.; white oil, 33 to 35 per cent.; red oil, 26 to 28 per cent.; brewers' pitch, 7 to 8 per cent.

Lampblack factories are now in operation in Savannah and Wilmington and interior points, using waste rosin and dross. There is an unlimited demand for lampblack at \$60 per ton, and three to four tons of rosin and dross will make a ton of lampblack. A patent steam apparatus will also be tried next season, which will recover a large percentage of gum from the trees now going to waste. The cost of taking the scrape off by steam is not larger than by hand scraping, and adds from 10 to 15 cents to alxty barrels to each crop of 10,500 boxes. A market for dross has been created, and as other lampblack factories are projected, large shipments of lampblack from the turpentine belt will result.

Several attempts have been made to pit crude gum until Spring, and it has resulted in one instance in a gain of \$3 a barrel on 100 barrels of spirits. How this enormous and ever-increasing demand for naval stores will be supplied in another score of years, when our forests have become exhausted, is a problem for chemistry and human ingenuity to solve, using other natural resources, which another generation will have to discover.

THE COLORS OF TOBACCO SMOKE.

Smoke consists of minute particles of solid or liquid matter suspended in the air and its color depends partially upon the chemical constitution of such particles, but also largely upon their size. Exact experiment has shown that as the size of minute particles suspended in air is gradually increased they give rise to colors varying from sky blue down through the whole range of the spectral scale. This is the cause of sunset and sunrise colors in the sky. Its effects can also be traced in the case of the two kinds of tobacco smoke, modified by the murky tints of the carbonaceous products. The smoke given off from the heated surface of the burning tobacco in the bowl of the pipe consists of matter all of which has been highly heated and very fully oxidized and decomposed. It consists mainly of exceedingly small solid particles, emitting by virtue of their smallness a bluish color. On the other hand, that smoke which has been drawn through the tobacco into the mouth of the smoker carries with it a relatively large quantity of water and hydrocarbon, which are condensed upon the solid particles above mentioned. The relatively large size of such particles explains the well-known grayish color of the smoke which issues from the mouth of the smoker.

Gratitude and treachery are merely the two extremities of the same procession. You have seen all of it that is worth staying for when the band and the gaudy officials have gone by.—Pudd'nhead Wilson's Calendar.

TRADE NOTES.

You can find out what good beeswax looks like by asking Theodor Leonhard, Paterson, N. J., to send you sample cakes of his "T. L." and "Diamond L." brands. These waxes are guaranteed to be strictly pure, sun bleached without the use of chemicals.

Grand Rapids, Wis., 3-25-1894.

Otis Brothers, Binghamton, N. Y.

Gentlemen: Inclosed please find one dollar, for which send "Otis Never Failing Corn Cure." It is truly the best remedy extant for corns. Yours respectfully,

C. M. WEBB.

When the subject of saving money comes up, the Chicago Aeriform Carbon Co., 40 West Polk street, Chicago, have something to say which will interest every druggist who owns a soda fountain. See their advertisement in this issue, and note prices upon the No. 2 apparatus for charging portable fountain.

The Germania Wine Cellars, Hammondsport and Rheims, New York, distill a pure grape brandy for medicinal purposes only, and they invite those of the drug trade who are anxious to procure a brand of such goods upon which perfect reliance can be placed to correspond with them for prices.

The Buckeye Paint and Varnish Co., Toledo, Ohio, say that they have some fast-selling specialties for the paint trade, and as this is the season for such goods, those who handle paints should make it a point to become acquainted with the goods of this firm. Write to them and they will tell you all about their goods.

In looking for pill boxes do not overlook the advertisement of William Koehl, Erie Pa., in this issue. Mr. Koehl is just making the acquaintance of The Era's readers, and he quotes some prices on his specialties which are acting as an excellent introduction. He also has some prices on drug labels, boxes, corks, etc., which will interest any one who will apply for them.

Don't you want that \$1.50 Raymond & Co. are offering, or haven't you seen their advertisement on page 7? They offer you one-half dozen Pectoral Plasters free, and agree to send advertising matter with your card printed on it to one hundred of your customers. The advertising will probably sell the half-dozen plasters, but you can sell this kind of goods without advertising.

We are in receipt of a copy of Volume 24, 1894 catalogue, issued by Peter Van Schaack & Sons, "The Old Salamander Drug House" of Chicago. The book is an attractive one of nearly one thousand pages, thumb indexed, and as this is the firm's twenty-fourth annual effort, they are to be congratulated on its result. The edition, we understand, is a large one, and the work will no doubt be received with the appreciation it deserves at the hands of the many friends and customers of the firm.

REDUCTION IN PRICES.

Prices have been reduced at the Century Restaurant, 122 William street, New York, the quality of the viands remaining first class.

Druggists who have anything special in view in the way of pharmaceutical manufacturing, should write B. M. Butler, Armistage avenue and N. Paulina street, Chicago, for estimates on the cost of putting up such preparations complete. Mr. Butler's laboratory is fully equipped for economical manufacturing, and he invites correspondence.

Seely's Dyspepsia Powder, manufactured by S. S. Seely & Co., Bath, N. Y., while comparatively new to the general drug trade, has been tested enough to dispel any doubts as to its value as a remedy for the disease named. It is put up in a shape which suits the convenience-loving public, and is proving a good seller wherever introduced.

How about your soda fountain? How long have you had it? Do you think it perfectly safe? If there is any doubt about its stability write the Iron Clad Manufacturing Company, 22 Cliff street, New York for prices on their patent brass-bottom, tin-lined, steel fountains. These fountains are tested at a high pressure, and the manufacturers state that no one ever heard of one exploding.

The druggist has only to show the Pri-mo Ladies' Syringe, manufactured by E. J. Hussey & Co., 80 John street, New York, to the physicians of his neighborhood to insure a constant demand for them. These syringes are of new design, made of hard rubber, and perfectly aseptic. They are handsomely packed in polished cherry boxes. Try a sample lot. They are for sale by all jobbers.

Dr. A. L. Worden, Detroit, Mich., the proprietor of "Protectio" says that no fatal case of diphtheria has occurred in any of the thousands of families who used and are depending upon this remedy, and that it will safely cure enlarged tonsils wherever its administration is continued for some months. Weak, delicate children are said to become robust under its continued daily use.

The products of the Chemische Fabrik vorm Hofmann & Schoetensack, Ludwigshafen, Germany, are noted for their superiority and their choral hydrate (Saames brand), salicylic acid, paraldehyde, acetalind, resorcin, oil of bitter almonds, etc., can be procured through R. W. Phair & Co., 14 Platt street, sole agents for the United States. Send for literature upon Salacetol, "Chemia," the new non-toxic antiseptic, and mention The Era.

It is nothing unusual for the farmer to complain of short crops, and every druggist knows that such a condition of affairs affects him an indirect manner, but let the iceman herald the fact that the ice crop is short, and the effect is quickly seen by a raising of prices. At such times it is policy to look into the claims of the manufacturers of soda water apparatus as to the economy of their respective apparatus. The Low Art Tile Company, 92 Broadway, Chelsea, Mass., make distinctive claims for their apparatus in this line, and they will be pleased to demonstrate them to every intending purchaser who will take the trouble to write to them.

Grape soda, made from Dr. Welch's Grape Juice, is a great customer-catcher if it is made right, and as far as making it right is concerned, the Welch Grape Juice Company, Vineland, N. J., will send any druggist who will mention the Era a formula for making it, as well as a two-ounce sample of the grape juice and some figures showing what the goods cost. Better take advantage of this offer.

The druggist who is anxious to please his customers can do so at a slight expense by furnishing a corkscrew with each bottle of medicine he sells. This question of expense can be settled by writing James M. Macconnell, 132 Nassau street, New York, for prices on Clough's patent folding, decorated corkscrews. They are cheap and furnish an excellent advertising medium for the druggist who uses them.

"Everything you want at prices to suit your pocket book" is the position taken by John Phillips & Co. of Detroit in the matter of drug store fixtures. Their products embrace showcases of all kinds, including their "Silent Salesman" clear case, store fixtures, fountain tops (which make your old fountain look like a new one), store stools, mirrors, etc. Write them for designs and estimates before placing your order definitely.

The D. B. Scully Syrup Company, 49-51 River street, Chicago, claim for their Rock Candy Syrup a wholesomeness and delicacy of flavor that is unsurpassed, and they invite the trade to give their goods a trial for both pharmaceutical work and soda water dispensing. They warrant their syrup to keep in any climate. Write for descriptive price list and market quotations.

The new surgical dressing, "Unguentine," manufactured by the Norwich Pharmacal Co., Norwich, N. Y., is rapidly becoming a favorite with the medical profession, on account of its antiseptic, healing and restorative qualities. It is therefore quite proper that the drug trade become posted upon its therapeutic properties and application. Full information will be supplied upon application to the manufacturers.

Twenty-five dollars for an assistant accountant who will work for years without any further expense is certainly a good bargain. This is what the Peck Cash Register Co. of Syracuse, N. Y., offer in their No. 15 Cash Register. It never misses a day's work, and does not make mistakes, and is said to be just the thing for the prescription department. The manufacturers solicit correspondence from the retail drug trade.

A great economy can be effected by keeping goods in good condition for the inspection of customers. This is as true of brushes as of anything else kept in a drug store, and the Graves Brush Rack Co., of Rome, N. Y., furnish a fixture which meets this requirement to a nicety. Their Brush Rack soon pays for itself by preventing the marring of backs and breaking of bristles, and its construction is such that it will last a lifetime and pay continuous dividends.

Attention is directed to the attractive announcement of the New York Quinine & Chemical Works on the last cover of this issue. To procure anything in the way of medicinal chemicals, which will give entire satisfaction, the retail trade is reminded that the placing of the letters "N. Y. Q." after the item so ordered will insure such a result.

One great point which the manufacturers of Tanglefoot make in favor of their goods is the fact that it yields a profit of over 200 per cent. and you do not have to furnish an apology after you have sold a sheet. Goods of this character are the kind which please the public and give satisfaction to the dealer. See prices in advertisement in this issue.

Lautler's olive oil has always enjoyed the highest reputation for purity and desirable qualities, and the reason for this confidence in his product is given by his American agents, George Lueders & Co., 218 Pearl street, New York, in their advertisement in this issue. From the statements given therein it will be readily seen why it is important to specify "Lautler's" when ordering.

In addition to the manufacture of porous, medicinal, court and mustard plasters, the Deane Plaster Co., Yonkers, N. Y., have two specialties which people are very apt to call for if they know the druggist keeps them. They are the Anti-Grip Porous Plaster and Deane's Cough Plaster on Canton flannel, costing \$8 and \$12 per gross respectively. On order for one-half gross quantities and upward the buyer's card is printed on the goods free of charge.

The Upjohn Pill and Granule Company of Kalamazoo, Mich., are specialists in the manufacture of pills, and their improved methods in the manufacture of such goods enable them to turn out a product which meets the unqualified approval of the medical profession. Every druggist should have the list of over 500 kinds of pills which this company keep constantly in stock, and any one desiring private formula pills put up in the friable form should write for estimates.

If a salesman comes into your establishment and offers to save you 10 per cent. on an article you purchase, and can really do so, you are interested at once, and do not hesitate to place an order. Why, then, should you hesitate to place your order for an apparatus for charging soda and mineral waters with liquid carbonic acid gas which will save you 75 per cent. over all old methods. Write for catalogue and prices to the Liquid Carbonic Acid Mfg. Co., Chicago, Pittsburg or St. Louis.

A great improvement has recently been made in the Arnold steam sterilizers, manufactured by Wilmot Castle & Co., Rochester, N. Y., which adapts them for sterilizing at either a high or a low temperature. This improvement will render them more popular with the public and the medical profession, and the drug trade will do well to stock them in anticipation of the demand for such articles, which the Summer season always brings. Write for descriptive circular and price list, mentioning The Era.

Stewart's Gipsy Pile Ointment must be a good thing, according to the testimonials of many physicians who have used it in their practice with complete satisfaction. The profit on this preparation is just 100 per cent.—costs 25 cents and retails for 50 cents. Express or postage is paid by the manufacturer, Fred W. Stewart, Oswego, New York. Write him and see how he advertises the preparation to the general public.

A cold in warm weather is one of the most disagreeable things imaginable, and the druggist who is prepared to furnish a remedy for such difficulties is a benefactor to his kind. The means for attaining this end are found in Cushman's Menthol Inhaler, manufactured by H. D. Cushman, Three Rivers, Mich. The retail drug trade will be interested in the means which are used to advertise this inhaler to the public, and the advertisement of Mr. Cushman in this issue should not escape attention.

The Akron-Canton Stoneware Agency, 25 Lake street, Chicago, are making stoneware jars as large as thirty gallons, with or without faucet holes. These jars are well adapted for manufacturing chemists and wholesale druggists to store acids, age extracts and for mixing, etc. They are guaranteed to stand acids and alkalis, and with ordinary care will last forever. This firm also makes a specialty of supplying chemists with mixing bowls, evaporating pans, etc., and will be glad to send illustrated catalogue upon application.

The little problem in ratio and proportion which Smith & Painter of Wilmington, Del., present in their advertisement in this issue shows that there is a great deal in the way fruit juices are put upon the market for the economical buyer to carefully study. When it comes to quality Smith & Painter's pamphlet on natural fruit juices, which they send free of charge, will explain everything on that point and give lots of valuable information beside. Write for it and mention The Era.

Charles Stern & Sons, 14-16 Vesey street, New York, call the attention of the trade to a line of goods which is of particular interest to those who desire a superior article for dispensing or manufacturing purposes. The firm has large vineyards at Fresno and Los Angeles, Cal., and their wines and brandies reach the trade from first hands. Their sherry is especially suitable for the manufacture of beef, wine and iron, their Burgundy and Zinfandel for wine of cocoa and their Port, Angelica and Muscatel for dispensing purposes.

All that a druggist's customers can reasonably ask for in the licorice they purchase is quality. But in spite of this there are other things which help the dealer sell such goods, and among these is the attractiveness of the packages in which they are put up. The licorice put up by Mellor & Rittenhouse, Philadelphia, is distinguished by these two great features, neatness of package and fineness of quality, so that the dealer in ordering the "M. & R." brand is reasonably sure of getting quick-selling goods, and having pleased customers.

Druggists who are in search of a good brandy for medical use, should write to the Hammondsport Wine Co., Hammondsport, N. Y., regarding their special cognac process brandy. Full information as to the quality and prices will be furnished upon application, as this firm gives particular attention to all inquiries from the drug trade.

As direct importers and manufacturers of fine essential oils, essences and pure fruit juices, the Beach & Claridge Company of Boston are in an excellent position to furnish the druggist with everything he can possibly want in the way of soda water flavors and fountain requisites. All they ask in the way of introduction is your name and address upon a postal card, which will bring you their catalogue, which is well worth the asking.

Callisaya La Rilla, manufactured by Charles Allen Reed, 9 Cliff street, New York, can be depended upon as a first-class preparation of callisaya, because it is the exclusive product of one laboratory and manufacturing force, which has nothing else to do but make a good article. All the ingredients of the preparation are fully tested as to their quality, and a long experience in manufacturing this special product has taught Mr. Reed just where, when and how to buy his supplies. Correspondence with the trade is invited by the manufacturer.

Robert Shoemaker, Jr., of 215 Race street, Philadelphia, illustrates two of his eight sizes of tablet machines upon another page in this issue. These two machines, designated as "A" and "B," are especially adapted to the needs of the retail druggist, both being hand machines compressing tablets up to three-eighths inch and one-half inch in diameter respectively. Both are of light weight, but strong and durable, and occupy small space. Parties who are thinking of investing in a tablet machine should write for catalogue of the "Shoemaker."

The W. J. M. Gordon Chemical Company of Cincinnati, in a recent communication say: "We have just received official notice that we received medal and diploma at the World's Fair, Chicago, for 'High gravity and freedom from impurities' on our glycerin. This is quite a feather in our cap, as we were not only in competition with American, but with German, French, Russian and English manufacturers also. Still it only confirms the fact that wherever our glycerin is placed in competition with others it always and invariably takes the premium."

The enterprising druggist is the one who is constantly on the alert to serve his patrons with the latest and best, and he counts it a duty to investigate the merits and demerits of all articles to which his attention is called. The American Silver Trust Company, 200 Main street, Buffalo, N. Y., is after the trade of this class of druggists, and they claim that they have a truss which is a great improvement over many now on the market. To demonstrate this they will send full description of their appliance upon application, with plenty of testimonials from parties who are now handling them with profit.

The Inquiry from Jesse Jones & Co., Philadelphia, as to what you put up, is one which is quite pertinent when you remember the long list of articles which you might put up, if you had the proper means for doing so. This is the reason they call attention to their well-known "J. J. Box," as one which fills the requirements for durability, cheapness and attractiveness. They invite inquiries for quotations in any quantities from a thousand to a million, and guarantee prompt service, both in answering such inquiries and in turning out the goods afterward.

Although the retail druggist is usually one of the busiest persons upon earth, yet he ought to take time to figure on the brushes he buys. A great help in this way is the catalogue of the Palmer Hardware Mfg Co., Troy, N. Y., which shows a complete line of metal brush specialties manufactured by this firm, and is sent free upon application. Their "T. M. C." dauber, consisting of a solid knot of extra stiff bristles upon a polished nickel-plated steel handle, is a great seller, and the retailer should get prices upon it for reference when ordering such goods.

The doubling capacity of a pharmaceutical manufacturing plant within three years is pretty good evidence that the products of such a concern are well appreciated by the drug trade. Such is the record of J. E. Moore & Co., 415 Broadway, Albany, N. Y., and they invite every druggist in the United States to send for their 1894 catalogue and become acquainted with the very complete line of pharmaceuticals which they manufacture. They will also be pleased to furnish quotations upon special preparations and private formula work, their complete facilities enabling them to turn out such work in the most satisfactory manner.

If there is a physician in your neighborhood whose patronage you would like to obtain, the best way to go about the matter is to show him how well you can perform some of the essential operations in pharmacy. You might show him how you can dispense powdered drugs in a manner which allows the patient to receive the full benefit of the medicine and at the same time be pleasant to take. Before doing this, however, you should write J. M. Grosvenor & Co., 105 Milk street, Boston, for samples and particulars regarding their "Konseals." They are cheap, save time, please the patient and are just what the physician will approve.

People are very imitative about house-cleaning. Let one person discover some short cut around the difficulties of this operation and the rest of the neighborhood follows suit. It is just this way when a package of Gyp sine, manufactured by the Diamond Wall Finish Co., Grand Rapids, Mich., is once introduced into a community. Its use soon becomes universal. The proper thing for the druggist to do to start a trade of this kind is to send to the manufacturers for color cards of this wall finish, and a copy of the "Gyp sine Advocate," which circulates among the people with the dealers' name upon it, and helps sell Gyp sine.

Any investment which tends to increase a man's stock of knowledge cannot but be regarded as a good one, and the increase which comes from a study of the pages of "Saxe's New Guide; or Hints to Soda Dispensers," makes the investment of \$3 for it an exceptionally good one. This small amount often represents the difference between good and bad soda water. Those new to the business can learn all about it, and those old in the business can learn something new by a perusal of the work. It is published by the Saxe Guide Publishing Co., 409 Dearborn street, Chicago.

H. Planten & Son, 224 William street, New York, announce to the trade that they have become proprietors of the preparations formerly owned by the late firm of Fraser & Lee, and ask that all future orders for these goods be sent to them. This line of preparations includes Baker's Pain Panacea, Brandt's Indian Pulmonary Balsam, Brandt's Indian Purifying Extract, Campbell's Cholera Cordial, Desher's Fever and Ague Pills, Kellogg's Worm Tea, Laycock's Worm Killer, Miller's Hair Dye, Punderson's Condition Powders and Tanner's German Ointment.

The much debated Subgallate-bismuth-Dermatol matter now seems in a fair way to approach a focus. The *Farbwerke vorm Meister, Lucius & Bruning*, have brought suit against *Rosengarten & Sons*, of Philadelphia, to restrain them from manufacturing subgallate of bismuth, which the plaintiffs put upon the market under the name of "Dermatol." The contention does not include any action for infringement of the trade-marked name, but simply the process of manufacture. It is understood that the defense will claim that a process for manufacturing basic subgallate of bismuth has been known for over fifty years.

The therapeutic qualities of Iatrol, the new odorless, non-toxic antiseptic, have been fairly well established by an abundance of clinical tests, so that the manufacturers of the preparation are justified in placing it before the medical profession in all the varied forms which surgical practice may demand. The advertisement of the *Clinton Pharmaceutical Co.*, of Syracuse, N. Y., in this issue, shows the different ways in which it is put upon the market and the wholesale prices for the same, and its growing popularity with the medical profession makes it a preparation which the drug trade will do well to become posted upon.

The season for painting is now in full blast, and the gentlemen in caps and overalls are now busy making old houses look like new ones. If there are any houses in your neighborhood which need painting, perhaps you are to blame somewhat. You may not have presented the question of colors and prices to the owners of such property in a convincing manner. If you don't know exactly how to do this, write to *John Lucas & Co.*, Philadelphia or Chicago, and they will show you how to do it by sending you some of their attractive color cards, which induce people to buy paint, and then feel perfectly satisfied after they have bought it.

The *Mobile Drug Co.*, of Mobile, Alabama, whose place of business was destroyed by fire on March 16, 1894, announce that they have purchased the stock of goods, good will and accounts of the *Marshall-Quarles Drug Co.*, of that city and will continue the wholesale drug business at 57-59 North Water and 55 St. Michaels streets. They will carry a complete stock of everything that belongs to the jobbing drug trade, and ask a continuance of the favors which have been given both firms in the past.

The list of fruit juices for soda fountain use presented by the *I. Calvin Shafer Company*, 86 Cortland street, New York, embraces all the popular fruit flavors which the most discriminating patronage will demand, and the economy which the dealer is enabled to practice through the use of this firm's goods is an additional recommendation for them. Blackberry brandy will soon be a seasonable article and the druggist who is figuring upon a supply for the Summer should investigate "Shafer's Medicinal" brand. Write for prices to the New York house, or to their Western branch at 197 Randolph street, Chicago, Ill.

The pure Synthetic Oil Wintergreen, manufactured by the *Herf & Frerichs Chemical Co.* of St. Louis, which was introduced by this firm several years ago, is now considered the standard make in the trade, and the demand for it is constantly growing. Their oil is always perfectly white, and has a very mild, clean flavor. Synthetic oil is preferable to the natural oil, because the latter is variable in its composition, and is not as pure as the H. & F. synthetic oil. For the convenience of their Eastern friends they carry a stock of oil wintergreen, salicylic acid, acetanilid and other leading specialties in their warehouses and office, 95 Fulton street, New York.

The *Rochester Show Case Works*, whose advertisement appears in this issue, are manufacturing an elegant plate-glass cigar case, on low base, combining in one splendid piece of furniture a counter and showcase for the display and storage of fine cigars. As this firm prides itself upon the high grade of work which they turn out, the drug trade will find their interest in fine showcases well repaid by an inspection of the catalogue of this firm, which will be sent free upon application. This company has lately moved into new and commodious quarters at Nos. 9 and 11 Graves and 7 and 9 Aqueduct streets, Rochester, N. Y., and their increased facilities at their new location place them in a position to turn out work equal to the best in the country.

WORLD'S FAIR PICTURES.

Later parts of the *Michigan Central's World's Fair Portfolio* fully justify the claim made upon the publication of the first number, that it was the best, the finest and the most artistic of popular publications on the White City.

Each part contains sixteen (16) large plates and is sold for only 10 cents. If you haven't seen it, the nearest *Michigan Central* ticket agent will show it to you, or you can write to *C. W. Ruggles*, G. P. and T. Agent, Chicago.

One point in favor of the use of Bromo-Chloralum as a disinfectant and desodorizer is its cheapness. One bottle diluted with water makes twelve pints of proper strength for use, and the fact that it is non-poisonous renders it a great favorite for general domestic use. Any druggist who will send a list of the physicians in his town to the manufacturers, the Bromo Chemical Co., New Lebanon N. Y., will be benefited by the means which the company employs in interesting the medical profession in this preparation. On orders for three dozen, 500 counter wrappers, with buyer's name thereon, are furnished, and the season is near at hand when the public takes an interest in such literature.

In looking the field over for seasonable goods, the fact should not be forgotten that there are such goods in the regular drug line, Wm. H. Warner & Co., Philadelphia, New York and Chicago, call attention to several articles of this character, which the retailer can appropriately stock with confidence that a good demand will follow during the Summer months. Among them are effervescent Lithia tablets, and effervescent Vichy tablets, put up in square nickel-capped jars—fifty tablets in each jar; also granular effervescent tablets of hydrobromate caffeine, put up to retail for 10 cents. See prices in advertisement in this issue, or write the firm at 18 Liberty street, New York, for further information, or special quotations upon large lots.

One of the latest adaptations of advanced therapeutics is the diphtheria antitoxin solution, prepared by Schering of Berlin, and handled in this country by Schering & Glatz of New York. The manufacture of this preparation upon a commercial scale is the result of the investigation of Hericourt, Richet, Behring and Aronson upon the substances present in the blood of certain animals, which protects them against infectious diseases, and its use as a preventive against diphtheria is now recognized by many of the leading members of the medical profession. The preparation is made under the personal supervision of Dr. Hans Aronson in the bacteriological laboratory of the *Chemische Fabrik auf Actien*, Berlin, and full literature upon the subject will be supplied upon application to the American agents, Schering & Glatz, New York.

Probably the first thing that engages the attention of the purchaser of soda water is the fountain from which it is dispensed. The next objects for inspection are probably the tumblers and holders, and if there is anything about their appearance not in keeping with the taste and elegance of the fountain there is sure to be a certain amount of disappointment in the mind of the customer. In a business such as that of soda water, attention to all its details is essential to success, and the druggist who is not quite sure that his entire outfit is in harmony should note the late advertisements of Whittall, Tatum & Co. of Philadelphia, and see what they are offering in the way of tumblers, tumbler holders and other adjuncts of the soda fountain. Their goods will please the public, and their prices will suit the discriminating buyer.

Chas. F. Whittle, manufacturer of drug store fixtures, Boston, Mass., has lately inaugurated a new departure in his business methods, consisting of a complete line of oak sectional drug drawers, tincture shelving, patent medicine cases, prescription cases, counters, etc., made "knocked down," finished, so that any one can set them up without the services of a mechanic. The "K. D." fixtures make a very handsome and attractive store, and parties contemplating any change in the arrangement of their place of business should write to Mr. Whittle for photo graphs and prices.

Exasperation is a very mild word for the feeling which a person experiences when he buys goods which are so carelessly wrapped up that they can't be carried home without being spilled or damaged. The enterprising dealer is alive to this fact, and takes every means possible to prevent such annoyances, but he cannot do something with nothing. There is nothing that acts so much as an incentive for doing things properly as the possession of proper appliances, and one of these latter which has just taken tendency is the Economic Roll Paper Cutter, made by the American Roll Paper Company, St. Louis, Mo. With an appliance of this sort, tidiness in putting up goods becomes a pleasure, and the druggist who has the least suspicion that he is careless in such matters should commence his reform by investigating roll wrapping paper.

One of the essentials to success in the soda water business is convenience in dispensing and one of the features of the business which has long been in need of conveniences is that of serving ice cream with soda water. The ordinary freezer is an unsightly object, which has to be kept out of sight, and its storage in an out-of-the-way place usually results in back breaking efforts to get at it. These conditions are what have made the Bradley Ice Cream Cabinets such favorites with all those who have used them. They are made in two sizes for soda fountain use, and in addition there is a delivery and family cabinet, which every druggist should investigate, who is at all anxious to extend his trade, and push it for all there is in it. Full descriptive circulars and price lists of these cabinets will be sent upon application to the Bradley Manufacturing Company, 218 George street, New Haven, Conn. Write them and mention *The Era*.

The soda fountain goods advertised by V. H. Schieffelin & Co., New York, in this issue are not presented as the cheapest on earth, but are guaranteed to be of the very best quality, and are sold at fair prices. These prices are those which bring a fair return to the manufacturer after he has expended his money for the best fruits the markets afford, and has used the highest skill in the making of his product. In addition to pure fruit juices, this firm has several notable specialties, such as "Beekman" Chocolate Syrup, Extract Jamaica Ginger, and concentrated tinctures of fresh orange and lemon peel, and it will pay the dealer to investigate these, also to write for the full descriptive list of other fine soda fountain requisites which this firm manufactures.

Those having given Clarke's Pure Rye Whiskey a trial declare it is one of the purest and best spirit stimulants they ever used. It has been the aim and intention of the manufacturers of this whiskey to make Clarke's Pure Rye the standard tonic of the present day. With this object in view, they have spared no expense to produce a whiskey that all physicians recommend as worthy of their prescriptions. The manufacturers claim that Clarke's Pure Rye Whiskey is absolutely pure. It does not contain a single grain of corn. It is made in the Fall from fresh, new rye and barley malt, thereby never using any musty grain in its manufacture. Colburn, Birks & Co. of Peoria, Ill., are the sole distributors of this whiskey, and recommend it to druggists not only for its equal ties as a whiskey, but for the profit there is in handling it. The druggist can make 150 per cent in handling these goods, which is surely enough profit for any one.

A knowledge of the nutritive qualities of bread and beef is one which has come down to us from an early period, but their use has usually been restricted to a maintenance of the physical well-being of the robust and healthy. A form of administration of these two foods which was adapted to the enfeebled powers of the convalescent has therefore always been a subject for experiment and investigation, and this research has given to the medical profession a bread and beef peptone, under the name of Panopepton, manufactured by Fairchild Brothers & Foster, New York. This preparation consists of the entire edible substance of prime lean beef and best wheat flour, thoroughly cooked, properly digested, sterilized and concentrated, and is a remedy par excellence in all conditions where a full quickly assimilable and comprehensive nutriment are required. Druggists who call the attention of their physicians to this preparation are doing a favor which will bring them direct financial returns.

Any dealer who will drop a postal to the Yellow Pine Extract Company, Allegheny, Pa., for printed matter, will receive blanks for names of sufferers from rheumatism, neuralgia, gout or lumbago—which, when filled out and mailed back, will receive prompt attention from the company in the way of mailing circular letter describing the Infallible Cure—with dealer's name attached as supply depot. Following testimony will show what the sale of each bottle means to the druggist.

Coalburg, W. Va., Sept. 21, 1892.

Yellow Pine Extract Company.

Dear Sirs: I have taken your Yellow Pine Compound and it has done me more good than anything I have ever taken in my life. I believe by the time I have taken this bottle, it will cure me sound and well. I wish to thank the Yellow Pine Extract Company. I have a friend here who wants a bottle, for which find enclosed \$2.25. Yours truly,

NATHAN HARRIS.

One bottle sold is the beginning of a steady demand, for a first-class article with good margins—\$18 per dozen—cash discount of 6 per cent. Retail at \$2 per bottle.

CRAB APPLE BLOSSOMS

When a Russian official is ordered by his Czar to serve in Siberia he has more things to meditate upon than the autocracy he is going to establish in his far-away province with himself as the central figure. He knows that he is going where the good things of life are as dear as tariff and long freight charges can make them, and he must be a very opulent official indeed if he does not have to deny himself some of the luxuries he has been accustomed to.

In fact, the exorbitant prices that the Russian tariff system imposes on goods from foreign markets in Siberia is one of the great drawbacks to residence in that country. It has kept the trade of these great provinces retarded to a degree scarcely conceivable, so great indeed that even the Czar himself saw that something was wrong.

A hardy, adventurous Englishman a few years ago thought he saw a way in which this would be in some way improved and at the same time a slight profit accrue to himself. The story of his expedition is one of the most thrilling of modern times. The Imperial Government had for a long time desired to open some communication from outside with interior Siberia by means of a great northern waterway of the Obi Gulf and Sea of Kara. As there are only three or four weeks in the year when this channel is free from ice, no communication had been established. The Englishman obtained from the Czar a concession that all tariffs should be remitted for three years on goods brought around by the north and down the Obi River to Tobolsk. To establish this means of transportation the Czar willingly consented. Then the Englishman fitted out his vessel, and secured from Tobolsk orders at fancy prices for all the luxurious things which the resident officials could think of. A large consignment of the Crown Perfumery Company's goods was among the cargo with which he finally sailed in the middle of Summer.

The expedition, however, was doomed to failure. In the Sea of Kara the vessel broke down in the midst of the ice, and in the struggle that finally saved her the Englishman was washed overboard and lost. The boat finally succeeded in getting through, but so long after the time that all the merchants to whom her cargo was consigned thought she had been lost, and canceled, with one exception, their orders for goods. The exception was in the case of the Crown Perfumes on board, which were readily accepted and sold at fabulous prices.

This was the last attempt made to open the northern waterway to Siberia, but the Imperial Government has not forgotten the plan, and another attempt will in all probability be made before long.

There should be no question or doubt as to the cleanliness of the tumblers in which soda water is dispensed, and one of the surest ways of attaining this end is the use of all the modern apparatus which make the work easy and pleasant. The Automatic Tumbler Washers, with or without brush, manufactured by L. L. Rowe, 16 Howard street, Boston, are appliances right in this line, and are worthy of careful investigation.

A WORTHY ARTICLE.

The Cooper Sheep Dip.

The above mentioned preparation is now being systematically introduced to the drug trade by the proprietors' American branch house—William Cooper & Nephews, Galveston, Tex., which point has been chosen as the importing point for this continent. Supply depots have been established at New York, Chicago and many other points, for the convenient distribution of the goods in small quantities.

A few words concerning the history of this valuable preparation will be interesting to our readers, and especially to those residing in sheep districts. It was put upon the market in England just fifty years ago, after long and laborious experiments by the originator, William Cooper, since which time the trade has grown to such immense proportions that to-day no less than 250 persons are exclusively employed in its manufacture. The proprietor and other members of the firm graduated with honors from the Royal College of Veterinary Surgeons, London, and so prominent are they in their profession as expert scientists in the skin diseases of sheep that they have frequently been approached by different governments for advice. Since its introduction more than thirty imitations have seen the light, and as quickly receded into darkness, and even now one occasionally is given birth and placed upon the market with a loud flourish of trumpets only to follow its predecessors.

The article has a supreme reputation all over the world, and there is no room for doubt that it is about to take its proper position in this country as a standard article in every drug store. In England it is familiar to every druggist.

For many years it has been in high favor on western ranches as a scab cure, but the proprietors are determined to introduce it into the remotest districts of this vast continent, notwithstanding the heavy labor and expense involved.

Its chief advantages are that (1) it is certain death to all insects that prey upon the sheep, (2) it is lasting in its effects, and so prevents fresh attacks for a long time; (3) it positively stimulates the growth of wool to a surprising extent, which is one of its chief features; (4) it dissolves in cold water and is instantly ready for use; (5) it is a powder compressed into packets, never wastes or deteriorates, making it a perfect stock article. The article received a medal and diploma at the World's Fair, and sheep that had been dipped in it carried off more than 300 premiums, which created somewhat of a sensation among breeders. Its undoubted and peculiar merits were thus demonstrated beyond the question of the most skeptical.

Druggists who have not done so are requested to furnish the proprietors with a list of the names of sheepmen in their respective districts, when circulars bearing their name will at once be mailed to all the parties, and a trade at once started. Attractive literature of a superior kind will also be furnished to every druggist who may apply for same, and his name appended. It is not too much

to say that many will accept such an offer made in so genuine and straightforward a manner.

Inquiries for prices and all other information may be obtained of the Cooper Dip Depot, 178 Michigan street, Chicago; Mr. Cyril Franklyn, Cotton Exchange, New York, or William Cooper & Nephews, Galveston, Tex. The latter will attend to all requests for literature. The nearest point will be the cheapest to buy from. A good commission is provided.—Adv.

A dentifrice to be popular with the public should possess the proper medicinal ingredients to heal and strengthen the gums, sweeten the breath, prevent decay, etc.; should cleanse and polish the teeth, and be free from acid or gritty material. The new tooth paste, "Savonia," lately put upon the market by Henry C. Blair, Walnut and Eighth streets, Philadelphia, possesses all these qualities, and is put up in a way which induces the public to give it the preference. Instead of the usual earthen-ware pot or thick bottle, Savonia comes in a thin collapsible tube, by which it is protected from air and moisture until the last portion is used. It is clearly, as it can be placed directly upon the brush, and does not get "messy" with water or spilled upon the toilet stand. It takes up the smallest possible space and cannot be upset or broken. It costs \$1.75 per dozen, and pleases customers. Write for advertising matter on this preparation and judge of its selling qualities.

A. D. Puffer & Sons, 38 Portland street, Boston, say that the essential attributes of a profitable soda water business are a beautiful apparatus, choicest extracts and fruit juices, courteous and prompt attendance and perfect cleanliness. The hundreds of elegant designs in marble and onyx which this firm has to select from shows that they can give the druggist the proper assistance upon one important point—that of selecting the beautiful apparatus. They can also furnish anything required in the beverage line. Send for their catalogue and see what they can do for you.

The additions which must be made to the library of the druggist by reason of the revision of the United States Pharmacopoeia are quite extensive, embracing, as they do, the work itself and the two dispensatories. The expense of these additions, however, can now be regarded as a nominal one, in view of the offers which McClellan & Patton, 48 Maiden lane, New York, make in their advertisement in this issue. In addition to offering the dispensatories and Pharmacopoeia free on orders for Dr. Patton's Headache Specific, they also give a set of metric prescription weights with orders for two dozen of the preparation. Note their special offer to send one dozen free to help start the trade in their remedy, and remember that these offers are only good until July 1, 1894.

In addition to their well-known remedies, obesity pills, fruit salt and bands, Lorink & Co., of 2222 Hamilton Place, Boston, have recently placed upon the market a remedy for thin people, called "Fat-ten-u," which they are advertising extensively. Interesting information regarding the remedies put up by this firm will be sent to the trade upon application.

Attention is directed to the advertisement of the Albany Chemical Company, of Albany, N. Y., in this issue. The products of this company cover a wide range of articles belonging to the practice of pharmacy, and the discriminating buyer will do well to have the price lists and catalogue of this firm before him when ordering goods.

The Saltsburg Bottle Works Co., Limited, Saltsburg, Pa., are sending out to the trade a very attractive catalogue with red-lined pages, calling attention to their regular line of bottle ware and the various specialties, such as citrate magnesia, tooth wash and pomade bottles. Every druggist should have this catalogue, and investigate the firm's specialties, which are now enjoying a great demand from those who always want the latest.

The Hart Manufacturing Co., 13-17 North Jefferson street, Chicago, manufacture complete marble and onyx soda water apparatus, with all the modern improvements, and their low prices, easy terms and liberal allowances for old apparatus have been instrumental in building up a large trade and making many friends among the retail drug trade. If you are interested in soda water apparatus, send to this firm for designs and prices.

EVANSVILLE, IND.

Chas. F. Foster has opened a new store on outer Fulton avenue, which is a credit to the city.

Thos. Johnson of the Fuller & Fuller Co. of Chicago has just visited the retail trade.

The J. F. Bomm Drug Co. has placed in position two large Puffer soda fountains, and has put in charge Chas. Eckert, an expert mixer from Chicago.

Chas. Mantel of Haynie's pharmacy is confined to his room by illness. His place is being filled by Ed H. Niehaus.

John C. Wyttenbach of the J. F. Bomm Drug Co. is assuming large proportions since he has taken to the gymnasium.

F. Q. Young, doing business at the corner of Grant and Washington avenues, has added a line of spectacles to his stock of drugs.

Chas. Walden of Walden's pharmacy, a member of the G. A. R. Drum Corps, has taken a trip to Indianapolis.

A. R. Pfaffen, a late graduate of the Chicago College of Pharmacy, has purchased the store of A. Walter, corner of Virginia and Main streets.

Geo. B. Howe, who had retired from the drug business for the past year on account of ill health, has assumed charge of Wm. Alexander's pharmacy, in the West End.

E. B. Williamson, representing the Jones & Hill Co. of Elkhardt, Ind., sought the

trade in the interest of his house, with the result that the city is now being flooded with chewing gum.

J. B. Stammel, a popular and entertaining gentleman, has shaken the Evansville dust from his brogans and decamped for his home in Cincinnati. Mr. Stammel's connection with the stores of Chas. Lavin and Wm. Alexander made for him many friends, who regret his leaving the city.

Walter R. Falling, one of the leading lights of pharmacy in Evansville, has been appointed a delegate to the convention of Populists, which will take place at the Hoosier capital in the near future.

John W. Plock, a graduate of the Louisville College of Pharmacy, now prescriptionist in the employ of Frank J. Klefer, corner of Frankfort and Reservoir avenues, Louisville, spent the past two weeks in Evansville visiting a sick brother.

At the last regular meeting of the Evansville Pharmaceutical Association a report of the various committees on programme was received and filed, the object in view being the entertainment of the Indiana State Pharmaceutical Association, which meets here in June. The affair promises the greatest assemblage of Hoosier pharmacists ever at a State meeting. Among well-known members of the profession who will be in attendance are Professors Lloyd and Fennel of Cincinnati, Diehl of Louisville, Green of Purdue University, Eitel, Hurty, Carter and Perry. Evans Hall has been secured, and Mayor Hawkins, with an address of welcome, will start the ball. An opening address by President George W. Haynie of the E. P. A. will next be in order. At the adjournment of the first session carriages will be taken for a view of the sights about Evansville, and at night there will be a general banquet. At the next day's session interest will be at its height, as several spicy lectures are on the docket. In the afternoon a ride on the steamer Royal to Henderson and return. Ample accommodations have been provided, and the Evansville Pharmaceutical Association hopes to greet every one interested in the welfare of the profession.

PEORIA, ILL.

Mr. Henry Smith, ex-president of the I. P. A., recently spent a day here.

Samuel Coffinberry is now an Alderman in the Fourth Ward.

Arthur Topping of the firm of Singer & Wheeler has been laid up with a very badly sprained ankle.

Chas. Bagnhart, manager of the sundry department of Singer & Wheeler, spent a week or two buying goods in New York recently.

Peter Bourscheidt sails for Germany on the 25th of May on the steamer Rhyndlan. He expects to make a tour of Europe before he returns.

F. De Kroft of Kavanagh's pharmacy recently returned from a hunting expedition up the river. He had a good time, but not much game.

J. F. Rowcliffe, on the West Bluff, has been absent from his store for some time. Rheumatism is the cause. Reported better now.

Probably some readers would be interested in the doings of the distilleries. Beside making alcohol, they feed innumerable cattle with the refuse. At present there are over 20,000 cattle being fed, and all are the property of Nelson Morris. There are 5,000 at the Monarch, 5,000 at the Great Western, 4,000 at the Woolner, 3,700 at Barker's, 2,000 at the Manhattan and 2,000 at the Northern. They are fed on mash and hay.

Kojl—Wheat bran, which is much cheaper than the barley used in making malt, is steamed and then spread on a cement floor. The seed of a microscopic plant is scattered through it. The room is heated and dampened, so that the atmosphere resembles that of a sultry summer day. And the seed multiplies rapidly, and a fungus grows on the surface. This fungus is called kojil. In forty hours the growth is stopped, and the entire material, bran and kojil, is placed in large tubs, mixed with water, and the extract of kojil is obtained. This is a liquid which resembles tea in color, and tastes like walnuts. The residue is pressed and dried, and the product is nutritious feed for cattle, which sells for nearly as much as the wheat bran, so that the material out of which the kojil is obtained has cost very little. Some of the kojil is allowed to mature, and from this the seed is obtained for the fresh planting.

The extract of kojil is pumped several hundred feet up to the distillery, where it is mixed in the cookers with cornmeal and water, the meal having been weighed by the Government officers, and in fifteen minutes the starch is converted into sugar. The conversion is accomplished by diastase, which is contained in kojil and is also in malt, but it is claimed that the kojil costs one-third as much as malt, and is so much stronger that it converts more sugar from the same amount of cornmeal. The cooked mixture is sweet and pleasant to the taste, and very nutritious.

It is pumped up into enormous tubs, each holding 31,000 gallons, where yeast is put in, and the mixture is allowed to ferment, and drawn off into stills. The mash is pumped into sheds and fed to cattle, who become very fat on it. Two tubs are mashed each day, and it takes the contents of seven cookers to fill them. Fourteen hundred bushels of corn are used daily.

QUINCY, ILL.

Heidbreder Bros. are now running two stores, having just purchased that of W. F. Smith, at 12th street and Broadway.

J. O. Christie, leading druggist, has taken a partner, Edward Granacher, and the firm is now the Christie Drug Company.

H. Germann of State street, is building an addition to, and completely refitting, his store. He will have one of the best in the city.

The Aldo Sommer Drug Company, succeeding the old firm of Sommer, Lynds & Co., who were burned out in February, opened for business the 1st of May, with a complete new stock.

Charles E. Lionberger, member of the firm and in charge of the city business of Aldo Sommer's Drug Company, is very

assiduous in visiting and looking after the wants of the retailers.

Dr. J. Y. Lewis has assumed the duties of president of the Quincy Retail Druggists' Association.

The warm weather caused a boom in the soda business, and every store sells the "best drinks in the city." The Newcomb Pharmacy is a popular stand.

Judge Walker of the City Hall Pharmacy reports largely increased business. Johnny Fischer looks after the prescription department.

Business among the retailers this Spring shows very gratifying improvement. In jobbing lines there is a general good demand for staples. The paint and oil trade is active, and the outlook is good for future business.

BOARDS OF PHARMACY.

Washington State Board of Pharmacy held its regular quarterly meeting at Seattle, May 14 and 15.

Rhode Island Board of Pharmacy is composed of President N. N. Mason, Providence; Secretary, W. E. Cates, Providence; W. E. Clarke and W. J. McCaw, Providence; J. H. Taylor, Newport; A. E. Collins, Westerly; H. M. Dudley, Woonsocket.

Mississippi State Board of Pharmacy met in Jackson, April 3. The following were granted licenses upon passing satisfactory examination: W. A. Adams, S. J. Winston (colored), of Natchez; L. J. Metz, Hansboro; A. S. Booth, Burnsville; A. D. Simington and E. G. Spisales, Meridan.

Colorado Board of Pharmacy, at its last meeting, out of a class of twenty-one candidates, granted certificates to John Boeck, Marie D'Armour, George A. Crowe, George W. Card, Henry Allen Russell, Ives Van Schaack, Bryan A. Tuttle, C. J. Setthel, S. C. Du Bois, R. Bartlett and E. F. Perry.

New Hampshire Board of Pharmacy held its quarterly meeting at Concord, April 25. Of seventeen candidates the following were successful: George H. Sanborn, Alfred B. Stimson, Concord; W. C. Leonard, New London; E. E. Castor, Manchester; Arthur Clarke, Dover; H. L. Benson, West Derry; Dante Smith, Manchester, and D. J. Buckley, Boston, Mass. Next meeting July 25, probably in Manchester.

North Carolina Board of Pharmacy met in Raleigh, April 11 and 12: The following passed satisfactory examinations: W. Hoyle Gardner, Shelby; Howard Gardner, Winston; M. H. Aycock, Lousburg; H. W. Brodoux, Asheville; R. C. McNorton, Wilmington; James E. Shepard, Charlotte; Charles F. Crews, Winston; Harmon H. Perry, Wake Forest. A. W. Rowland, a member of the board, having tendered his resignation on account of declining health, O. M. Royster of Hickory was elected to fill the unexpired term. The next meeting will be held in Asheville a few days prior to the meeting of the A. P. A.

Illinois Board of Pharmacy examined a class of 103 in Chicago, April 10-13, 1894. The following passed as registered pharmacists: W. C. Ballowitz, W. H. Behrens, T. F. Cannon, R. S. Christman, C. K. Cress, J. F. Flske, K. R. Forston, S. G. Frank, P. Fullen, J. C. E. Hagen, B. K. Hollister, P. Mahanes, Jr., F. W.

Keuper, W. M. Nachtway, H. A. Nellson, H. J. Schulte, A. D. Thornburn, E. J. Weeks, H. H. Weissenborn, O. Wintermayer, G. F. Yates, H. J. Zapp of Chicago, H. E. Horrall of Olney, C. R. Jackson of Gibson City, C. L. Krause of Peotone, C. V. Nyman of Batavia and W. H. Schmiedeskamp of South Evans-ton. The next regular meeting will be held at 173 39th street, Chicago, June 12, 1894.

The Missouri State Board of Pharmacy met in Kansas City a few days ago and examined seventy candidates for certificates. Of these only twenty passed, having answered 70 per cent. of the written and oral questions. Fourteen juniors from the Kansas City College of Pharmacy took the examination, but not one of them passed, though they had won honors in college. The following are those who passed the examination: Thomas Bailey, E. P. Fish and W. F. Newton of Lawrence, Kan.; C. J. Fritz, William Richardson, H. E. Roland, B. L. Welsh and G. E. Webber of Kansas City; S. Bronde and H. E. Silverstone of St. Louis, A. Burvenich of St. Joseph, H. T. Clark, Otterville; W. E. Floyd, Slater; M. S. Grigg, Verona; W. W. Gregory, Hughesville; G. Kathan, Trenton; B. Meek, Mound City; M. S. Middlesworth, Iantha; L. L. Walden, Miami, and E. F. Westhoff, La Grange.

California Board of Pharmacy held its regular quarterly meeting April 11, 12 and 13. The following were registered as graduates in pharmacy: W. B. Whitney, Philip P. Moeszinger, W. C. Hassler, Paul A. Derge, E. E. Evans, J. E. Miller and J. R. Cauch. The following named passed licentiate examination: H. J. Wolf, F. W. Carlisle, E. H. Lewis, C. K. McDonald and B. E. Gey. The following named passed assistant examination: A. D. Hill, J. H. Prague, C. L. Caven, S. Sollenberger, H. C. Cox, G. L. Edelman, J. E. Campbell and W. J. McNeill. Registration is due May 5, 1894; delinquent, July 5. The fee for registered pharmacist is \$2; registered assistant pharmacist, \$1. The "Maze," a department store of San Francisco, having had the matter of selling pharmaceutical preparations brought to their attention as being illegal by the Board of Pharmacy, have ceased to retail such articles in the establishment.

Minnesota Board of Pharmacy, at its April meeting, examined sixty-seven applicants, and granted registration as pharmacists to: Frode Arneberg, Emil Anderson, Oscar Oberg, John Goldner, Ephraim Warner, Samuel M. Wendt, of Minneapolis; Frank R. Gallaher, Fred A. Munch, Sherman H. Brownlee, David Shesgreen, Jr., St. Paul; George W. Ittis, Chaska; William A. Kubat, Austin; Louis J. Lundemo, Morris; Willet H. Mosher, Duluth; Edwin J. Stormes, Osseo; Jeppa M. Palmquist, Tracy; Otto E. Fleischer, Fairbault.

Successful applicants for registration as assistant pharmacists were as follows: Herbert W. Hosmer, Frank G. Danielson, Edward A. Trommald, Richard T. Burke, David Gordon, Frank H. Sturgeon, Claus F. Ylander, of Minneapolis; Nathaniel W. Clark, Austin; Wallace F. Gow, Anoka; William S. Wygant, Excelsior; James W. Helsing, Melrose; George W. Meyer, Duluth; Ran-

son F. Pepple, Worthington; Fred H. Richman, Rochester.

One of the features of the examination was the use, for the first time, of the new prescription cases, which have been provided for the practical testing of the men. There were twenty of these cases, and each applicant for a license, as a part of his examination, was required to go to one of them and put up numerous prescriptions. Next meeting in Minneapolis, July 17. The Board recently commenced an action against T. W. Esterly of Minneapolis for violation of the pharmacy law. The case was stubbornly fought. Jury's verdict, guilty, \$50 and costs.

COLLEGES OF PHARMACY.

The Chicago College of Pharmacy held its thirty-fourth commencement exercises April 26, at the Grand Opera House. The valedictory address was by A. D. Thornburn, and the students were also addressed by F. P. Bodinson, Prof. E. M. Goodman and Prof. C. S. N. Hallberg. The Broth prize microscope was won by R. Breves, who, together with F. P. Bodinson, Willis Eugene Coolbaugh, Oscar Hallenberg, Adolph Onesime Kaczorski, William Arthur Stuchlik, John Everett Thomas, Albert D. Thornburn and Franklin S. Wilson, received honorable mention.

President Emil Thiele conferred degrees upon the following students: J. F. Anderson, G. W. Bohn, S. L. Caine, J. W. Chladek, C. C. Cook, C. E. Cress, E. L. Fitch, F. Hunsche, C. L. Krause, R. H. McKenzie, R. W. O'Brian, W. A. Plce, W. H. Rudder, O. U. Sisson, J. Stuchlik, A. D. Thornburn, F. B. Wendt, G. A. Wiley, E. C. Zobel, W. B. Behrens, L. O. Brechdwald, A. H. Christensen, H. A. Delfosse, H. E. Gross, P. Jacobus, J. A. Lorenz, W. M. Nachtway, G. H. Rahts, J. F. Sheficik, F. H. Spiller, W. A. Stuchlik, A. E. Trischmann, F. S. Wilson, F. P. Bodinson, R. Breves, T. F. Cannon, R. S. Collins, W. E. Coolbaugh, O. Hallenberg, A. O. Kaczorski, H. A. Nielson, G. S. Orth, C. A. Roark, F. Seward, C. L. Stillman, J. E. Thomas, H. H. Weissenborn, R. E. Yarnley.

Maryland College of Pharmacy held its forty-second commencement at Ford's Opera House, Baltimore, last month. The announcement of graduates was made by Prof. D. M. R. Culbreth, and the degrees were conferred by the president, Louis Dohme.

The college prizes, consisting of gold medals, were conferred by Prof. William Simon as follows: First prize, Walter Brown Carpenter; second prize, Oswald L. Schreiner; third prize, Samuel LeRoy Robinson; Simon prize, Oswald L. Schreiner; pharmacy prize, Walter Brown Carpenter; junior class prize, Lemuel Charles Ralford.

Henry P. Hynson awarded the alumni prize, a gold medal, to Oswald L. Schreiner. The Rev. Charles H. Cator made the address to the graduates, and Robert Grayson Loy delivered the valedictory. The exercises were interspersed with music by the Opera House orchestra.

The graduates were: Samuel T. Anderson, Jr., South Carolina; Louis M. J. Becker, Maryland; Frank Walker Bell, Virginia; James R. Bivens, North Caro-

linal Herbert Julian Brady, North Carolina; Robert Grayson Lay, Maryland; Martin L. Marsh, Maryland; Edgar Mumma, Maryland; H. Clay McElwee, South Carolina; John J. McInnity, Maryland; Walter Brown Carpenter, South Carolina; Francis J. Clements, Washington, D. C.; Frederick A. Dieterich, Maryland; J. William Dorman, Maryland; Robert L. Felts, Maryland; Samuel Lettroy Robinson, South Carolina; Julian H. Saenger, Louisiana; John W. Schneider, Maryland; Otto Schmitt, Maryland; Oswald L. Schreiner, Maryland; Henry Gann, Georgia; Arthur W. Griffith, Texas; Dorace H. Hayes, Maryland; Julian E. Kaufmann, South Carolina; Charles W. Kammer, Maryland; Charles Stevens, Maryland; William Brink Ten Eyck, New York; James L. Triux, Delaware; Harry C. Valentine, Maryland; Edgar Voeleker, Texas; Ernest A. Knorr, Maryland; William C. F. Lang, Maryland; J. Lewis Leih, Pennsylvania; John T. Watson, Virginia; J. Lewis Way, Maryland; Henry Zwanzger, Maryland. Special Graduate in Chemistry, James B. Watkins.

PHARMACEUTICAL ASSOCIATIONS.

Louisiana State Pharmaceutical Association met in annual session, May 1, at New Orleans, President P. A. Capadua in the chair, Mrs. E. Rudolf, secretary. The president's address congratulated the association upon its prosperity, spoke of the meetings and work of the A. P. A., and the International Pharmaceutical Conference, and particularly urged that fullest support be given to the proposed amendments to the pharmacy law, to come up later for discussion. The treasurer reported a balance of \$246.43. After some committee reports had been received the Committee on Legislation proposed several amendments to the pharmacy law, which were taken up and discussed at length. The amendments provide that none but registered pharmacists, or duly qualified assistants, under the supervision of a registered pharmacist, shall conduct a drugstore or put up prescriptions. Any person 18 years of age may be registered as assistant after two years' instruction from a registered pharmacist, and having passed examinations by the Board of Pharmacy. College diplomas may be accepted by the board at its option. Registration is made biennially; fee, \$1 for registered pharmacists, 50 cents for assistants. Failure to comply with this provision subjects the offender to a fine of \$5, which he must pay before reinstatement. Physicians who operate drugstores must register as pharmacists. The act shall not interfere with the manufacture of proprietary medicines, nor prevent keepers of stores or peddlers outside of a limit of five miles from a pharmacy shop, from dealing in the commonly used standard medicines, if they comply with section 5. Planters are allowed to furnish medicines to the hands employed by them, and to those leasing lands from them. The Board of Pharmacy shall consist of five members, appointed by the Governor from a list of ten names submitted by the State Pharmaceutical Association—three from the parish of Orleans, two from the rural parishes, to

hold office one, two, three, four or five years, the duration of each member's term to be decided by lot upon organization of the board. To fill the yearly recurring vacancy the Governor shall appoint one member from the names of two submitted by the association. Pharmacists shall label all packages of medicine in legible writing or printing. The label shall bear the name and address of the pharmacist, the name of the prescribing physician, and all drugs or medicines which are poisonous, when not ordered by a physician, shall bear on the label a skull and crossbones, and the word "Poison." Heavy penalties are prescribed for violation of any provisions of the act. The State Legislature will be asked to enact the proper legislation in these matters. At the second day's session the Committee on Pharmaceutical Education presented an interesting report, and much routine business was transacted. At the concluding session the following officers were elected: President, Dr. John Gazzo; First Vice-President, N. P. Roux; Second Vice-President E. Goodwill; Recording Secretary, Mrs. E. Rudolf; Corresponding Secretary, J. A. Legendre; Treasurer, E. Laimant; Executive Committee—G. W. McHugh, George Brown, W. M. Levy, Dr. E. U. Bourc and C. L. Keppler. The next meeting will be the second Tuesday in May, 1895.

Monroe County Pharmaceutical Association held a special meeting at Mandeville Hall, Rochester, N. Y., May 3. Rumor has had it for some time that a member of the association was supplying the Dake Drug Company (cutters) with patent medicines and other goods, and that this concern has been unable to purchase supplies since the Detroit Plan went into effect in February. The accused says that when he purchased his store it had the most dead stock of any store in town. Mr. Dake was the only druggist among eighty to welcome him and offer to help him unload this stock. He also said that his boy for the past two years had dally carried goods to and from the Dake Drug Company's store, and it was further explained that the exchange of goods was only on dead stock and not staple patent medicines, as the charge read. The association agreed, if the accused would furnish a list of his unsalable goods, the members one and all would do what they could to reduce it. It was decided that the prices on patent medicines were to be as published by the association in the daily papers. The cutter is being met on his own ground, and some thirty druggists combine to publish in the papers prices which are considerably lower than his advertisements quote. The leading sarsaparillas are sold at 55 cents, 100 three-grain quinine pills for 25 cents and all others at correspondingly low figures.

Illinois Registered Drug Clerks' Association held its second meeting April 21, at Horan's Hall, Halsted and Harrison streets, Chicago. Over 100 registered drug clerks were present, and the membership was increased. A constitution was adopted and the following officers elected: President—Fred Rudnick. First Vice-President—E. R. Bond. Second Vice-President—W. A. Stucklik. Third Vice-President—I. Platt.

Secretary—F. A. Lœmke.

Treasurer—W. T. Winters.

A special committee was appointed to select quarters for the organization in the lowtown district.

The new organization, which is the forerunner of a State association, including registered drug clerks in every city and town in Illinois, is for mutual protection and benefit. The first move to be made is to secure employment for all registered drug clerks in the city now unemployed, of whom, it is estimated, there are fully 100. An additional purpose of the organization is to secure representation for drug clerks on the State Board of Pharmacy. One leading object is to see that the pharmacy law be properly enforced.

To Members of the American Pharmaceutical Association:

The Scientific Section of the American Pharmaceutical Association urgently requests members to inform the committee as to the subjects upon which they will write, and to send their papers ready for printing to the Chairman, not later than June 30.

The Committee would suggest a number of papers upon the following: "Does practical experience with the New Pharmacopœia prove the processes therein contained to be the best?"

L. E. SAYRE, Chairman, Lawrence, Kan.

C. M. FORD, Secretary, Denver, Col.
F. S. HERETH, Associate Member, Chicago, Ill., Committee.

Ohio Pharmaceutical Association meets at Cincinnati, June 5-7. Morning and afternoon sessions on Tuesday and Wednesday; morning session Thursday. Reception Tuesday evening at Grand Hotel, concert Wednesday evening at Odd Fellows' Temple Theatre; boat ride to Coney Island on Thursday afternoon with banquet, etc. A. Wetterstrom, local secretary.

Missouri Pharmaceutical Association holds its annual meeting at Excelsior Springs, June 12-16. There are six prizes offered for papers on special topics, two for exhibits by retail druggists, and others for debates and special displays. J. C. Falk, chairman committee on papers and queries, 1112 Franklin street, St. Louis, will answer requests for further information.

Massachusetts Pharmaceutical Association will meet in annual session at Worcester, June 26-28. Interstate league matters will induce discussion.

Arkansas Association of Pharmacists will meet in twelfth annual session at Hot Springs, June 5-7. Arlington Hotel will be headquarters.

Kansas Pharmaceutical Association will meet at Salina, May 29-31. Reduced rates on the railroads on the certificate plan. Headquarters, National Hotel.

Colorado Pharmaceutical Association will hold its annual meeting in September in Pueblo. C. H. Wells, local secretary.

Minnesota Pharmaceutical Association will meet at Lake Minnetonka, Hotel St. Louis, June 12-13.

New York State Pharmaceutical Association meets at Saratoga Springs, June 26-28.

New Jersey Pharmaceutical Association meets at Asbury Park, May 24-25.

THE LOUISVILLE BOTANICAL CLUB.

The following paper was prepared by Mr. Addison Dimmitt, president of the Botanical Club, to be read at the annual meeting of the Kentucky State Pharmaceutical Association. Druggists will find it full of suggestions and good ideas:

The Louisville Botanical Club was organized Jan. 23, 1890. The object was to unite the pharmacutists of Louisville for their mutual protection and advancement. The work of this club was divided into three departments, viz., Social, Scientific and Commercial Interests. As the Commercial Interests is the topic most absorbing at this time, I will give as brief a sketch as possible, to do justice to the subject, to show how we have made our club what it is to-day, the most perfect local retail druggist organization in the United States.

The original membership list contained only 53 retail druggists. To-day we have 135, out of a total of 140 in our city; added to this we have 14 members from the wholesale houses, making a grand total of 149 members. The five druggists who are not members have agreed (and they live up to their agreement) to be controlled by all prices and regulations adopted by the Botanical Club.

We have never in our club made any distinction between the druggists who are members and those who are not. Our Price Schedule, Monthly Circular and Special Notices are sent to an in the city, thus keeping them posted as to any change in our schedule and all matters touched upon at our meetings. Our monthly circular letter calls the attention of the druggists to our next meeting, states the subject that will be up for discussion at that time, makes a brief mention of what was discussed at the last session and what action, if any, was taken. It also notes the changes in prices of drugs in our local market. By this method every druggist in the city is kept in perfect touch with all the workings of the club.

At the organization of our club the two following rules were adopted, from which we have never deviated:

First—Never to permit anything sectional or political to enter our ranks.

Second—Nothing could be added to our Price Schedule except that which has a fixed retail price, or, in plainer words, we should only control the prices on patent and proprietary preparations and mineral waters.

Our schedule of prices is based on the cost of the preparations, with few exceptions, which are noted in our published list. It places the price on a single package, or three or six of same kind. All soaps, perfumes and toilet articles are excluded from this list, as they are sold by dry goods houses. We have succeeded in establishing fixed prices with these dry goods people on these goods, and, though the prices are not full, yet they still leave the druggist, who may meet them if he desires, a small profit. We have a list of mineral waters covering every kind on the market, with price to consumer by bottle or by the dozen. This we have found very convenient. It relieves us from carrying an

excessive stock, and we can price it to customer and furnish him with it in an hour's time.

We have also adopted several other plans which have proved most excellent. They are as follows:

Night Calls (the following card was sent to all druggists)—"After July 1, 1893, the lowest charge that will be made for night calls will be 25 cents. This action is concurred in by the entire membership of the Louisville Botanical Club, which represents all the druggists of Louisville."

With the card the following explanation was sent: "Note—The object of this card is to do away with unnecessary and unprofitable night work. It will educate the public to the fact that a druggist must not be called except in emergencies. In case of charity and distress, the humane spirit of our profession has the right to assert itself, regardless of any restrictions."

Botanical or general trade mark. The following explains itself:

"Tack this up on your prescription case:
B O T A N Y C R E W X
1 2 3 4 5 6 7 8 9 0 Repeater.

This is to be used when asked to price a prescription, with the possibility of being taken elsewhere, and when giving copies.

"Always put an X under the price mark, thus:

$$\frac{Tn}{X}$$

which will indicate at a glance that it is the botanical or general trade mark."

The object of this is to do away with the practice of shopping with prescriptions. It is a very simple method, and is thoroughly appreciated by our members. By its use we are saved both embarrassment and money. Its effect on the public is good, as it increases their respect for us and our profession.

Discount to physicians of 30 per cent. This was adopted by the club to prevent any possible confusion or misunderstanding between our members. This applies only to regular practicing physicians and dentists, and only on the sale of patent or proprietary preparations.

Dead Stock—A list of unsalable patent or proprietary preparations is sent to our secretary, which he files for convenience of any member who may have a call for an old preparation. This is a good, practical idea, and every druggist avails himself of it.

The most important factor in the success of our organization is committee work, both standing and special. The President annually appoints ten standing committees. The utmost care is observed in selecting members who are qualified, and who will give this work the proper attention. Our object in having so many committees is to distribute the work, as well as to overcome the possibility of a few men controlling the organization, as is the case in most societies. The following are our committees and their respective duties:

Grievance Committee—To whom all reported violations of schedule prices on patent or proprietary preparations and mineral waters are referred. They investigate the matter at once, without using the name of the complainant, and report the result. It has been the experience of this committee that 95 per cent. of the complaints are due to falsehoods

or misrepresentations of customers, and the other 5 per cent. is due to young clerks or errors in marking.

Conference Committee—Whose duty it is to investigate all complaints from retailers of jobbing houses selling to consumers. Their work is done in a like manner to that of the Grievance Committee.

Advisory Committee—Who adjust all differences that arise between the dry goods houses, that sell toilet articles, etc., and the Botanical Club.

The remainder of our committees—Finance, Ways and Means, Membership, Legislative, Social, Scientific and Commercial Interests—indicate by their respective titles the duties of each.

During the Summer months we usually appoint a special committee to visit every druggist in the city, to discuss any important matters that may arise at that time, and to collect the dues in arrears. The idea is, in fact, to let them see they are not forgotten, and the effect is good.

Three or four times a year we have what we call a Social Session, at which we serve punch, sandwiches and cigars. Everything is informal, and we have found them very enjoyable. They bring the members together and give them opportunities of knowing each other, as well as discussing many matters of interest to all druggists. They have been the means, to a great extent, of establishing that feeling of confidence and good will which exists between the members of our club, and which is absolutely necessary to the success of any organization. Our cause has been materially assisted and strengthened by the hearty co-operation of the local jobbers. They are members, attend our meetings and aid us with their valuable suggestions. They further agree to place on the cut-off list any druggist in the city who does not live up to his obligations to the club. They fully appreciate the value of trade that makes a fair, legitimate profit on their sales, and puts them in position to meet their obligations at the end of each month. In return for the assistance they render us, we endeavor to confine our purchases to this market.

We are extremely proud of our club and the good it has accomplished in this short time. We have written this sketch by request, hoping it may prove an incentive to other cities and towns to fall in line. If it should bear fruit, be the means of establishing even a single club, then, indeed, would we feel we had not labored in vain.

But, remember these few points in organizing and developing your society: First, adopt a fixed policy (as was done by our club). Give every druggist the credit of being a man of honor, with a desire to do right. If he does not at once conform to the rules of your club, be patient and reason every point with him (the advantage is all on your side). Show him in a plain, forcible manner that it is detrimental to his own interest, as well as to his neighbor's, to cut prices. If you do not win him to your way of thinking the first time, go again and again, and you will find that right will win in the end.

Do not be influenced by mere hearsay against your brother druggists, but deal solely in facts. Do nothing in your club without first giving every member an opportunity of expressing himself on the subject. Never be arbitrary in your rulings or dictatorial in your manner. If these suggestions are acted upon, you will be surprised to see how soon good results will crown your endeavors, and you will shine, as our Botanical Club—a brilliant example of what can be accomplished by earnest effort and faithful work in a good cause. If any one wishes further information, or our Price Schedule, Constitution and By-Laws, we will be glad to mail them to you.

ORGANIZE! ORGANIZE!

Fellow pharmacists and druggists who have always been looked up to as leaders in your respective localities, now is the time to call together druggists in your vicinity and organize, hold a conference, inviting the wholesale druggists to meet with you, form a city or county club, get in every druggist, then join in a body the Interstate Retail Druggists' League, a national league that is growing fast, but we want you to help us to cover the whole United States. Just take a half or whole day's outing among the druggists of your locality, and have them sign a call to form a club, get all you can to sign, call the meeting, have the meeting, impress upon those who come the necessity for an organized effort not only to protect yourselves from the invasion of the cutter, if he is not already with you, but you need united action to uphold the standard and dignity of your profession. But our principal aim at present is to prevent cutting each other's throats by the underselling of our neighbors in our line; it is far better to take him by the hand and make a fast friend of him than an evil enemy; try it on; get them together, talk over trade matters and how best to improve them, and also our present standing as professional men. Look upward and onward to progress, not down to degradation and disgrace. Now is the time; the iron is hot in the East. Now let us have the West strike it and help us as they were wont to do only a year ago. Come out, you brave drug men of the Windy City and have something besides wind. Shall we have the support of the Western cities, as Cincinnati, Columbus, Indianapolis, Dubuque, St. Paul, Minneapolis, Kansas City, Omaha and San Francisco, that we must and shall have before we quit the game? Make a great effort to call a meeting after getting the signatures of the majority of your neighboring druggists; if first call should fail try again and you will have better success. My advice will be to report proceedings to drug journals only. Have all your members read all the drug publications at hand and keep posted. We are on the right train; get on board before you get left. Yours for profitable business,

A. O. HULL.

President Mortar and Pestle Club of Rhode Island.

TESTIMONIALS MOVING DAY NUMBER.

Detroit, Mich., May 1, 1894.

Editor Pharmaceutical Era.
We are in receipt of your Moving Day number. Allow us to compliment you on the same. It is splendidly gotten up, and certainly a credit to your enterprise. Very truly yours,

MERZ CAPSULE COMPANY.

Louisville, Ky., May 2, 1894.

Editor Pharmaceutical Era.
Your Moving Day number came promptly to hand, and one need but look on the second page of the beautifully lithographed cover and notice the profiles of The Era staff and be convinced at once that The Pharmaceutical Era is the brightest and most modern pharmaceutical journal published. My only regret was the absence of any Interstate Retail Druggists' League matter, since The Era was one of the principal factors in its organization. I hope, however, since The Era is so agreeably situated in the East, that we may have more of its valuable support. Wishing The Era and its staff a long and prosperous career, very truly,
ROBERT J. FRICK, Secretary I. R. D. L.

Leechburg, Pa., May 3, 1894.

Editor Pharmaceutical Era.
Always bright, new and spicy, but the Moving Day number of The Era, which I have thoroughly digested without the least depression, stands in the front rank of pharmaceutical journalism. Long may it live to benefit the fraternity and continue to prove a financial blessing to its proprietors. Very truly,
E. E. HYER.

St. Paul, Minn., May 2, 1894.

Editor Pharmaceutical Era.
Allow me to compliment you on your May 1st number, at hand to-day. I consider it well worth preserving, not meaning to say, however, that I do not preserve all the issues of your valuable journal. That your late move may prove a grand success is the wish of one of your late subscribers.
D. SHESGREEN, JR.

Chicago, Ill., May 1, 1894.

Editor Pharmaceutical Era.
The Moving Day number is far ahead of any drug publication yet issued. Many wishes for success.

A. D. THORBURN.

Belton, Texas, May 5, 1894.

Editor Pharmaceutical Era.
Allow me to congratulate you upon the appearance of your Moving Day number of the Pharmaceutical Era. I think it by far the most handsome drug journal it has ever been my pleasure to receive. Upon tearing off the wrapper, one's first impression is that he is opening the Thanksgiving or holiday number of some of the great magazines—Harper's, Leslie's or the Century. Your outside cover is extremely handsome. When a journal exercises such great care to please its readers, I think it nothing but right to tell it so, "right in the face." A kind word now and then hurts no one, and I think such words are well bestowed upon your May 1st edition. Let the good work go on.
A. J. EMBREE.

Detroit, Mich., May 8, 1894.

To the Editor of The Pharmaceutical Era.
Your "Moving Day Number" of The Pharmaceutical Era is a beauty. Very truly yours,
ACME WHITE LEAD AND COLOR WORKS.

Lynchburg, Va., May 8, 1894.

To the Editor of The Pharmaceutical Era.
Permit me to extend my cordial greetings upon your coming East and bringing The Era with you. If the "Moving Day Number"—which I have just read—is an index of what your every-day numbers are to be, you will deserve and receive the thanks and congratulations of pharmacists and scientists everywhere, for publishing the best-arranged and most varied assortment of useful information, to say nothing of your able editorials, and withal the handsomest journal in the United States. Yours respectfully,
E. A. CRAIGHILL,

Piedmont Drug Mill Company.

Minneapolis, Minn., May 3, 1894.
Editor Pharmaceutical Era.

The May 1 number of The Era is received, and is a marvel of beauty and enterprise, and one would think from its artistic appearance that we were still illustrating World's Fair days. I congratulate you on your success, and know your efforts will be marked and appreciated by the trade everywhere. Sincerely and truly,
A. B. MERRIAM, Secretary N. W. D. A.

St. Louis, Mo., May 3, 1894.

Editor Pharmaceutical Era.
I cannot allow the reception of your "Moving Day" number to pass without personally congratulating you upon it. As to the business character of the change I need hardly speak. From all quarters there has come to you such unqualified commendation that I could hardly add more. Just imagine me saying all that all have said in approval, and besides all that can be said, and I'll not gainay anything. You have taken your journal geographically where it long has been intellectually and commercially, and more than ever I am sure you can say:
"No pent up Utica contracts our powers, But the whole boundless continent is ours."

I make my salaam in profound admiration, and trust you will flourish to the end.
FRANK A. RUF,
President Antikamnia Chemical Company.

Hawley & Hoops, 257-271 Mulberry street, New York, are extensive manufacturers of chocolate, and their advertisement in this issue shows what they have of special interest to the drug trade. Their Extract of Cocoa, or essence of chocolate, is just the thing for making syrups for soda fountain use, and a trial of it will convince the druggist that it is both economical and satisfactory.

Every druggist is interested in new articles of merit, and in this category is included "the latest in cough gums," advertised by Curtis & Son, Portland, Me. Their Fir Balsam Chewing Gum retains all the medicinal properties of the gum and it is presented in novel packages with perfect chewing qualities and delicious flavor. Let your next order for chewing gum include a trial box of Curtis & Son's Fir Balsam Chewing Gum.

MAGAZINES.

The following is a brief mention of the important features of the May magazines:

The North American Review contains two articles of timely interest upon the liquor question, one by Governor Tillman of South Carolina, entitled "The Way to Regulate Liquor Selling," and the other by the Bishop of Chester, entitled "Successful Public House Reform." Political affairs receive recognition in Representative Bland's paper on "The Hopes of Free Silver;" Sir Charles W. Dilke's "Lord Rosebery's Administration;" Edward Porritt's "Bargains in Parliament," F. L. Oswald's "Kossuth's Predictions." The religious topics embrace "Hostility to Roman Catholics," by George Parsons Lathrop and the Bishop of Albany, and "The Unknown Life of Christ," by Edward Everett Hale. Other articles of interest are, "The New Woman," by Ouida; "The Man of the Moment," by Sarah Grand; "A National Health Bureau," by Surgeon-General Sternberg; "Helping Others to Help Themselves," by Nathan Straus; "National Bank Examiners Criticized," by J. M. Graybill; "Anarchy and the Napoleonic Revival," by Karl Blind, and "The Value of Dialect," by Prof. Wauchop.

The beginning of the athletic season and revival of Summer sports make the current number of Outing particularly acceptable. The contents are as follows: "Sketching Among the Crow Indians," "Sharp Time on the Mattawa," by S. C. Kendall; "The Mail Carrier's Daughter," by Jessie F. O'Donnell; "An Angler's Dilemma," by G. C. Audsley; "Spring Snipe Shooting," by Ed W. Sandys; "A Parisian Fishing Ground," by R. F. Hemenway; "A Plea for Association Football," by S. J. Watts; "Afoot in the Hartz," by W. H. Hotchkiss; "Lenz's World Tour Awheel," "A May Day's Trout," by H. P. Beach; "The Club Cup," by W. E. Baldwin; "Combination Rowing and Sailing Boats," by Capt. A. J. Kenealy; "A Memory of Mountain Trout," by R. L. Warner; "Touring in Europe on Next to Nothing," by J. P. Worden; "The Michigan National Guard," by Capt. C. B. Hall, and the usual editorials, poems, records, etc.

The Atlantic has for its principal features "From Blomond to Smokey," by the late Frank Bolles; "The Henry," an article by Prof. T. C. Mendenhall, upon the newly chosen term of electrical measurement; "Three Commandments in the Vulgar Tongue," by Gilbert Parker; "Egotism in Contemporary Art," by Royal Cortissoz; "Where," by R. H. Stoddard; "The Queen of Clubs," by Eliza Orne White; "The Ethical Problem of the Public Schools," by William Frederick Stocum, Jr.; "Henry Vaughn, the Silurist," by Louise Imogen Guiney; two papers upon the late Francis Parkman, by his fellow historians, Justin Winsor and John Fliske; "The Encyclical of Pope Leo XIII.," and installments of the serials, "Phillip and His Wife," and "Talks at a Country House."

The Century begins in the May issue the first installment of what promises to be a notable series of articles recounting

the adventures of two American students during their journey on bicycles from Constantinople to Peking. William Henry Bishop continues the story of his "Hunting an Abandoned Farm in Upper New England;" Brander Matthews writes of "Bookbindings of the Past." Other articles of more than passing interest are: "Contrasts of English and American Scenery," by E. S. Nadai; "The Heart of the World," by W. P. Foster; "A Loan of Half-Orphans," by Thomas A. Janvier; "Old Dutch Masters—Adelbert Cuypp," by Timothy Cole; "The Kearsarge," by James Jeffrey Roche; "Their Exits and Their Entrances," by George A. Hibbard; "Love and Maytime," by Nathan Haskell Dole; "Witherle's Freedom," by Cornelia A. Pratt; "Capture of the Slave Ship Cora," by Wilburn Hall; "Zmai Iovan Ivanovitch, the Chief Servian Poet," by Nikola Tesla; "Paraphrases from the Servian," by Robert Underwood-Johnson; "M. Pate's Only Infirmary," by Richard Malcolm Johnston; "The Imitative Functions and Their Place in Human Nature," by Josiah Royce, and installments of the serials, "Pudd'nhead Wilson," by Mark Twain, and the conclusion of "Coeur d'Alene," by Mary Hallock Foote.

The management of St. Nicholas has hit upon an excellent plan for impressing historical incidents upon its wide circle of young readers, as is shown by the excellent serial, "Decatur and Somers," by Molly Elliott Seawell, the initial chapters of which are given in the current number. Young musicians will be interested in "Ancient Musical Instruments," by Mrs. H. S. Conant; Charles Henry Webb writes of "The Beautiful Ballad of Lady Lee," W. T. Hornaday of "A Few of Our Fur-Bearers;" Dr. Charles A. Eastman continues his "Recollections of a Wild Life;" Palmer Cox conducts the Brownies through New York State on their trip through the Union; Malcolm Douglas writes of "A Model Speller;" Brander Matthews of "Washington Irving;" Charles G. D. Roberts of "Peril Among the Pearls;" Garret Newkirk includes Maine and New Hampshire in a series of "Rhymes of the States;" Agnes Lewis Mitchell tells of "Finding a Treasure," and installments of the serials, "Jack Ballister's Fortune," by Howard Pyle, and "A Four-Leaved Clover," by Mary Hallock Foote, are given.

Popular Science Monthly contains two notable articles of more than ordinary interest to the student in chemistry. One is entitled "Ancient and Mediaeval Chemistry," by M. P. E. Berthelot, and the other is "Waste Products—Cottonseed Oil," by Frederic G. Mather. Other articles of interest are "The Guests of the May-flower," a description of the insects which visit this handsome flower, by Prof. C. M. Weed; "Up the Chimney," by Frank Bolles; "Frost Forms on Roar Mountain," by Mrs. H. R. Edson; "The Ice Age and Its Work," by Prof. A. R. Wallace; "Cause and Effect in Education," by C. H. Henderson; "Economic Uses of Non-Edible Fish," by R. F. Walsh; "Peculiar Sound Effects," by A. A. Knudson; "Religious Belief as a Basis of Morality," by Prof. E. P. Evans; "The Sleep of Mollusks," by Charles T. Simpson, and sketch of Sir Joseph Henry Gilbert, with portrait.

MARKETS.

The fluctuations noted in this market report are those affecting goods in original packages and jobbing lots. A complete price list, showing quotations as made by jobbers to retailers, will be found upon another page under the head of "Prices Current."

Advanced—Opium, Balsam Peru, Blue Vitriol, Corlander Seed, Gum Chicle, Gum Kino, Gum Benjoin, Lycopodium, Menthol, Oil Anise, Quicksilver, Spermaceti, Mexican Sarsaparilla, Tonka Beans.

Declined—Balsam Flr, Caffeine, Codeia, Ergot, Gum Tragacanth (Turkish), Golden Seal Root, American Saffron.

New York, May 10, 1894.—A moderate degree of jobbing activity during the period under review has given the general market a somewhat more animated appearance, and a few of the larger dealers, after of April is fully abreast of the corresponding period last year, and the result has been the imparting of a more confident and hopeful feeling concerning the future. Others, however, are still disposed to report continued dullness, although even with them, the apparently discouraging condition of affairs may be, to a large extent, imaginary, as the fact remains that a liberal amount of stock has been absorbed by the filling of numerous small orders. Another encouraging feature is found in an improved demand for large parcels of several commodities in this department of trade, with values showing a hardening tendency, while the majority of declines are of only minor consequence. Evidence is also furnished showing a slight revival of speculative interest in a number of articles, mainly due to the extremely low prices reached, but nothing has yet been done to materially disturb the legitimate movement into channels of consumption, and the success or failure of the various ventures is largely dependent on influences not yet developed. The prolonged agitation concerning the proposed changes in the tariff law continues to occasion suspense, but the intense feeling of distrust which formerly existed is being gradually eliminated, and the final outcome of the bill will undoubtedly prove to have been liberally discounted. Meanwhile, there is little if any disposition to anticipate the future, and there is not likely to be any general replenishing of depleted stocks until the tariff question is definitely settled. The financial situation continues of a satisfactory character.

OPIMUM—Has recovered from the depressed condition previously noted, and prices have improved to the extent of about 10 cents per lb., but within the past few days the market has developed an unsettled condition, owing to a proposal by the Senate Committee to place the article on the free list in the new tariff bill. As a consequence, buyers have withdrawn and quotations are nominal in the absence of demand.

POWDERED OPIUM—Has remained dull and prices have shown no quotable change, mainly owing to the fact that the declines have not been in proportion to the recent rapid fall in values of the gum.

MORPHINE—Deliveries to dealers having contracts with manufacturers have

abundantly supplied the market, and while Opium continued to decline, some effort was made to force sales by making concessions, but since the recovery in Opium a steadier feeling has prevailed, and full previous prices are again demanded.

QUININE—Manufacturers' prices remain unchanged, but the tone of the market indicates increasing firmness, and the bulk of the stock in second hands is held with considerable confidence. The consuming demand has been fair, and a few good-sized parcels have been taken by pill-makers, but otherwise there are no noteworthy features.

ARSENIC—The stock of White was materially increased by liberal arrivals, and values receded a fraction, but it subsequently transpired that the quality was not up to standard, and prices of prime grades quickly recovered. Saxony Red's is in light supply, but additional stock is expected shortly from primary sources, and an easier feeling is manifest.

BALSAM COPAIBA—Prime quality of all varieties has been finding a good outlet for consumption and with stocks in first hands all absorbed by dealers, a firm feeling prevails, but no changes of consequence have occurred in values.

BALSAM FIR—The market for Canada has continued to rule easy, under the influence of favorable reports regarding the new crop, which promises to be large. The demand has been only moderate, and a further decline of 5 cents per lb. has failed to stimulate interest on the part of consumers.

BALSAM PERU—Stocks have been steadily diminishing, both here and abroad, and a corresponding hardening of values has resulted. The spot supply is closely concentrated, and holders' views are 10@15 cents higher, with offerings limited to actual current necessities of the consuming trade.

BALSAM TOLU—Has met with a fair demand from consumers, and a steady feeling is manifest on the part of sellers, but there is no quotable change in prices.

BLUE VITRIOL—Is in fairly active request, and a fractional advance is noted, with holders indifferent sellers.

CORIANDER SEED—All scattering lots have been taken up, and the entire limited stock is closely concentrated in few hands, and prices have been advanced 1@1-4 cents per lb., with the tone of the market strong, and still higher figures anticipated.

CHILE—Has met with an active inquiry, resulting in liberal purchases by chewing gum manufacturers, and the balance of the available stock is held firmly at an advance of about 2 cents per lb. Advices from Mexico indicate that the bulk of the present season's output has gone forward, and as future shipments will be light, the outlook favors increasing firmness.

CHLORATE OF POTASH—Has ruled dull, and with stocks large and part in the hands of weak holders, the market is more or less unsettled, with the tone easy under pressure to realize.

CASCARA SAGRADA—Has been moving quite freely into consuming channels, particularly prime old, which is in very much reduced supply, and the small parcels remaining are held at slightly higher

figures. There is plenty of new available, but it is moved with difficulty, as consumers give old the preference.

CAFFEINE—Is quoted lower for all sized parcels, with current trading of average volume.

CHLORAL HYDRATE—Reports were had made a general reduction in prices, but the decline had reference only to 1,000-oz. parcels, the smaller lots usually taken by consumers being firmly held at old figures.

CODEIA—There have been two declines during the interval since our last report—one of 10 cents and another of 15 cents per oz. on all sized packages.

COD LIVER OIL—There has been no further quotable change in values of jobbing quantities of the more desirable grades, but inferior or less popular brands have receded slightly and show a lower range. The situation abroad is practically unchanged, and dealers here in want of stock have sent over cable orders for several hundred barrels, which seems to indicate that recent efforts to break primary markets have been unsuccessful.

ERGOT—Is slow of sale, and with keen competition between holders of consigned parcels, the market has a weak tone, with values lower for all varieties.

GUM TRAGACANTH—Turkey grades are about 5 cents per lb. lower, but other varieties are unchanged, and a fair general jobbing movement is reported.

GUM KINO—Is scarce and firmer, with a good consuming inquiry, and quotations are 20 cents per lb. higher.

GUM BENZOIN—Recent transactions have materially reduced the spot supply of the better grades, and holders have advanced their views about 2-2 cents per lb.

GOLDEN SEAL ROOT—Has met with very little attention, and the absence of important demand has influenced an easier feeling and a decline of about 1 cent per lb. in quotations.

INSECT FLOWERS—Prime quality closed Flowers have been in active request, principally from consumers in Canada, and liberal purchases have reduced the available supply to exceedingly narrow proportions, and values are steadily improving. Powder is also moving rather freely, with prices of the better grades firmly maintained.

JALAP—The weakness in this article seems to have disappeared, and a better feeling prevails throughout the market, mainly the result of purchases by dealers of several parcels of new crop from first hands. The bulk of the current season's output has come forward, and the proportion of desirable grades is rather moderate.

KAVA KAVA—Has been in better demand, chiefly for export, but at concessions from previous ruling quotations and the tone of the market is easy.

LYCOPodium—Is firmer, under an improved demand from the consuming trade, and all brands are about 2 cents per lb. higher.

MENTHOL—Is held with increased steadiness, and holders of the limited spot stock are quoting slightly higher figures.

MUSTARD SEED—California varieties are hardening in value, and a fractional advance has occurred, owing to continued

unfavorable reports from the Pacific Coast regarding the new crop, and a liberal business has been done for consumption.

OIL OF ANISE—Has shown increased activity, with the market stronger in tone, based on advices from primary sources of supply of higher values and probable scarcity. The advance here is about 5 cents per lb.

OIL PEPPERMINT—Is moving rather more freely in a jobbing way, and the feeling among holders is decidedly firm, with higher prices anticipated for all descriptions.

PRUSSIAN POTASH—The combination prices for Yellow are unchanged, but deliveries on contracts made previous to the advance are offered from outside holders at concessions of 21-2@3 cents per lb.

PARIS GREEN—On April 21 the combination of manufacturers announced the following schedule of prices:

In Arsenic kegs or casks.....	20
Kings, 100 to 175 lbs.....	20 1-2
14, 28 and 56 lbs., iron cans	
or bxs., net weight.....	22
2 to 5 lb. paper bxs.....	22
1 lb. paper bxs.....	22 1-2
1-2 lb. paper bxs.....	24 1-2
1-4 lb. bxs.....	26 1-2
One to 5 lb. tin bxs. put up to order at an advance of 1-2 cent per lb. over paper bxs. or similar sizes.	

TERMS—Payable July 1, 1894. Discount, 6 per cent, per annum for unexpired time.

REBATES—To purchasers of 10,000 lb. or over, during the season, 3 cents per lb.; 4,000@10,000 lb., 2-1-4; 2,000@4,000 lb., 2; 1,000@2,000 lb., 1-1-2; 500@1,000 lb., 1.

QUICKSILVER—Is 2@2-1-2 cents higher, in sympathy with a corresponding advance in the London and San Francisco markets, and sales are reported at the improved prices.

SENEGA ROOT—Has been moving rather freely on export orders, and the reduced spot supply is held with considerable firmness, but values show no important variation.

SAFFRON—The principal holders of American have reduced prices 3 cents per lb., and the outlook favors still lower figures in view of the near approach of new crop.

SPERMACETI—Has continued to harden under a steady demand from abroad and further advances, aggregating 2-1-2 cents per lb., have occurred since our last report. The spot stock is exceedingly small.

SARSAPARILLA—Mexican is firmer and about 1-2 cent per lb. higher, mainly in consequence of limited available supplies, the stock in first hand being exhausted.

TONKA BEANS—The Angostura variety has met with considerable attention from consumers, and large sales are reported, with a subsequent advance in prices of about 15 cents per lb. Advices from primary markets report the new crop a failure.

W. H. Bowdler & Co., Boston, advise that Crude Beeswax is higher and in good demand. W. H. B. refined continues at old prices as long as present stock lasts. Carnauba Wax is easier, with large lots at 10c. Ozokerite is unchanged.

LUCIUS ELMER SAYRE.

PROF. L. E. SAYRE was born Nov. 2, 1846, in Bridgeton, N. J. At the age of 16, after completing a common school education, he entered as an apprentice the drug store of Robinson & Whitaker of his native city, this establishment at the time being one of the principal ones in that portion of the State. He served two years of apprenticeship and then removed to Philadelphia, where he attended a course of lectures at the Philadelphia College of Pharmacy, graduating in 1866. During his college course, under special instruction, he took up the study of language, thus developing a taste for Latin, which has, in recent years, led to the production of the work, "Latin in Pharmacy and Medicine," suggested and planned by him, but written by a colleague in the University of Kansas, Prof. D. H. Robinson, professor of Latin. After graduation an advanced course in botany was pursued at the Polytechnic College of Philadelphia, and at the same time special study of therapeutics was followed, under tuition of a physician. About this time he entered the store of Frederick Brown of Fifth and Chestnut

streets, Philadelphia, where he was employed as superintendent of the laboratory. From this establishment he went to Henry C. Blair's Sons, Eighth and Walnut streets, where for ten years he was employed as chief clerk or manager. His first enterprise on his own account as a druggist occurred in 1873, at 18th and Market streets, where he associated himself with Jos. P. Remington, who afterward retired from business life, the intention being to manufacture in a large way special pharmaceutical chemicals and preparations.

As one of the products of the house and one of the first of the kind on the market may be mentioned the scale or "labeled" pepsin. During a large part of this latter period he was associated in the Philadelphia College as one of the corps of instructors, or quiz masters, his special branch being that of materia medica.

In 1880, the young man was elected lecturer on pharmacy and demonstrator in the pharmaceutical laboratory in the Woman's Medical College of Philadelphia. In 1885 Prof Sayre removed to Lawrence,

Kan., having been made dean of the School of Pharmacy of the University of Kansas, where he has since remained and where he still lectures on pharmacy and materia medica.

Prof. Sayre has always been an active and aggressive student and a prolific writer. For five years he was editor of the Druggist's Journal, Philadelphia. Of books he is the author of "Organic Materia Medica and Pharmacal Botany," a second edition of which is soon to appear, of "Essentials of Pharmacy," in its second edition, and his name appears in conjunction with that of the author of the "Latin Grammar of Pharmacy" already referred to. He has also been a constant contributor to pharmaceutical journals. He has always been a close student of pharmacy and an acute observer of pharmaceutical practice as it is carried on in this country and abroad. For the purpose of broadening his knowledge and making more extended observations, he has made extended tours in Canada and Europe, becoming familiar with teaching institutions and business establishments.

ENTERED AT THE NEW YORK P. O. AS SECOND-CLASS MATTER.

ESTABLISHED 1887.

THE PHARMACEUTICAL ERA.

EDITORIAL.

JOHN S. MOFFITT.

In the death of John S. Moffitt of St. Louis has passed away one of the younger men but one of the best known in the wholesale drug trade. His entire life has been one of training for the position which he had attained, and which he administered so ably. Mr. Moffitt was a man of sterling business worth of attractive personal character, and his loss will be sincerely felt. The confidence and respect of the drug trade were his, enabling him to build up a large and successful business, and his personal popularity was something unusual. Active in business and social circles, his influence was felt, and his removal will be sincerely deplored. His face will be missed from many a gathering, particularly in the N. W. D. A., and in the State Pharmaceutical Association of Missouri. We would speak a parting word of eulogy of his character, of regret for his early death, and of heartfelt sympathy for his immediate family and relatives.

THE SODA SEASON.

Soda water is king, or very soon will be, though its reign is short and intermittent. There is more or less demand the year round for the refreshing beverages from the soda fountain, but the months of June and July in most sections of the country are relied upon to return the greater portion of the yearly receipts from this source. Perhaps this period may be extended into August, but, notwithstanding, the season is short and every opportunity must be taken advantage of if it is to be made profitable financially. The druggist who has not yet cleaned up his fountain and received his supply of material, should set about it at once or he will find himself unprepared for the sudden demand with which the season generally opens.

We are sure the majority of soda dispensers have already done this, but it is well to admonish the laggards. It is important also that if any specialties are to be presented for public approval they should be brought out with the opening of the season, and the demand for them established as soon as possible, if a profitable business is to be expected. The public is a fickle public, always wanting something new, and the poet's dream of last year must give place this Summer to other fancifully named concoctions. Of course the bases of all syrups and flavors of the fountain are the same, but in their combinations

lies the production of taking specialties, and we presume, many a druggist has been cudgelling his brain for ideas in this direction. The city druggist will reap his harvest before the exodus of the people to the woods, the mountains, the lakes, the seashore, and the next two months will witness the usual Summer activity around the fountain.

EXAMINATION QUESTIONS.

In this issue we publish answers to series No. 3 of our examination questions. Not so many succeeded in answering the required number of questions as in preceding series, and this is no doubt due to the fact that the questions were considerably more difficult than their predecessors. One pertinent point brought out in the competition is that with some contestants there appears considerable lack of knowledge of mathematics, particularly of the principles of proportion and percentage. It may be said right here that in some of our colleges of pharmacy far too little attention is given to this subject, and almost no instruction in the calculation of the percentage composition of chemical formulas. In some of these series of answers, though the work in the main was creditable, the replies to the questions involving these calculations showed a lamentable ignorance in the direction indicated. A practical working knowledge of percentage and proportion is most essential, and we would repeat advice which these pages have borne frequently—that the young man who is studying to qualify himself for pharmacy should be sure that he has a well grounded acquaintance with mathematics so far as the branches named are concerned. The problems presented in the series were not exceptional ones, rather were of a kind which very frequently present themselves for solution, and the young pharmacist should be sure that he is competent to work them out. The comments upon the replies we have endeavored to make of an educational nature, and the student who is a little rusty in the application of mathematics to chemistry and pharmacy will find the explanations given of considerable service. We would again urge that mathematics in particular be not neglected in whatever course of study is mapped out.

A new set of questions is offered, which, though considerably more difficult than preceding ones, is by no means unreasonable, and in no respect catch questions. They require for correct answers thorough knowledge of certain fundamental principles. While we have been exceedingly gratified by the number of responses received, we wish to enlist still greater interest in this department. Whoever will endeavor to make satisfactory reply to any of these series will find that it will require some little study, some little work, however well posted one may be, and those who have not a well-arranged and classified store of information will find that systematic study is necessary for the mastery of the various branches indicated by the questions. We confidently expect an ever increasing interest in the department, and urge young men that they make it a point to answer

the questions of each series to the best of their ability. This work will provide a stimulus to study, and will excite interest which can be aroused in no other way.

THE ALCOHOL TAX AN INCOME TAX.

Mr. Ingram, in his letter on another page, presents the alcohol tax question in a light in which it doubtless has not appeared to the majority of retail druggists. He argues that any increase of tax on alcohol as proposed would fall upon the retailer alone, for, while paying a greater price for the article, he could not, under existing trade conditions and habits, correspondingly raise his selling price to customers. His margin of profit would thus be lessened, equivalent to a direct tax upon him. The Era has always been outspoken in advocating a reduction of the internal revenue tax on alcohol, believing that whatever be the necessities of Government for a working income, this should not be raised by taxing a product so essential to the development of our home industries as is alcohol. The tax should rather be left upon articles which are luxuries or which can better stand an increase. Mr. Ingram proposes that this be accomplished by a tax on beer, and shows how the cost of beer to the consumer will be almost inappreciably advanced, and at the same time the revenues of the Government be greater than were the proposed tax on alcohol to become a fact accomplished. Though very many, doubtless, will not altogether approve of his substitute proposition, there is no doubt that the retail drug trade requires no argument, no further demonstration, to prove that it is not desirable or just to raise the cost of alcohol.

It is proposed that each druggist become a committee of one to prevent the enactment of the proposed regulation, but we would not attempt to prophesy the measure of interest which the druggist will evince. This alcohol question has been presented in innumerable lights, and up to the present there has been no concerted action of the retail drug trade to rid itself of a burden which all assert is unnecessary. The wholesale trade has made spasmodic attempts in this direction, but it requires for success a union of effort and a vigor which have not yet been attained. The manufacturing chemist, the manufacturing pharmacist, the retail druggist, denounce the revenue tax on alcohol as unnecessary and unjustly burdensome. Why cannot all these branches work in union and harmony to the end that this necessity may be obtained at a fair price commensurate with its cost of production. We commend Mr. Ingram's article to careful consideration, believing that his manner of presenting the case will, from its very novelty, occasion interest and prompt to active exertion to remove this heavy burden upon the trade.

THIS SUMMER'S CONVENTIONS.

A few of the State pharmaceutical associations hold their annual conventions during the early Spring or even midwinter, but the majority of them occur within the months from June to October. June and July seem to be the favorites, so that

within the next few weeks the druggists of many of our States will take their annual outing in attendance upon the meeting of the State Pharmaceutical Association. These outings are all the vacation that many a hard-working druggist obtains, and they are, as is proper, made the occasion of invigorating recreation as well as of professional and scientific instruction. Attempts have been made in some of the associations to abolish the amusement feature, but the result has been such a storm of protest and the near prospect of a great falling off in attendance that the move has as a rule proven abortive. We believe that all work and no play makes Jack a dull boy, and the druggist who works hard the year round is certainly dull enough, even without the three or four days for rest and recreation afforded by the State Association Convention. We are believers in these associations, and only wish we could find arguments and proofs forcible enough to bring the entire trade to our way of thinking. The association gathering affords an opportunity not alone for amusement and relaxation from business restrictions, but brings the druggist into contact and communication with his fellows, whereby he may become possessed of new ideas, have his faculties refreshed and sharpened, and return to his business with an interest and ambition calculated to make their possession felt for many a day, to the improvement of his business and to his own professional development.

In the selection of meeting places and in the arrangement of the programme of exercises, business and social, let the fact be well kept in mind that the association meeting is primarily an occasion when the druggist can get out of the tiresome rut and daily routine and find that change which is to be to him a tonic and a stimulus to better work. There is a certain amount of monotonous routine business which must be transacted by the association, but in addition there should be arranged programmes of discussions and the reading of papers from which the members gain many a hint to be put later to practical application. We would urge the druggist to leave his store in the charge of his clerk and take his wife and family to the annual meeting. Go prepared to speak, advance your own ideas and beliefs in the meeting room, and take a fishpole with you, too. We have not spoken of what may be accomplished by the association itself, as a body of druggists in union, for the value of organization has been dilated upon for years in the pharmaceutical journal and in the convention hall. We have preferred to tell the druggist what a good time he misses by staying at home. If you cannot go yourself, however, give your clerk a vacation and urge him to attend.

LET THE GALLED JADE WINCE.

It has been the boast of the cutter that no plan could be devised, or, at least, enforced, which would prevent him from obtaining all the supplies of proprietary medicines which he desired for the conduct of his business. However this may

be, to what extent it is true, it would seem, to judge from the suit brought against the wholesale druggists of Cincinnati by the firm of John D. Park & Sons Company, that it can be made very difficult to procure these articles. We publish the full bill of complaint of this firm, in which they allege unlawful restraint of trade on the part of the Cincinnati wholesalers and the National Wholesale Druggists' Association. While, of course, it is impossible to predict the ultimate decision in the case, it surely is one of great interest and importance to the drug trade. John D. Park & Sons Company have for years persistently refused to adopt any measures for the protection of the retail drug trade against price cutting on proprietary medicines. They have been the depot of supply for cutters throughout the entire country. How they have been able to secure these goods has been a matter of conjecture. But undoubtedly they have, through numerous channels, the retailer himself, perhaps, not being averse to turning a penny of profit, if there be no danger of getting found out, but now it would seem that there is some difficulty in this respect, and naturally the firm are making strenuous objections. The question to be settled is whether or not they are right in the position they assert, and whether they can prove unlawful combination exerted in restraint of their business. They assert that members of the N. W. D. A., by refusing to sell proprietary articles of various manufacturers below certain figures, have caused these manufacturers to fix upon and maintain definite rates outside of which the goods are not to be supplied. Nothing unlawful in this, it would seem, for certainly the wholesale drug trade cannot be compelled to handle a certain article unless they desire, and just as certainly the manufacturer has a right to put his own price upon his goods and sell to whom he pleases.

The plaintiffs object to the cut-off feature, which consists in the publication of a list of the firms and individuals who violate the terms of sale on proprietary medicines, and to whom manufacturers and wholesalers refuse to sell goods. This is a business principle, the application of which is not confined to the drug trade alone, for numerous cases can be cited where the manufacturer of a certain article has refused to sell to those who will not maintain stipulated prices. Is this unlawful? The real legal point involved, if there be any legal point at all, appears to be the exertion of a united influence to prevent the firm in question from obtaining supplies through any source, and the legality of the publication of their name on the cut-off list. Has the N. W. D. A. the legal right to request of manufacturers and wholesalers that their firm be not supplied, and, further, that it be hindered in all possible ways from obtaining the goods? Is this unlawful restraint of trade? The result of the litigation will be awaited with interest, for it is the first time that the matter has been brought to a decided issue, and the decision will establish a precedent for the future.

THE A. P. A. PROCEEDINGS.

The volume of Proceedings of 1893 is a most valuable contribution to pharmaceutical literature. Much of the report of the proceedings themselves is, of course, of but transitory interest, though the suggestions and arguments of the speakers in the various discussions in the sections on scientific matters, education, legislation, etc., are indicative of general progress and highest thought along these lines. But it is especially of the value of that portion of the volume devoted to the report on the progress of pharmacy of which we would speak. To the student of pharmacy and to the active business druggist this report would seem almost indispensable. It is an epitome of the world's work in pharmacy for the preceding twelve months, and this year is arranged in accordance with a plan which makes it more than usually comprehensive and serviceable. These remarks are not intended for a review of the work as generally understood by the term book review, but as an expression of our belief that no more valuable investment can be made by the druggist than that he makes in joining the American Pharmaceutical Association and becoming the yearly recipient of the volume of proceedings. This report on pharmacy is worth many times the annual cost of membership. It does not take the place entirely of pharmaceutical and chemical journals, but it is a key to the periodical literature of the profession. In the present volume is presented an exhaustive list of new remedies, with greater or less detailed description of their methods of production and their physical and therapeutical properties. A complete set of the proceedings of the association may be obtained for a very small sum, and once in one's possession, they would not be dispensed with under any consideration. The volumes of late years are intrinsically worth more than the annual dues even in this day of cheap printing, and, without appealing to the druggist's professional sense, his commercial instincts would find gratification and his business would profit from ownership and use of the work.

THE RETAIL DRUGGIST AS AN ADVERTISER.

A letter presented in our correspondence department is but one of many which have been received, and which evidences the widespread interest which has been and is taken in the numerous papers which have appeared in these columns upon the subject of advertising by the retail druggist. Without a doubt the druggist does not avail himself as he should of the numerous opportunities for effective, trade-winning advertising. The country druggist is contented with the moss-grown, stereotyped card in his local paper. The city druggist relies upon some sort of a window display and cheaply-prepared placards for drawing the passer-by into his place of business. This is the general rule, though there are many exceptions; it is these exceptions which we would hold up as examples of what can be done by persistent and suitable advertising. Those druggists who have made the subject a study have found it pays. It is the experience of

all branches of commercial industries that advertising pays, and the druggist has exceptional opportunities and exceptional material for attractive and effective work. The public look upon the druggist as a man of mystery, and products which are to him but the tools of his trade, of everyday familiarity, are to his customers objects of interest. The ordinary drug store contains a vast variety of articles with which profitable window advertising may be done. This, supplemented by well-considered announcements in the columns of the newspapers, is a factor of highest importance to success.

Opinions as to what is the best kind of advertising for the druggist naturally and of necessity differ very greatly, but if as much attention be given to the subject as is devoted to other branches of the business there can be no question of the ultimate result. For some time past we have published hints upon advertising, and have illustrated methods followed by those who have found success. If the druggist would take a portion of the time which he now devotes to bewailing his lot and wondering how he can get the old-time prices for patent medicines, and devote it to a study of advertising, he would, if experience of others is any criterion, soon find that his position is not quite so lamentable a one as he has generally believed it. The druggist is too prone to encase himself within a professional reserve and expect the people to come to him without direct sollicitation. If he is to be a merchant, as he undoubtedly is, outside of the precinct of the prescription stand he must pursue mercantile tactics, and one of the most successful of these is advertising.

In the columns of the Journal of the American Medical Association recently there has appeared considerable correspondence relative to the publication in the Journal of patent medicine advertisements. The Journal is controlled and maintained by the American Medical Association, and the ethical members claim that it is a violation of the code and derogatory to the professional standing to present advertisements of these secret preparations. At a meeting a few days ago of the Pennsylvania Medical Society there was read a paper entitled, "Should the Journal of the American Medical Association Be Used to Promote Quackery?" The conclusion of a spirited discussion on this paper was the passage of a resolution declaring that if the Journal could not be published without these advertisements it should be suspended. For consistency, advertisements of this nature most assuredly should not appear in the official organ of the national association, but if such a policy should be decided upon and followed out we fear that a large number of physicians throughout the country will not be induced to discontinue the use of proprietary articles, but will keep right on in the course they are now pursuing. It is a statement which we believe can be proven by the examination of the prescription files of drug stores throughout the country, that 25 per cent. of the prescriptions received from physicians specify some sort of proprietary secret preparation, and, resolu-

tion or no resolution, this practice will continue. There is a very considerable element in the ranks of the physicians which is just as gullible regarding the claims of these secret articles as is the general public, and to this element is due a very large share of the patronage accorded these preparations. However, if the American Medical Association will come out flatfooted against proprietary medicines and pursue a consistent course with reference to them it will go a great way in decreasing the evil.

Our English friends are not free from trouble on the score of counter-prescribing by druggists, and the pharmaceutical and lay press often have considerable to say about the matter. The Chemist & Druggist comments upon an article in the *Asclepiad* by Sir B. W. Richardson. He discusses the matter quite fully, but the portion of his paper which is of most interest to us, and which is the subject of our contemporary's particular attention, is that wherein he suggests the institution of a medical diploma for pharmacists who wish to practice counter-prescribing. The qualifications of such men would be the pharmaceutical ones as they now stand, plus all those parts of the present examination for medical license that are not included in the pharmaceutical division; for this combined examination there would be plenty of excellent candidates, if the admission were reasonably accessible. This qualification is to extend solely to counter practice, never to outdoor visiting. It would not give the dispenser the right to sign certificates of death nor the right to call himself a registered practitioner of medicine, but it ought to give him the right to dispense publicly medicinal substances with qualified judgment. This proposition would undoubtedly prove very acceptable to pharmacists, but from the medical practitioner's point of view it is monstrous. There is no prospect of its very soon becoming a certainty.

As announced before in the Era, the Senate of Ohio has approved of the Abbott bill, which proposes to allow, for the period of three months after its passage, any one who has had five years experience in a drug store to become registered as a pharmacist without examination by the State Board of Pharmacy. The bill has just been defeated in the House. The proposition did not meet with favor from any one who appreciates the responsibilities which attach to the profession of pharmacy, and all the pharmaceutical associations of the State and the most enlightened physicians entered earnest protest against it. The Ohio State University Chemical Association characterized it as a degradation to the profession of pharmacy, and an imposition upon the patronizing public, and denounced in the strongest terms this measure, which "proposed to force upon the public incompetent professional men called doctors, who, despite their brilliant intellects, are unable to pass the examination of the Ohio Board of Pharmacy; also a corps of assistants and uneducated managers and proprietors and thereby seriously endangering the

lives of the people." We congratulate Ohio pharmacists upon its defeat.

The other day a young man was arrested up near the Maine border of Canada on the charge of smuggling phenacetine, and upon him was discovered 16 pounds of the article. As he could purchase the preparation in Canada for 3 cents an ounce and it will bring in the States from 50 cents to \$1, he apparently had a very fair speculation. The American agents for this preparation are very active in its protection, and undoubtedly it will go hard with this offender. The article is made by a patented process and is further protected by copyright and trademark. One Eastern paper takes this incident for a text for a few remarks upon the tariff question, and alluded subjects, and asks why it is that the people of the United States should be so thoroughly protected that they must pay a dollar for an article which costs but a few cents to manufacture, and which may be bought just across the Canada border at a third of the price. The tariff question is not all that is involved, but still the query propounded opens up an interesting train of thought and speculation.

CASTOR OIL AS AN ADULTERANT.—Castor oil is employed for the adulteration of copaiba, croton oil, etc. L. Maury (Jr. d. Ph. et d. Ch.) describes a method for its detection in these products. It is based on the reaction which occurs when castor oil is subjected to dry distillation in the presence of potash or soda, sebatic acid and caprylic alcohol then resulting from the decomposition of ricinoleic acid. The sebatic acid obtained by treating the alkaline sebaccate with a mineral acid, is insoluble in cold, but soluble in boiling water. Oleic acid submitted to distillation also yields sebatic acid, but the latter is not produced from poppy or olive oil in the presence of excess of alkali, and it is probable that in this respect castor oil may be peculiar. In testing suspected copaiba, 10 gms. are warmed gently in a silver capsule with as much dry caustic soda. When effervescence ceases, the odor of caprylic alcohol will indicate the presence of any castor oil. Subsequently, the product of the reaction is treated with about 50 gms. of distilled water and warmed to assist solution. When cold the insoluble resin is filtered out and the liquid treated in a porcelain capsule with excess of nitric acid, and then boiled and filtered while hot. On cooling, if castor oil has been present, a white precipitate of sebatic acid is produced, which is soluble in boiling water and precipitated from the solution by sub-acetate of lead as sebaccate of lead. This process is said to detect as little as a few drops of castor oil in 10 gms. of copaiba. In the case of croton oil the method is the same, except that only 5 gms. of oil should be treated and the other substances reduced in quantity by half.

DOSE OF EXALGINE. At a recent meeting of the Paris Academy of Medicine, Du Jardin-Beaumetz stated that the dose of exalgine as commonly stated was too large, it being his belief that it should never exceed 2 centigrams.

[Written for The ERA.]

PHARMACOGENY—ITS SCOPE AND THE METHODS OF TEACHING IT.

By J. O. Schlotterbeck, Ph. C., B. S., Instructor in Pharmacogeny and in Botany, in charge of Materia Medica, University of Michigan, School of Pharmacy.

(Continued from page 395, May 1.)

IV.

Recalling the nature of instruction in pharmacogeny during the first year of the college course, it will be conceded that without that preparation the study of crude drugs as to their identity, purity, quality and substitutions would be most unsatisfactory. The study of Plant Morphology was absolutely necessary for good work in microscopical botany, and the two together are indispensable for the practical work upon crude drugs—the method of studying them forming the subject of this paper.

Practical work in identifying the drugs of the pharmacopoeia continues throughout the entire senior year, and at the close a most rigid review of the entire two years' work is held.

The drugs are taken up in the order given in Malsch's *Materia Medica*—a book having many valuable features—some of which have been added in the last revision. It is a book brimful of facts—the very cream of pharmacognostical facts, with all superfluous matter rejected. It forms an excellent reference book, but a most difficult text book. In some colleges where it is employed it is made a veritable grind, in others it can be and is made an interesting aid to a useful study. It hardly seems possible that any teacher would require his students to burden their memories with the text there given, without varying the monotony by dilating upon the history, distribution, culture, collection and uses; or even illustrating by drawings, charts or herbarium specimens the drugs under consideration. Yet such is the case. Even more—some of them are giving no other opportunity to examine the drugs than through the doors of a museum case.

Unless something is done to interest the student, the study from this book, or any other, is most monotonous. The writer has often wondered how the subject matter is treated, and what is required of the students in other colleges. It requires much thought and study on his part to conceive the best method to pursue. The teacher must place himself in the position of the student, study his needs, meet the difficulties and arrange the work to the end of doing the most possible good in the time available, even though it means increased work and inconvenience for himself.

In this school we endeavor as much as possible to encourage the use of the *Pharmacopoeia*. In pharmacogeny, the pharmacopoeial name is given first. The botanical name is given next—not alone as a name for a thing, but, where possible from the derivation, the name is interpreted to convey some information upon the plant or plant organ. As each lesson is assigned, as many students are given the task of searching for the derivation of the generic and specific names as there are subjects announced. These reports are written in his book by

each member of the class. The specific names may refer to the divisions of the leaves, as *Aralia quinquefolia*, *Hibiscus trilobus*; the form of the leaf, as *Viburnum prunifolium*, *Xanthorrhiza apilovola*; the margin of the leaf, as *Barosma serratifolia*, *B. crenulata*; the direction of growth of plant, as *Gaultheria procumbens*, *Triticum repens*, and so on.

While it is not considered necessary to know the names of all the natural orders to which the various drugs belong, the more important ones, and especially those including a large number of the more common medicinal plants, are discussed with particular reference to their characteristics.

Only to a botanist of much experience would the names of all the natural orders mean anything. Names of plants alone without having contact with them mean very little, therefore why compel the memorizing of orders, the plants of which grow only in tropical countries, for instance?

In the same manner as the derivation of the scientific names was obtained, so the synonyms of the drugs are searched for and reported in class by the students. They are entered in their note books, and although not quizzed upon very closely, form a feature of great practical value in business.

The active constituents of the drugs are next discussed, leaving out of consideration the common, inert constituents common to all plants, and which have been aptly called plant dirt. The chemistry of these active principles is considered in another course by Prof. Stevens.

Although posology is not a part of pharmacogeny, it forms such an essential and indispensable portion of the pharmacist's knowledge that he cannot know it too well; therefore, doses are given whenever advisable.

One can cram the text in Malsch's *Materia Medica* to such an extent that he can give a good verbatim recitation of almost any drug and then have a very poor conception of the drug itself when put to the test of identifying it. In the writer's opinion, those descriptions were no more intended to be committed to memory and recited than are the botanical descriptions in Gray's *Manual*. After having had the drugs to study, having verified the descriptions in the book by his study, and being familiar with the meaning of scientific expressions, the student can give a lucid description in his own words that will mean infinitely more to him than the cut-and-dried ones in the book.

The practice work is conducted as follows:

Liberal samples of the drug to be examined are placed in sliding pasteboard boxes (powder boxes), four of which are placed in a larger box. There is no distinguishing mark of any kind except the student's name on the cover of the large box. At the opening of the hour each student is furnished the box bearing his name, and he at once proceeds to analyze the drugs in the small boxes, by means of the key preceding every decision or classification of plant organs in Malsch. Knives for cutting sections and lenses for examining the grosser structure are constantly employed. The immense value

of the first year's preparation becomes apparent in this work. In order to use the keys intelligently and rapidly, scientific terms must be at the tongue's end, and a knowledge of anatomical structures becomes indispensable. The instructor continually passes round the room to give aid, and questions the students in their work. The result of each determination is written on a slip of paper, signed by the student, and inclosed in the box containing the drug. The reports are examined and a record kept. All sets are rearranged each day, those incorrectly determined returned for a second trial. And so the work continues, until nearly all of the drugs have been analyzed by each individual. After this is completed, all these drugs are placed upon the table in jars, correctly labeled, for a review and self-examination. Never was such interest taken before as this year, each one endeavoring to analyze the four assigned to him within the hour.

One may become very familiar with the appearance of a person by constantly meeting him in public or on the street, without knowing anything of his personal character or disposition. Yet it may happen that, if that person should be differently attired than when you were accustomed to see him, you might not be able to recognize him. Very similar in the study of crude drugs. A student may become perfectly familiar with the external features of certain specimens of drugs by constantly looking at them; yet when he goes out into practice and finds other specimens of these same drugs with somewhat different external characteristics, due to various causes, he may fail to recognize them. Therefore, the drugs themselves must be studied, preferably with the aid of a book, and not from the books alone.

During the last two weeks of the senior year the 300 drugs that have been studied are placed upon the tables for a grand final review, after which the examinations are held.

For illustrating lectures by means of pressed plants a new application of an old principle has been adopted. The cuts on the next page show front and back view of a light wooden frame with glass. There is a space of a quarter inch from the inside of the close-fitting, movable back, so as to admit of specimens with thick underground stems or roots. They are inexpensive, light, easily handled, and protect the specimen against injury while being passed among the class. All specimens can be arranged before class and circulated during the lecture.

To lend more interest to the study of pharmacogeny, one day per week is set aside for the reading of five-minute essays upon subjects assigned by the teacher. To avoid the indifference and inattention on the part of some students, likely to result from such a proceeding, the following plan has been eminently successful: Each student is compelled to write out at the end of his essay all the questions he thinks bear directly upon the subject, and which he believes the instructor would ask him were he examined upon his essay. Essays and questions are read over by the instructor before bringing to class for reading. All questions that

appear to him foreign to the scope of the paper are stricken out, while others of more importance are added. Before the reading of each essay the queries upon the same are read to and copied in note-books by the class. Naturally many of these questions could not be answered by the majority of the class, since the material from which they were obtained was gleaned from much reading in the library. As the class are required to answer the questions after the paper has been read, they will naturally pay the strictest attention during the reading, and follow question after question, as they are being answered during the reading. Moreover, these questions are all written in permanent note-books, and form an excellent method of self-examination, and at the close of the course are all reviewed again by the class with the instructor.

As an example of the nature of this essay writing, the following on "Eucalyptus," by Mr. C. H. Williams, is submitted:

Eucalyptus.

Nothing, in all nature, contributes more to the enchantment of a continent than the presence of stately trees, whose towering heights seem almost to live among the clouds. We stand in admiration before the eucalyptus, whose beauty of form and gigantic size have long been the leading theme of travelers in Australia and in Tasmania. The raging winds meet their greatest foe in these mammoth monarchs, whose branches ascend as high as 300 feet above the earth. It is not uncommon to see numbers of these trees growing side by side, each one being over 200 feet high; and yet here, as also in the other realm of creation, some are dwarfed to the size of a simple bush.

The eucalyptus was first found by the French botanist, Labillardiere, in Van Diemen's Land. This was in 1792. It received classification in 1799, but beyond this, received little attention from scientific sources for many years. Although economically valuable, it is best known by the general reading public on account of its influence when planted in moist, miasmatic regions. It is said to destroy miasma, which causes fever in malarious districts. From this service to mankind it has been called "the fever-destroying tree." The evidence for this property and consequent claim is so strong that it is convincing. Large forests of it have been planted in Europe and throughout the entire world. It thrives well in England and its culture is rapidly spreading in this country. Malarial localities have been rendered healthful by its influence; this rendition is in two ways; first by its absorption, like a sponge, of the stagnant surface water, and secondly by an emanation of an odorous and antiseptic principle from the leaves.

Eucalyptus is official under the name Eucalyptus; its botanical name is Eucalyptus globulus, and it belongs to the natural order Myrtaceae. The generic name is of Greek origin, and refers to the buds being well covered. Globulus indicates the round and numerous globular oil glands which the leaves contain. The Myrtaceae are the myrtle blooms, and are either trees or shrubs. The genus includes

about one hundred and forty species, most of which have been described. They are all evergreens and are variously known as gum trees, wally butta and iron barks. Eucalyptus globulus is the most important. It grows most luxuriantly on hillsides and slopes, and among the wooded hills. The trunk is smooth and gray, the thick outer layer of the bark easily peeling off. The leaves of young trees are ovate with cordate base and acute apex; smooth and pale, greenish blue in color, petiolate and opposite. In trees of older growth the leaves are alternate with twisted petioles. The blade is from six to twelve inches in length, tapering both at apex and at base; they are dull green in color, thick and leathery and supplied with numerous oil glands. Large pinkish or white sessile flowers, sometimes single, but often two or three crowded together on single peduncle. The fruit varies, but the typical form is button-shaped.

When used for medicinal purposes the narrow sickle-shaped leaves from the older trees are the only ones employed. In 1870 extensive and elaborate chemical study was made of the eucalyptus. The results then obtained have since been confirmed. The constituents are chlorophyll, resin, tannin and various inert substances, also a volatile oil. The oil is obtained by distillation, and it possesses the taste and odor of the leaves; it is the medicinal principle, and is said to contain eucalyptol of the formula $C_{15}H_{26}O$, also two terpenes and cymol.

The eucalyptus, at one time, was supposed to contain quinia, or some of the cinchona alkaloids, but more recent investigation has proved this untrue. Farquharson, in his materia medica, says that

oleum eucalypti may take the place of cinchona in medical practice when the discontinuation of cinchona is necessary.

Eucalyptus is used as a febrifuge and physicians in authority have reported it favorably; also employed as a vermifuge. Externally applied, the leaves are rubefacient, and some recommend them for the dressing of wounds instead of lint. The antiseptic power of eucalyptol is said to be greater than that of quinia, and four ounces of the oil in a bushel of sawdust is a good disinfectant.

Extractum eucalypti fluidum and oleum eucalypti are official. The latter is very often adulterated with alcohol and the essential oils of copaiba and turpentine. The alcohol is detected by means of fuchsin, which is insoluble in the pure oil, but readily soluble in that containing small

quantities of that adulterant. The boiling points of the other adulterants are ready means of their detection, as the oil of eucalyptus boils at 170 degrees C., while the oil of copaiba boils at 290 degrees C. and turpentine at 165 degrees C.

The Southern States are introducing the

culture of eucalyptus quite extensively. Especially is this true in Florida. California is never backward in the improvement of her landscapes and in anything that contributes to the welfare of her people. Perhaps her climate is especially fitted for the growth of this tree king, for it grows there with surprising rapidity.

Questions.

1. Give pharmacological preparations of eucalyptus.
2. Give derivation of generic and specific names.
3. To what order do the myrtle blooms belong?
4. Has the eucalyptus any value other than economic?
5. What is the medicinal principle?
6. What is eucalyptol?
7. Are leaves of young trees valuable?
8. Describe a typical eucalyptus leaf.
9. Define the expression, "heterophyllus."
10. Meaning of "pellucid," "punctate."
11. What is sometimes used as an adulterant?
12. Define "febrifuge," "anti-periodic."

[Written for THE ERA.]

SOMETHING ABOUT BACTERIA.

By L. SOLLIMAN, Canton, Ohio.

Bacteria are the smallest-sized organic mischief-makers we are acquainted with, but it is a debatable question whether the noxious action of these microscopic vegetables is not outweighed by their beneficial offices in the domestic economy of this world. It is a settled question that certain bacteria are the primary and only cause of certain diseases, as, for instance, cholera, typhoid fever, diphtheria, anthrax, etc. Other bacteria are always present in certain pathological conditions of organisms, but it is doubted whether they are the cause thereof, for instance, in pneumonia and other inflammatory diseases. It is lucky for humanity that the conditions under which a given bacterium will multiply are exceedingly limited, a slight rise in temperature or a very small change from the alkaline or acid reaction of its diet paralyzing the bacterium or reducing its virulence.

This may serve to explain why certain bacteria will thrive only in given genera of animals and not in man, and vice versa. In cholera, typhoid and gonorrhoea, the bacillus is contagious only to man. The bacillus of swine erysipelas

and chicken cholera do not affect him. It has been proved by experiment that if the blood of an animal is artificially alkalinized it is made susceptible to cholera.

Active bacteria do one or all of the following: They disorganize or interfere directly with the nutrition of their medium. Among their excretions they form certain nitrogenized bodies, which if toxic alone, are called toxalbumens, and ptomaine poisons virtually belong to this class. If these bodies are of a nature to produce the death of the excreting bacteria, they are called antitoxins. The modern "alexins" are of this class. Practical experiments have shown that the symptoms of many diseases can be produced by the injection of these toxalbumens alone, after the bacteria have been carefully removed by proper filtration. Cholera and tetanus and diphtheria bacteria create such toxalbumens. To the antitoxins is due the self-limitation of many contagious diseases. Now, it is a tempting speculation to obtain immunity for an organism by introducing into it the respective antitoxine. Directly this cannot be done, as the cure would be as bad as the disease, but we make use of another fact in the biology of the bacterium. As previously mentioned, the conditions for the thriving of bacteria are limited. By making these just unfavorable enough to allow the bacteria to live, but not live vigorously, we will have a comparatively weak toxalbumen or antitoxin. Injecting this we produce in an organism a mild form of the disease, and in cases just enough antitoxin to prevent vigorous bacteria from thriving in the same field afterward. Just how to do this is the great study of Pasteur, Koch and other bacteriologists. In some instances they succeed by raising the bacteria in unfavorable animals, in others by continued breeding, in the same medium; in others, again, by alternately raising and lowering the temperature of the medium. Such antitoxin by inoculation has proven successful in anthrax. Koch's antituberculin partially succeeded. This freed of materia medica as it might be called, is one of the most promising.

Whilst bacteria are comparatively delicate their spores are very tough. But heat will invariably destroy them, provided it is applied reasonably long. No spore withstands four hours of boiling. Toxalbumens are easily decomposed by dry heat, and whilst I have no data to prove it I strongly suspect that all ptomaines can be made innocuous by continued boiling, and more certainly by dry heat.

It is a startling fact that the bacillus of typhoid fever will live and thrive in a medium containing 1-10 per cent. carbolic acid. It is evident that the strength of a disinfectant is of primary importance. One pint of carbolic acid would not sterilize three barrels of typhoid infected matter. Oxidizing or dehydrating agents require similar consideration, one in 10,000 bichloride left in contact for half an hour kills every known micro-organism.

No bacterium diffuses itself or its spores into the air. It has to be mechanically carried. This may be done by the wind or it may be done by liquids and solids.

[Written for The ERA.]

DRUGGISTS WHO ARE TOO ENTERPRISING.

By Albert Henry.

Mark Twain is somewhat of an iconoclast and more of a humorist when he asserts that the saying, which has been accepted as an aphorism, that "it is dangerous to put all of one's eggs in one basket," is a fallacy, and that it should be amended and the advice changed to the direct opposite; namely, to "Put all your eggs in one basket—and then watch that basket."

We have a druggist in our town who seems determined to have as many baskets with eggs in them as he can get, even if each basket has only one egg. To me he is impressive of a certain kind of enterprise which has infected retail druggists in common with other business men. He is full of push and energy, and when he is talking with me he is always sanguine of the results of his ventures. And in reflecting on his words I sympathize a little in the feelings of a millwright who witnesses a fine water power running to waste, its utility lost through ignorance.

Last Christmas season our druggist thought he saw his way clear to making a good profit on toys, arguing, before the holidays were on, that, as he had the floor space, all he would have to do would be to put the toys on view and customers could select what they wanted in that line without demanding the attendance of himself or clerk. All he would have to do would be to announce the price and take the money. Previous to this development of enterprise, our friend, whom I will call Jones for convenience, had been handling school books. Now the margin of profit on school books is slim, owing to the operations of the book trust, but Jones would prance out with a half-filled prescription to deal out mental pabulum in the form of school books to crowds of restless and noisy urchins, driven to neglect his legitimate business in order that the youngsters might be satisfied and dismissed. The advent of the toys, however, made Jones a veritable Santa Claus, as on every pretext the youngsters, who had grown familiar with the store from purchases of slate pencils, copy books and chewing gum, would crowd in to meddle with the flimsy and gaudy array of stuff provided to gladden the youthful heart. In consequence, Brother Jones or his clerk was always admonishing. From behind the dispensary would ascend a voice as from a sanctuary: "Now, boys, boys! you must keep quiet. If you want to play, go outside."

"Your prescription will be ready in about ten minutes, Mr. Smith."

Mr. Smith (anxiously)—"But, Mr. Jones, I should have it now, and I am really surprised that it has taken so long. Dr. Kurefit told me it would take but a short time to prepare, and to give it to my wife as soon as possible. Can't you help me out?"

"Very sorry, Mr. Smith; I'll do my best. Don't handle those toys, little boy. That popgun is five cents. Now, boys, what is it? If you don't want anything you must go outside. I assure you, Mr. Smith that I am busier this season than at any time in my experience. Returns

are not what they should be, though. I am exceedingly sorry that I have delayed your prescription, but I have been interrupted quite frequently and it was quite unavoidable."

Not satisfied with the toys as a factor in absorbing the odd moments of his time, Mr. Jones put in a stock of fancy stationery and Christmas cards. As a business man I was both amused and vexed that he should be so shortsighted, and a conversation which I overheard when in the village grocery store a short distance away, between two ladies, convinced me that Jones should see the error of his ways in the expression of public sentiment therein revealed:

Mrs. A.—"I wonder what Mr. Jones intends to make of his store? I declare to goodness it's awful. I get so tired waiting in there for anything I don't go in unless I can help it. He's got pretty near a general store in there now."

Mrs. B.—"Yes; I was quite annoyed the other day. I wanted to get a little oil and lime water for Jessie's wrist. She had just given it that bad scald, and there I had to wait and wait, and the poor girl suffering all the time. I was just ready to tell him what I thought of him when Willie—he's only a child, you know—pulled out some of those trumpery toys and broke one of them, which, of course, I had to pay for. I must say that Mr. Jones was very nice about it and was not going to allow me to pay; so, of course, I could not speak to him about his keeping me waiting so long. But I will go to Plodder's after this. I like a drug store where you can be waited on in time."

Not long after this, having occasion to send my little son for a supply of ink, he asked me if he would get it at Jones' drug store. I was on the point of telling him to do so, when my wife interrupted with the protest, "Oh, don't go there; you will have to wait if he has a prescription to fill. The place is always full of idlers at any rate, and I don't want Willie to go there." Willie didn't go there.

Now, if my friend Mr. Jones is not suffering from misdirected energy, I am much mistaken. The incidents and conversations which I have set down are actual facts, the names only being disguised.

The question is, How far should a druggist depart from his legitimate business to make both ends meet? I presume the answer will be, in many cases, "It depends." Would not a discussion of this matter be of profit to the druggists of the country? It appears to me that if contributors would take the matter up and state their experience—their competition, their environment and other matters of detail—some of the principles of business would be distributed advantageously among the clientele of The Era.

ADULTERATED WAX.—The U. S. P. states that "if 5 gms. yellow wax be heated in a flask for fifteen minutes with 25 cc. sulphuric acid to 160 deg. C. (320 deg. F.) and the mixture then diluted with water no solid waxlike body should separate." A separation of a waxlike body would indicate the presence of probably paraffin as an adulterant. Three samples of yellow wax, which had been molded into small squares and cones, contained each considerable proportions of paraffin.

ANCIENT CHEMISTRY.

M. Berthelot, the eminent French chemist, has in late years devoted himself with much persistence to the study of the history of chemistry, for work of which kind his equipment is of an unusually complete character. He has recently published a very interesting work, "La Chimie au Moyen Age," which, being extensively reviewed and commented upon by one of the leading French journals, is made the subject of some very interesting remarks by our English contemporary, the Chemist and Druggist. What the latter says concerning certain branches of the work is of such service and pertinence that we reproduce it below.

The starting point of the alchemic tradition is lost in the mist of ages. Zosimos, the Panopolitan, traces it to the rebel angels, who, seduced by the love of women, betrayed its secrets in return for their favors. For this they were driven from heaven, and thus was founded the race of giants. Tertullian, writing of this tradition, held that the secrets confided to women by the fallen angels related to the art of poisoning, to transmutation, to magical incantation and to working in precious stones.

It is curious how widely disseminated this myth became in the Dark Ages, but it is only part of that blending of early science with religion which all history teaches. In fact, all early science was of a religious character. The temples of the East were the storehouses of learning. All industrial work was inaugurated with magical rites, and the priest was as important as the bullock.

In ancient Egypt alchemy was the "sacred" art and was taught only to king's sons. All Egyptian learning was symbolic, and language is so continually used in a vague and enigmatical sense that it is difficult to define it by precise meaning. The pupils of the alchemists were bound by oath to keep secret all teaching imparted to them. Nevertheless, the Egyptian people possessed a wide knowledge of the working of metals, of alloys, of working in glass and precious stones, similar to that practiced by the alchemists of later ages. A papyrus discovered in a tomb at Thebes gives instructions for purifying, tempering and soldering metals, for making glass, for mixing love philtres, for procuring dreams, and for insuring the success of any undertaking. This papyrus, M. Berthelot believes, contains the oldest known alchemical receipts.

M. Berthelot insists on an intimate connection between Babylonian, Chaldean and Egyptian science. The story of the philosopher's egg appears to have been common to all.

There is preserved in the National Library at Paris a number of alchemical manuscripts of great interest. They were brought into France in the reign of Francis I., who made extensive purchases of books in Greece and in the East generally. They were written in the Greek language and copied in the fifteenth century. A still earlier manuscript is that of St. Mark at Venice. This dates from the eleventh century. It bears marks of loving study and has many marginal notes. Its pages are stained by chemical substances, and its figures are more carefully

drawn than those in the later manuscripts. It probably represents the position held by the occult sciences in the fourth century, or even at an earlier period. Many of these texts were probably written by authors who had seen and studied those priceless works of learning which have been lost to us by the destruction of the Alexandrian Library.

To say that these manuscripts have been discovered by M. Berthelot would be incorrect. Borrichius, a Danish doctor, referred to them in the seventeenth century. They were known to Du Cange and Reinsius. Hoefler published extracts from them in his "History of Chemistry," but it is M. Berthelot who has assigned to them their true importance.

It has been usual to look upon Arabia as the birthplace of chemical knowledge. M. Berthelot claims to prove that this was not so, and contends that the part played by the Arabs, even as transmitters of an earlier knowledge, has been greatly exaggerated. The fact seems to be that Eastern science has come down to Europe in two well-defined streams—one by way of Syria and Arabia, the other from Egypt through the Alexandrian Greeks and the industrial arts of the Roman Empire. A great part of Arabian was of Hellenic origin. The book of Crates is impregnated with Greek ideas, and the same may be said of the authentic works of Geber. The importance of Hellenic influence has perhaps been overlooked through the absence of alchemical symbols in the Arab writings. This is most likely due to Muslim intolerance of everything pertaining to magic. It is a curious fact that alchemical symbols do not appear in the Latin translations of the thirteenth century, and their reappearance at the close of the fourteenth century was owing to the direct influence of Greek authors. The art of distillation, which has been generally attributed to Arabia, was really practiced in Greece centuries before the birth of Geber, and the same may be said of many other processes.

Arabian influence has been exaggerated also in assigning to Arabic authors Latin writing of a later date. There is strong internal evidence that the Latin works of Geber are spurious. His undoubtedly genuine works are full of declamatory and vague idealism, charlatanesque to a degree, but containing philosophical ideas, generally of Greek origin. For instance, he traces an analogy between metals and living beings similar to that which exists between the body and spirit. This corresponds with Aristotelian theories. That Geber was conversant with Greek philosophy is attested by his translation of the logic of Aristotle and other works of a metaphysical character. But the Latin words attributed to him are of a different order altogether. They are scholastic in style and method, and treat of matters unknown to Arabian scholars. In the Alchemy, mistakenly attributed to Geber, the manufacture of nitric acid is described, although its discovery took place long after his death.

Broadly speaking, M. Berthelot maintains that science, properly so called, originated with the Greeks. All knowledge anterior to them was of a non-rational character, steeped in mysticism and sacerdotalism, even when most usefully

applied. But in science, as in literature, the Greek intellect was clear, critical and perceptive. Thus came about the divorce between science and empiricism which elevated the epoch of the eighteenth century to a point beyond which but little progress was made until the end of the sixteenth century. Not that this growth was sudden—superstition dies hard; but charlatanism became discredited by enlightened minds, and had far less sway than in later times, when the antique culture was swamped by the breaking up of the Roman Empire. This enlightened knowledge was transmitted through Syria to its Mussulman conquerors. Syrian scholars translated and edited Greek authors, Aristotle particularly. Alchemy, medicine and astronomy were their favorite studies, and professors of these sciences acquired great influence at the courts of the Byzantine emperors. Baghdad eventually became the seat of important schools. It is to Syrian scholarship that we owe many of the most important alchemical manuscripts scattered through the libraries of Europe. They are generally translations from the Greek, and form the basis of M. Berthelot's historical theories. An important manuscript in the British Museum commences with a list of symbols—the names of the metals and those products of materia medica employed in chemistry. These are identical with those of the Greek authors. M. Berthelot remarks that in this the names of the metals are associated not only with those of the corresponding planets, but also with those of similar Babylonish divinities. Tin is represented at the same time by Zeus and by Bel; copper by Venus and Bilal, or by Astarte; lead by Kronus and by Camosch. The seven earths, the twelve stones employed as remedies and for amulets, the nineteen colored metals used in tinting glass, recall those numerical combinations so dear to the Neo-Pythagoreans and to Orientals generally. There are besides a number of other manuscripts written in Latin which prove that chemistry—particularly as applied to the arts—was practiced long before the Arab influence made itself felt in Europe. These are of an essentially technical character. The "Compositiones ad Tigenda," a manuscript of Luques, contains recipes for tinting mosaics, dyeing skins, gilding iron, writing in gold, etc. Italian jewelers made use of many of these formulae. Recipes also for soldering and for reducing the precious metals to powder are numerous. This was an important art in the Middle Ages, facilitating the carriage of gold from one country to another.

Many of these old manuscripts are really trades manuals and collections of workshop receipts rather than treatises of learning. The Syriac manuscript at Cambridge includes twelve books written by Zosimos, a Greek author, who lived in the third century of our era. These books are lost in the original Greek, but their authorship is uncontested. They treat, amongst other matters, of working in copper, tin, mercury, lead, electrum and iron. Several of these preparations are referred to under the names of their authors, as is the custom at the present day. This,

as pointed out by Berthelot, was quite opposed to Egyptian tradition, which attributed all alchemical works to Hermes. The special interest possessed by many of these ancient texts consists in the fact that they have been completely ignored by the historians of chemistry in past times, and in the light they throw upon European science before the time when Arab learning became prevalent in Europe. A tradition of the manufacture of unbreakable glass runs all through the Middle Ages. It is frequently referred to in these texts and is said to have been discouraged by Tiberius on account of its influence on existing trades. These treatises influenced the whole industrial life of the Dark Ages, particularly in Italy and France. They represent alike the work and the culture of a period extending from the early years of the Christian era to the time when a similar stream of knowledge coming from the same Greek source passed by way of Syria and Arabia into Europe through the medium of the crusades.

PHARMACY.

"BAR."—The German government will introduce the word "bar" (from the Greek, signifying the last heavy quantity), but is undecided whether to apply it to the weight of 10 or 1,000 kilograms.

ALUMINUM BOROFORMATE, which occurs in shining crystals readily soluble in water, has been suggested by Martenson for use as an antiseptic in place of aluminum and aluminum compounds.

TO ABORT BOILS.—

Red oxide of mercury.....3 grs.

lanolin5 drs.

Rub on boil two or three times daily for three or four minutes each time.—Jorissenne.

SOLANINE is the name given by Lloyd (Am. Jr. Ph.) to an alkaloid separated by him from the root of *Solanum carolinense*. Some physical and chemical characteristics of the alkaloid are described, but it is being made the subject of more extended study and will be further reported upon.

ADMINISTERING COD LIVER OIL. Tell the patient to rinse the mouth with aromatic water, wet the interior of a glass, in which the oil should be placed, have the patient drink it quickly. Again rinse the mouth and at once eat something. Paten claims that if this method is followed, the disagreeable taste of the oil is not observed.

MERCURIAL OINTMENT WITH LANOLIN.—Acting upon the suggestion of a physician, a mercurial ointment was made with lanolin to extinguish the mercury, and excellent results were obtained. Five parts of mercury were extinguished with two parts gently warmed anhydrous wool-fat, until globules of the metal were no longer visible through a lens magnifying 10 diameters, and two parts melted benzoinated lard and one part melted stear added, and the whole rubbed until cold. The lanolin, when slightly warmed seems to extinguish the mercury much more readily and rapidly than mercurial ointment or oleate of mercury. The proportion of lanolin may be increased. The physician reported a much more prompt

action with an ointment thus prepared than with one made in the usual manner.

LIQUID CHLORINE IN TUBES. There are now found on the market glass tubes containing 5 grams of liquid chlorine, an amount which will produce 1,000 grams of chlorine water. This convenient novelty, no doubt, will prove very acceptable for the extemporaneous preparation of chlorine water. The product usually found in the stores is of poor quality, for it deteriorates very rapidly upon keeping.

ACETANILID & NITROUS ETHER. Eccles says that these two products may be prescribed and dispensed in combination provided but little of the mixture is employed. It should be used early, for upon standing for a couple of days or so, there is produced a red or yellow color, indicating the formation of anilins.

The length of time necessary for this color change varies with the brand of acetanilid used and the condition and composition of the nitrous ether.

IDENTIFICATION OF LANOLIN. Incorporate 10cc. of concentrated sulphuric acid with 0.1 gram lanolin; there is produced an intensely red liquid of greenish fluorescence, the depth of shade depending upon the purity of the lanolin. Now add 10cc. of chloroform, shake thoroughly, allow to separate; the chloroform solution will be bright red in color, and at the line of separation of the two liquids will be a black line. By comparison with results obtained with a sample of known purity, the approximate purity of samples may be judged.

ARGENTAMINE is a liquid produced by dissolving 10 parts of phosphate or nitrate of silver in 100 parts of water containing in solution 10 parts of diethylamine. In combining with the latter the silver salt loses the power of coagulating proteic substances and of forming a precipitate of silver chloride in the presence of sodium chloride, whilst preserving its antiseptic and astringent action, which is said to be considerably augmented. Argentamine may be diluted with water at will, and it has been successfully employed in place of silver nitrate. (Ap. Ztg., Ph. Jr.)

SODIUM BOROSALICYLATE.—This is a white, opaque mass when carefully kept dry. It dissolves in four times its weight of cold water, and in its own weight of water at 40 degrees. It is also soluble in amyllic, methylic and ethylic alcohols, acetic ether and glycerin, slightly soluble in acetone, but insoluble in ether. Solutions made by the aid of heat remain supersaturated. The product is made by heating together boric acid and sodium salicylate in the presence of water, producing a syrupy liquid, which is evaporated to a transparent, horny substance, and carefully desiccated.

THE ABSORPTION OF DRUGS IN THE FORM OF OINTMENTS.—In the *Repertoire de Pharmacie*, Dr. Luff has published some experiments which tend to show that lanolin is the best ointment basis when a local action only is required, as this substance prevents absorption; while vaseline favors absorption, and so should be employed when it is desired to obtain the general action of the drug applied in the form of an ointment to the skin. The experiments were made with

iodide of potassium, carbolic acid and resorcin mixed with vaseline, lard and lanolin.—Ex.

CREOSOTE PILLS.—Pills made with magnesia do not keep well, the constituents of the creosote acting upon the magnesia, in time forming compounds which do not seem to exhibit the same medicinal action as creosote alone does. Wax makes a very good pill, but it is objectionable because it does not melt at the temperature of the stomach, and because it is digested with difficulty. Pills made with balsam of tolu have passed unchanged through the alimentary canal. Vulpus recommends the employment of powdered licorice root and glycerine, and pills made in this manner have proved very satisfactory to physicians, as have also those made with powdered marshmallow and glycerine. Another good form of administration for creosote is to distribute it in powdered marshmallow or licorice, and fill into capsules in the moist condition without massing.

DENATURATED SPIRITS. A regulation was recently passed by the French Excise, ordering that in future alcohol should be denatured when methylated, by the addition of 50cc. of benzine and 1 gram of malachite green per hectolitre. The color so produced is not deep, but yet sufficiently so to interfere with its useful employment in several processes (celluloid treatment, certain varnishes, etc.). The following simple method of discolorizing it has, therefore, been devised. A few drops of concentrated solution of hypochlorite of lime is added gradually to the alcohol until just decolorized. By careful manipulation no excess of the hypochlorite is used, and as the coloring matter is completely destroyed by the available chlorine, it can never be destroyed, and simple neutral salts of calcium are left, and these in such small amount as to be negligible. Rep. de Phar. (Br. and Col. Dr.)

PECAUANHA ROOT.—The following two methods for the estimation of the alkaloidal value of this root are advocated by Keller (Bull. Soc. Roy., Br. & Col. Dr.), who has examined a number of samples by both methods and obtained very concordant results: (a) The finely powdered drug is exhausted of its fat by means of ether and the residue digested with a mixture of 90 grammes of ether and 30 grammes of chloroform, and after five minutes 10 cc. of 10 per cent. ammonia solution are added. The mixture is well shaken for half an hour, and 10 cc. of water added, and the shaking continued for a few minutes. One hundred cc. of the clear solution is now poured off and the ether and chloroform and ammonia are evaporated. Finally the residue is washed with ether and weighed or titrated. (b) The fatty matter is not eliminated, but the whole is at once treated with ether, chloroform and ammonia; 100 cc. of the clear alkaline solution is agitated with 1 per cent. hydrochloric acid solution and the acid solution separated from the ethereal layer. This is repeated three times, and the united acid liquors are rendered alkaline with ammonia and agitated with chloroform and ether to wash them. The clear liquid is then evaporated to dryness and weighed. The results obtained by the two processes agree, well to 1-10 per cent of alkaloid.

FORMULARY AND QUESTION BOX.

The object of this department is to furnish our subscribers with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION. To insure answer in the next number, queries should be in our hands *ten days* prior to the date of issue.

UNANSWERED QUERIES.

E. G. I., J. H. S. and W. E. M. must grant us indulgence until our next issue, for lack of time to make the necessary investigations prevents reply in this number to their inquiries.

6203. Artificial Extract Raspberry.
(C. L. G.)—See query No. 5,984, Feb. 15 Era, page 163.

6204. Extract of Pine.
(W. A. C.) asks what to dispense when "extract of pine" is wanted for a rubefacient. The term is rather an elastic one, and may mean turpentine, which is rubefacient in its action, or again, it may mean some one of the pine resins dissolved in alcohol. Perhaps some one of our readers can throw a ray of light upon the subject?

6205. Dandelion Insect Powder.
(G. C. R.) This insect powder is prepared from the flowers of the *Pyrethrum Cinerariaefolium*, a plant formerly exclusively grown in the Orient, but now largely cultivated in California. The powder produced from the flower grown on the Pacific coast, is said to be superior to that grown in Dalmatia, on account of the care given to the preservation of the color and of the volatile oil during drying. For detailed description of the different varieties of insect powder, how prepared, constituents, etc., see U. S. Dispensatory, page 1662.

6206. Prescription Query.
(G. E.) asks if it would be proper to use a little acacia to emulsify the following prescriptions; or should they be dispensed as written?

- (1) Carbolice acid.....1 ounce.
Yaseline1 ounce.
Bay rum1 ounce.
Mix and use externally.
- (2) Yaseline1 ounce.
Bay rum1 ounce.
Mix and use externally.

As acacia is incompatible with alcohol and alcoholic preparations, it would not emulsify either one of the above mixtures. Each can be shaken together upon warming, which, no doubt, is the way the prescriber expected them to be dispensed. Each should be dispensed as written.

6207. Iodoform Emulsion.
(Subscriber.)—In referring to the formula for this preparation, given on page 545, Dec 15, 1893, Era, asks if heating the mixture to a temperature of 133 degrees C. (271.4 degrees F.) does not decompose the iodoform. At 115 degrees C. iodoform melts, and sublimes partly unaltered, but heated with water it volatilizes with the vapors of the water without decomposi-

tion. In this instance, with starch, glycerin and water the density of the mixture is so increased as to retain the iodoform at a high temperature without decomposition. It is very necessary, however, that the mixture be gradually heated with constant stirring. By the use of heat the iodoform is thoroughly disseminated throughout the emulsion, the glycerin preventing any appreciable loss by decomposition or volatilization. The preparation is said to be very stable and contains about 10 per cent. of iodoform.

6208. Mead Extract.
(W. D.)—Try this one:
Mace 8 ounces.
Cinnamon 8 ounces.
Black pepper 8 ounces.
Nutmeg 4 ounces.
Cloves 4 ounces.
Grind the drugs to moderately fine powder, macerate in one gallon dilute alcohol for 30 days, and filter.

A "tonic mead" may be prepared from the above extract as follows:
Strained honey 1½ pints.
Extract mead 4 ounces.
Acid solution phosphates. 4 ounces.
Extract vanilla 1 ounce.
Infusion soap bark (2 ounces to pint) or solution of gelatine (1 ounce to pint) 1 ounce.
Syrup 1 gallon.

6209. Cleaning and Polishing Tinware.

(A. E. G.)—Acids should never be employed to clean tinware, because they attack the metal and remove it from the iron on which it forms a thin coat. Articles made wholly of tin or tinned iron may be cleaned by first rubbing them with rotten stone and sweet oil, finishing with whiting and a piece of soft leather. In a dry atmosphere polished tinware will remain bright for a long period, but it soon becomes tarnished in moist air. Here are three methods for polishing:

- (1) Vienna lime applied with a linen rag.
- (2) Use whiting and water with a chamolis skin.
- (3) It is said a fine finish may be given to tin by burnishing, the burnisher being wet with oxgall diluted with water. Wash with water containing a trace of tartar and dry.

6210. Calomel and Sodium Bicarbonate in a Prescription.

(R. C. B.)—Asks criticism upon this prescription:
Calomel 6 grains.
Sodium bicarbonate 20 grains.
Bismuth subnitrate 20 grains.
Mix and divide into 10 powders.
All carbonates and bicarbonates reduce calomel to mercurous oxide, hence, such a combination is incompatible. When dispensed in dry powders like the above the reduction takes place very slowly, a gradual coloration showing that such a change is being accomplished. Another change likely to occur is that between the bismuth subnitrate and the sodium bicarbonate, the reaction being represented by the following equation:
 $2 Bi O N O_3 + 2 Na H C O_3 = Bi_2 C_3 C O_3 + 2 Na N O_3 + C O_2 + H_2 O$

Though the prescription is chemically incompatible, it represents a combination very frequently prescribed.

6211. Artificial Extract Strawberry.

- (1) (C. L. G.)—
Pineapple oil.....11-2 oz.
Tincture orris root..... ¼ oz.
Tartaric acid..... ¼ oz.
Alcohol 1-1-2 pints.
- (2) Deodorized alcohol40 fl. ozs.
Pure strawberry juice.....20 fl. ozs.
Raspberry essence10 fl. ozs.
Pineapple essence 5 fl. ozs.
Acetic ether 5 fl. ozs.
Tincture orris root.....5 fl. ozs.
Butyric ether 5 fl. ozs.
Acetate of amyl 3 fl. ozs.
Butyrate of amyl..... 2 fl. ozs.
Nitrous ether..... 1 fl. oz.
Formic ether 1 fl. oz.
Oil wintergreen 1 fl. oz.
Acetic acid 1 fl. oz.
Glycerin 1 fl. oz.

See reply to query No. 5984, Feb. 15, 1894, Era, page 163.

6212. Iron Pyrophosphate and Quinine Sulphate in a Prescription.

(C. E. B.) asks how he can effect complete solution of all of the ingredients in the following prescription, and how he can make them remain so dissolved:
Iron pyrophosphate..... 4 drams
Quinine sulphate1 dram.
Compound tincture of gentian 5 ounces.
Compound tincture dandelion 3 ounces.
Strychnine (dissolved in 1 dram acetic acid).....1 grain.

A complete solution of iron pyrophosphate cannot be readily effected without remodeling the prescription and introducing into it a certain amount of water in which to dissolve that salt, as it is insoluble in alcohol and strongly alcoholic solutions. Our method of procedure would be to first dissolve the iron pyrophosphate in 1-2 ounces of water by the aid of heat. In a mortar triturate the strychnine and quinine with the acetic acid, gradually adding under trituration the compound tincture of dandelion and about 2 ounces of the compound tincture of gentian. To this latter solution add enough water of ammonia to neutralize the acid, and then add the solution of pyrophosphate of iron. Finally, add enough of the compound tincture of gentian to complete the desired quantity, or 8 ounces. In whatever manner prepared, the mixture can hardly be called elegant or be made permanently stable.

6213. Shampoo Cream.

(G. C.)—The following may prove satisfactory:
Borax 2 ounces.
Glycerin 1 ounce.
New England rum.....15 fl. ounces.
Bay rum.....10 ounces.
Whites of eggs..... No. 2
Incorporate the borax in fine powder with the glycerin, and add the bay rum and New England rum gradually and with constant stirring. The previously well-beaten white of egg is added, and the whole stirred thoroughly until an even mixture results.

If a shampoo cream of an unctuous consistency be desired, try this one:

- Lard 7 parts.
- Caustic potassa 2 parts.
- Water 3 parts.
- Glycerin a sufficiency.

Melt the lard in a porcelain vessel over a salt-water bath; dissolve the potassa in the water, and run the lye formed very slowly into the melted grease, stirring thoroughly all the time, until saponification is completed. Then add some desired perfume and enough glycerin to render the mixture of the right consistency.

6214. Sanitary Lotion.

(F. M. Z.)—We cannot give you a formula for the proprietary preparation you name. Perhaps one of the following formulas for an antiseptic lotion may answer your purpose:

- (1)
- Thymol 1 part.
- Alcohol 30 parts.
- Glycerin 20 parts.
- Water 100 parts.

Dissolve the thymol in the alcohol, add the glycerin, and, lastly, the water.

- (2)
- Menthol 0.2 grams.
- Thymol 0.5 grams.
- Boric acid 0.2 grams.
- Sodium benzoate 1 gram.
- Sodium salicylate 1 gram.
- Oil gaultheria 6 drops.
- Oil eucalyptus 18 drops.
- Glycerin 15 grams.
- Water, to make, 188 grams.

The Era has from time to time published many formulas of preparations for a similar purpose, and you should have no difficulty in finding additional information upon consulting the various indexes.

6215. Solubility of Menthol in a Prescription.

- (C. E. M.) submits this prescription:
- Pure water, 1 ounce.
 - Solution cocaine (10 per cent), 48 grains.
 - Solution antipyrine (5 per cent), 24 grains.
 - Menthol, 5 grains.
 - Oil of cloves, 3 minims.
 - Ether, 20 minims.
 - Glycerin, 1 dram.

He says he dissolved the menthol in the ether, adding to the solution the oil of cloves, glycerin and the solutions of cocaine and antipyrine in the order named. Upon the addition of the water the mixture became cloudy, and so remained. By substituting alcohol for one-half of the water a clear solution was obtained. Does such addition alter the efficiency of the prescription? The cloudiness you have observed is due to the insolubility of the menthol in the water. The mixture is intended for a dental anaesthetic, to be injected into the gums, and you would hardly be warranted in so changing the character of the solvent without consulting the prescriber. The addition of so great a quantity of alcohol is likely to produce severe local irritation. By using only enough menthol to make a saturated solution you may be able to get a clearer and more transparent mixture.

6216. Precipitate in Basham's Mixture.

(G. C. R.)—If this preparation be properly made you will have no trouble with

it. The precipitation you notice is due to alkalinity of the solution of ammonium acetate. The directions for preparing this solution are that ammonium carbonate be added to the dilute acetic acid till the latter is neutral. You have probably gone too far, and have an alkaline solution. In making the Basham's Mixture you are told to add dilute acetic acid to the solution of ammonium acetate, for the purpose of having a decidedly acid solution before adding the tincture chloride of iron, but this amount of dilute acid in your case was evidently insufficient to overcome the excessive alkalinity of the ammonium acetate solution, hence as soon as the iron was added precipitation took place. If all the ingredients of the preparation are of strictly U. S. P. quality you will have no trouble. The mixture should, however, be freshly prepared when wanted for use, as upon long standing it is liable to deteriorate.

6217. To Clean and Polish Brass.

(A. P. F.)—We think you can make a selection from the following:

- (1) Dip the articles in a mixture of one part of nitric acid and one-half part of sulphuric acid; then rinse in water; and finally rub with sawdust. If greasy, dip the brass first in a boiling hot solution of potash lye.

(2) A weak solution of ammonia in water makes an excellent wash. Apply it with a rag; dry with a piece of chamois, and afterward rub with a piece of chamois and a very small quantity of jeweler's rouge.

(3) Place 2 ounces sulphuric acid in an earthen vessel and add 1 quart cold soft water; after the heat has passed off, add 1 ounce each of tripoli and jeweler's rouge. When well mixed, put in a bottle for use.

(4) The Scientific American Cyclopaedia gives the following under the title of Magic Polish for Brass: Sulphuric acid 20 parts, pulverized bichromate of potash 10 parts; dilute with an equal weight of water; apply well to the brass; wash well with water, immediately wipe dry and polish with rotten stone.

(5) Rotten stone 4 ounces, oxalic acid in fine powder 1 ounce, sweet oil ½ ounce, turpentine q. s. to make paste,

6218. Palatable Cod Liver Oil.

(J. M. S.)—According to a statement made by Eisenschitz a palatable cod liver oil can readily be prepared by mixing a solution of saccharin in acetic or strawberry ether with the oil. Only refined saccharin—that is, pure sulphimide of benzoic acid—answers the purpose. Saccharin is readily soluble in acetic ether, and the solution clearly miscible with cod liver oil. A cod liver oil is used which has been filtered a number of times through charcoal. The authority named recommends the preparation of four kinds of palatable cod liver oil, employing a 1 to 10 solution of refined saccharin in acetic or strawberry ether. For the first kind he uses 1 part of the saccharin solution to 50 parts of cod liver oil. A second kind is made by adding 2 drops of peppermint oil to every 100 grams of the sweetened oil. A third is made by using 3 drops of cinnamon oil to 200 grams of the sweetened oil, while a fourth is made by mixing with the oil a solution of saccharin in strawberry ether instead of that in acetic ether. The last preparation looks like a thin emulsion, but is claimed to be the most

palatable one of the four. The treatment of the cod liver oil with freshly burned charcoal, allowing it to remain in contact under the exclusion of air for some length of time, has considerable to do with one's success. It is stated that the treatment of good oil with the charcoal is enough in itself to remove every trace of disagreeable odor and taste, and that cod liver oil treated in this manner has a mild and agreeable taste and is distinguished by its stability.

See also query No. 5063, July 1, 1893, Era, page 15.

6219. Ink to Be Covered with Sizing.

(W. H. W.)—The following is said to produce a satisfactory article: Shellac 15 parts, borax 8 parts, gum arabic 8 parts, lamp black 10 parts, water 130 parts. Add the water to shellac and borax, both finely pulverized, and boil with constant stirring until all the shellac is dissolved. Filter the solution through blotting paper. Mix the gum arabic, in fine powder, with the lamp black in a mortar. Put the mixture of gum arabic and lamp black into the vessel used for boiling the shellac, borax and water, and after pouring some of the filtered fluid over it, heat to boiling. When all the gum arabic is dissolved gradually add, with constant stirring, the rest of the fluid and set the whole aside for a few days to allow the coarser particles of the lamp black to settle. The finished ink is carefully decanted or siphoned off from the sediment.

A very resistant writing fluid is also obtained by simply boiling shellac with water, the lamp black being only added to impart a darker color to the ink. As a substitute for the lamp black the decoction of shellac and borax may, after filtering, be mixed with a corresponding quantity of indigo-carmin, or of a very concentrated logwood chrome ink.

For red you can substitute eosin for the lamp black in the last formula.

6220. Root Beer Extract.

(W. D.)—The following formula may answer your purpose:

- (1)
- Fluid extract of American sarsaparilla, 10 fl. drams.
- Fluid extract pipsissewa, 10 fl. drams.
- Fluid extract wintergreen 4 fl. drams.
- Fluid extract licorice, 4 fl. drams.
- Oil of wintergreen, 48 minims.
- Oil of sassafras, 24 minims.
- Oil of cloves, 12 minims.
- Alcohol 10 fl. ounces.

Mix 9 gallons of warm water, 1 gallon of refined molasses and 1 quart of yeast; add the above "extract" and set aside in a warm place to ferment. The yeast and fermentation may be omitted the extract being mixed with 10 gallons of water charged with gas and drawn from an ordinary soda fountain.

Here is another formula taken from the Era Formulary:

- Oil wintergreen 4 ounces.
- Oil sassafras 4 ounces.
- Oil anise 2 ounces.
- Oil orange 2 ounces.
- Oil nutmegs 4 drams.
- Oil cloves 4 drams.
- Tincture vanilla 1 pint.
- Fluid extract sarsaparilla 4 pints.
- Fluid extract licorice, 4 pints.
- Fluid extract ginger, 2 pints.

Fluid extract albaea 2 pints.
 Fluid extract angelica 8 ounces.
 Fluid extract soap bark 8 ounces.
 Syrup 30 gallons.
 Syrup 30 gallons.

A "head" or "foam" may be given to beverages by adding a solution of gum arabic, gelatin, egg, albumen or infusion of soap tree bark to them before they are carbonated. Beverages made from drugs rich in saponaceous principles, like sarsaparilla, ginger, etc., rarely need any additions to make them hold their "foam" when drawn.

6221. Black Lead for Pencils.

(J. A. C.)—Black lead for pencils is usually prepared by one or other of the following methods:

(1). The blocks of plumbago are exposed to a bright red heat in a closely covered crucible, and are afterward sawed into minute sticks and mounted in cases of cedar or satin wood.

(2). The plumbago, in powder, is calcined as before and then mixed with an equal or any other desired proportion of pure washed clay, also in powder, after which the mixture is reduced to a plastic state with water and pressed into grooves cut on the face of a smooth board or into well-greased wooden molds, in which state it is left to dry. When dry the pieces are tempered to any degree of hardness by exposing them, surrounded by sand or powdered charcoal, to various degrees of heat. The crucible is not opened until the whole has become cold, when the prepared "slips" are removed and mounted as before. This method was invented by M. Conte in 1765.

(3). The dough or paste prepared as last is reduced to the required form by forcing it through a perforated plate (in a similar manner to that adopted for colored crayons) or into minute metallic cylinders, from which it may be readily shaken after it becomes partially dry. The leads for some varieties of drawing pencils are immersed for a minute in very hot melted wax or suet before mounting them. To the composition for others a little lampblack is added to increase and vary the degree of blackness.

6222. The Manufacture of Oxygen and Peroxide of Hydrogen.

(S. C. E.)—So far as we are aware there is no one book devoted to the manufacture of either oxygen or peroxide of hydrogen. You will best gain a knowledge of the subject by consulting the files of different technical journals and books devoted to the subject of applied chemistry.

Oxygen may be obtained on a small scale very readily by simply keeping in a close retort a mixture of four parts of potassium chlorate and one part black oxide of manganese. If large quantities are desired the continuous process of T. Du Motay may be employed.

The process is thus technically described in the *Cyclopedia of Receipts*: "The principle resides in the fact that the manganates and the permanganates of potash, soda or baryta, the ferrates and the chromates of the same bases, and in general all metallic oxides and acids which will form, with potassa, soda or baryta, binary compounds capable of superoxidizing, possess the property of yielding their oxygen at a more or less elevated temperature when

they are submitted to the action of a current of steam. These bodies, thus deoxidized, also possess the property of reoxidizing themselves when they are exposed to a temperature more or less great. The atmosphere is therefore the constant source from which the oxygen is derived. The mode of operation is the following: One of the binary compounds just enumerated is placed in a distilling vessel, whether at the maximum or minimum state of oxidation. If the compound is in the latter condition it is oxidized by means of a current of air mechanically drawn over it. If at the former stage it is deoxidized by means of a current of steam. The oxygen and steam, on issuing from the mouth of the retort, pass together into a condenser, where the steam is separated by condensation, while the oxygen passes over into a gas holder and is there collected. When all the utilized oxygen has been disengaged by the steaming process the action of superoxidation by means of the air current is recommenced. By this alternate process the oxygen is generated as long as may be required."

See also Era of Sept. 1, 1893, page 202, and Era of Dec. 1, 1893, page 504.

The preparation of peroxide of hydrogen commercially on a large scale is a complex process and hedged in with precautions to insure the production of an article of definite strength, purity and efficiency.

Hydrogen peroxide may be prepared—

1. By the action of dilute hydrochloric acid on barium peroxide, thus:

2. By passing a current of carbonic acid through water, and gradually adding barium peroxide in small quantities:

3. The most generally adopted, by decomposing pure barium peroxide with dilute sulphuric acid, thus:

Watts gives the following account of this manufacture, taken from Thénard: "Pure baryta is prepared by igniting, in a porcelain retort, nitrate of barium free from iron and manganese. The baryta broken into pieces about the size of a nut, is then put into a coated glass tube and heated to low redness, while a current of oxygen gas, free from carbonic acid and dried by means of quicklime, is passed over it. For the first eight minutes the gas is eagerly absorbed by the baryta. After it has begun to escape from the farther end of the tube (to which a glass delivery tube passing under water is fitted), the steam is still kept up for the space of ten or fifteen minutes. The peroxide of barium obtained by this process is, after cooling, preserved in a bottle. In the next place 500 grm. of water are mixed with as much hydrochloric acid as will neutralize 15 grm. baryta. Into the liquid, contained in a cylinder, or better, in a dish of silver or platinum, kept cool by surrounding it with ice, 12 grm. peroxide of barium, slightly moistened and rubbed up in an agate mortar, are introduced by means of a wooden spatula; on agitating or stirring the liquid with the pestle the whole dissolves completely and without effervescence. The baryta is next precipitated by sulphuric acid drop by drop till slightly in excess; the presence of an excess of the acid may be known by the sulphate of bar-

ium falling down more quickly than before. Twelve grm. more of the peroxide are then dissolved in the same liquid, and likewise precipitated by sulphuric acid. The liquid, which now contains hydrochloric acid, sulphuric acid, a large quantity of water and a small quantity of peroxide of hydrogen, is next separated from the sulphate of barium by filtration, the precipitate washed with a little water—and the last wash water retained for future washings. The filtrate is again mixed as above, twice with peroxide of barium and twice with sulphuric acid. The filtration is then repeated, and the process continued in the same way till 90 or 100 grm. of the peroxide are consumed. The liquid thus obtained would, on decomposition, yield 25 to 30 measures oxygen gas. To separate silica, alumina, sesquioxide of iron, sesquioxide of manganese, etc., which proceed from the porcelain retort in which the nitrate of baryta was ignited, the liquid is mixed with concentrated solution of phosphoric acid (2 or 3 parts of phosphoric acid to 100 parts of peroxide of barium), then surrounded with ice and supersaturated with powdered peroxide of barium; silica, and the phosphates of iron, manganese and aluminium, then separate rapidly in flakes, and must be removed from the liquid by filtration through linen, and if necessary through paper. The presence of a large quantity of sulphate of barium renders the filtration difficult (if no phosphoric acid were present the sesquioxides of iron and manganese would fall down by themselves and give rise to a rapid evolution of oxygen gas; but when they are mixed with phosphoric acid they do not produce this effect). Should the liquid contain portions of these oxides they must be separated by the addition of a slight excess of baryta water; whereupon the liquid must be immediately and rapidly filtered through several filters at once, and the filters squeezed between linen to get all out. The whole of the baryta must then be separated by carefully adding sulphuric acid in very slight excess and filtering. The filtrate now contains nothing but water, peroxide of hydrogen, hydrochloric acid and a very little sulphuric acid. To separate the hydrochloric acid the liquid is surrounded with ice and mixed with sulphate of silver. In the first place sulphate of silver, obtained by heating nitrate of silver in contact with oil of vitriol in a platinum crucible, is introduced in the form of powder into the liquid—the whole being constantly stirred till the liquid becomes clear, a sign that the hydrochloric is wholly or nearly precipitated. Any hydrochloric acid that may still remain must be separated by cautiously adding more sulphate of silver. If the latter has been added in excess it must be precipitated by carefully dropping in a dilute solution of chloride of barium. The liquid should contain neither hydrochloric acid nor silver, and should therefore give no precipitate, either with solution of silver or with hydrochloric acid. The chloride of silver is separated by filtration and pressure, any portion of liquid which comes through turbid being filtered over again. To remove the sulphuric acid, also, and obtain a pure mixture of water and peroxide of hydrogen, the liquid is placed in a glass mortar surrounded with

ice, and rubbed up with slaked baryta previously pounded and diffused through water; the baryta is added till the sulphuric acid is very nearly saturated. The liquid is then filtered, the water pressed between linen, and the baryta water added in slight excess. This often occasions the precipitation of oxide of iron and oxide of manganese, as well as sulphate of barium; hence the filtration must be rapidly performed. The excess of baryta is removed by cautiously adding dilute sulphuric acid, so that there may be rather a very slight excess of the acid than of the baryta. The whole of the sulphuric acid may likewise be removed by means of carbonate of barium obtained in a finely divided state by precipitation, instead of by slaked baryta and baryta water. Finally, to separate the whole of the water, the vessel containing the liquid is placed in a dish containing oil of vitriol, and the whole is put under the receiver of an air pump; the water then evaporates before the peroxide of hydrogen. The fluid is agitated from time to time. If it should deposit flakes of silica, which give rise to the escape of oxygen gas, it must be decanted off from them by means of a siphon; if it should evolve oxygen—which it will do as soon as it is so far concentrated as to contain about 250 times its volume of oxygen—two or three drops of sulphuric acid must be added to it. The concentration must be stopped after a few days, when the liquid is brought to such a state that when decomposed it would evolve 45 volumes of oxygen gas; for this residue if left longer in vacuo would evaporate as a whole. The peroxide of hydrogen must be kept in long glass tubes closed with stoppers and surrounded with ice; but even under these circumstances it decomposes slowly and evolves oxygen gas."

PHARMACY IN INDIA.—The great pharmaceutical establishments in India are arranged on lines somewhat different to those of European pharmacies generally, says a writer in the *E. and C. Druggist*. The orthodox counter and more or less beggarly array of more or less empty bottles are dispensed with, and elegant cases line the walls, and showcases are ranged on the usually marble floor of the spacious "hall"—it is not a shop—while in the centre is, perhaps, a large marble-topped table, at which either one or two assistants sit at the receipt of custom, which, in the establishments I have indicated, flows in unstintingly during the whole day, from about 10 o'clock in the morning till 5 in the afternoon. Every chemist's shop of whatever pretensions—European or native—has a doctor attached to it. As a rule he is one of the resident staff, and very often is he a partner. The general practice in the large firms is to give advice gratis. Some of them have large consulting practices, and the dispensing of the establishments to which they are attached is correspondingly extensive. In the large houses the dispensary is quite a distinct department from the rest of the establishment, thus avoiding all interruption to the ten, or twenty or thirty compounders during the preparation of medicines.

EXAMINATION QUESTIONS.

This Department is for the publication of questions and answers from our readers; the object being to place before them questions for self-examination and to indicate the directions in which study can be profitably carried on.

We solicit questions to which replies are desired, particularly questions suggested by personal experience and study.

Correct answers to the questions in each series will be published in a subsequent issue of the paper, as announced, together with the names of all persons sending us correct replies.

Write the number of the series at the top of your reply and write on one side of sheet only.

Address—EDITOR PHARMACEUTICAL ERA,
106 Fulton Street, New York.

WILBER SYLVESTER.

The gentleman standing highest in the competition of Series No. 3 of Examination questions was Mr. George Spearman of Social Circle, Georgia, but his portrait appeared very recently in these columns, and it was decided that, in this instance, the portrait of the gentleman who ranked second best should be presented. This individual is Mr. Wilber Sylvester, a resident of Port Huron, Mich. He was born on a farm near Toronto, Ontario, in 1870, being now, therefore, 24 years of age. His education was received in the public schools and afterward at the Collegiate Institute in Toronto. He entered the drug business through serving an apprenticeship with the firm of C. D. Daniels & Co. and later in the employ of W. Lloyd Wood, both of that city. Three years ago, in 1871, he graduated from the Ontario College of Pharmacy, receiving first-class honors, and later, in the same year, he went to Michigan and successfully underwent the examination of the Michigan State Board of Pharmacy. He has since been, and is still, in the employ of E. J. Rodgers at Port Huron, Mich.

ANSWERS TO EXAMINATION QUESTIONS, SERIES 3.

1. In what proportion must two quantities of powdered opium, containing 13.5 and 16 per cent. of morphine respectively, be mixed to produce 3 ounces of opium containing 14 per cent. of morphine?

Answer.—4 av. ozs. or 240 grains, of 13.5 per cent.

1.6 av. ozs. or 700 grains, of 16 per cent. or, giving the results in troy weight:

6.4 troy ozs. or 3072 grains, of 13.5 per cent.

1.6 troy ozs. or 768 grains, of 16 per cent.

This problem may be solved by alligation, and is explained as follows: The gain and loss of the percentage strength of the two quantities of opium used as compared with the mean percentage must balance. Hence, we compare a percentage less than the mean with one greater than it, or 13.5 per cent. with 16 per cent. On every part of 13.5 per cent. opium employed to make the 14 per cent. mixture there is a gain of 0.5 per cent.; on every part of the 16 per cent. opium used in the 14 per cent. mixture there is a loss of 2 per cent. of opium. As the gain and loss on equal parts of each are to each other as 0.5 to 2, we must take parts that are to each other as 0.5 to 2, or (reducing the numbers to integral quantities), as 1 is to 4. Using the proportions obtained to make an 8-ounce mixture, we have found that for every part of 16 per cent. of opium employed there must be taken 4 parts of 13.5 per cent. opium. Then 8 ounces must be 1 + 4 parts or 5 parts. If 8 ounces be 5 parts, then 1 part will be 1.6 ounces, or 1.6 ounces, the amount of 16 per cent. opium to be employed. Four parts will equal 4-5 of 8, or 6.4 ounces, the amount of the 13.5 per cent. opium to be employed. The results are easily reduced to grains, remembering that a troy ounce contains 480 grains and an avoirdupois ounce equals 437.5 grains.

2. A quantity of official sulphuric acid weighs 15 grams. How many cubic centimeters does it measure? A quantity of official nitric acid measures 25 cubic centimeters. How much does it weigh in grams? In grains?

Answer. 15 grams official sulphuric acid (sp. gr. 1.835) measure 8.17 + centimeters.

Twenty-five cubic centimeters official nitric acid (sp. gr. 1.414), weigh 35.35 grams, or 545.5212 grains.

Demonstration: The specific gravity of official sulphuric acid is stated at 1.835, or, in other words, sulphuric acid is 1.835 times heavier than the same volume of distilled water at 15 degrees C.

If 1.835 grams of sulphuric acid measure one cubic centimeter, then 15 grams will measure as many cubic centimeters as 1.835 is contained in 15, or 8.17 + cubic centimeters.

The second part of the problem is the reverse of the first, in that weight instead of volume is sought. Official nitric acid has a sp. gr. of 1.414, or is 1.414 times heavier than an equal volume of water at standard temperature. Then, if 1 cubic centimeter of nitric acid weighs 1.414 grams, 25 cubic centimeters will weigh 25 times as much, or 35.35 grains. Converting this quantity into grains (1 gram equals 15.4324 grains), we have 545.5212, the weight of 25 cubic centimeters of nitric acid in grains.

3. How would you distinguish between a root and an underground stem?

Answer.—A root has characteristic functions. It supports the plant in position and fixes it in the soil. It absorbs from the soil the food necessary for the growth of the plant, while the stem is but the connecting link between the roots and the

leaves. The root is the descending axis of the plant, while the stem is the ascending axis. The root bears no leaves; the province of the stem is to bear leaves. Roots have no growing nodes or internodes, while the stems always possess them. Roots branch very indefinitely, stems branch definitely and regularly. An underground stem is merely a creeping stem or branch growing beneath the surface of the soil, or partially covered by it. An underground or subterranean stem may be distinguished from a root by the fact the former bears scales or scars, in the axils of which buds occur showing the scales to be leaves; whereas roots bear neither leaves nor axillary buds.

The growing point of the root is back of the apex, or, as termed by botanists, abupical; that of the stem is at the apex, or apical. Roots have their tenderest cells covered by a "root cap," which enables them to penetrate the hard soil without risk of injury. Roots always grow from stems. Stems do not grow from roots.

4. Which contains the larger percentage of alcohol—a solution made from equal parts by weight of alcohol and water, or one made from equal parts by measure of alcohol and water?

Answer.—A solution made by mixing equal parts by weight of alcohol and water contains a larger percentage of alcohol than does a solution made from equal parts by volume of alcohol and water.

Demonstration: A liter of alcohol weighs less than a liter of water, hence alcohol has a lower specific gravity than water. Official alcohol contains 91 per cent. by weight, or 94 per cent. by volume of absolute alcohol, and about 9 per cent. by weight of water. Weighing out a convenient quantity, say 500 grams, we have in reality only 455 grams of absolute alcohol and 45 grams of water. To the 500 grams of alcohol thus taken we add 500 grams of water, a solution is obtained weighing 1,000 grams, of which but 455 grams is alcohol. Reducing this amount to per cent. $(455 \div 100) \times 1000$ we have 45.5, or the percentage of absolute alcohol in a solution made from equal quantities by weight of alcohol and water. Taking a convenient quantity of official alcohol by volume, say 500 cubic centimeters, we find it to weigh (500×0.820) specific gravity, 410 grams; of this solution only 91 per cent. $(410 \div .91)$, or 373.10 grams, is absolute alcohol. To the alcohol we add 500 cubic centimeters of water, weighing 500 grams at a standard temperature, which gives us a solution weighing 910 grams, 373.10 grams of which is absolute alcohol. Reducing this quantity to percentage $(373.10 \div 910) \times 100$, we get 41, or the percentage of absolute alcohol in a solution made from equal quantities by volume of alcohol and water.

5. What is the percentage of bromine and how many grains of bromine are there in one ounce of potassium bromide?

Answer.—67.143 per cent. of bromine.

One troy ounce of potassium bromide contains 322.28 grains bromine.

One avoirdupois ounce contains 233.75 grains of bromine.

The first step in the solution of the problem is to find the molecular weight of the potassium bromide. This is done in this and other similar problems by writing down the symbols of the various elements of the compounds concerned in the calculation under each other, placing the atomic weights on their right, not forgetting to multiply the atomic weights by the number of atoms where more than one atom of any element is present. Next add up the numbers to obtain the molecular weight, or weight of a single molecule. Thus

$$\begin{array}{r} \text{K} = 39.10, \\ \text{Br} = 79.76, \\ \hline \text{K Br} = 118.79. \end{array}$$

Therefore, 118.79 parts (ounces, pounds, tons or grains) of K Br yield 79.76 parts of bromine. Then, by simple proportion, we obtain the per cent. or parts in a hundred as follows: 118.79 : 79.76 : 100 : X, or

$$\frac{79.76 \times 100}{118.79} = \frac{7976}{118.79} = 67.143 \text{ per cent.}$$

In a troy ounce there are 480 grains; in an avoirdupois ounce, 437.5 grains. If 67.143 per cent. of potassium bromide be bromine then in a troy ounce there is $(480 \times 67.143 \div 100)$ 322.28 grains of bromine. In an avoirdupois ounce $(437.5 \times 67.143 \div 100)$ 293.75 grains of bromine.

These results may be obtained by reducing the quantities to unity. Going back to the molecular weight of potassium bromide we get the data for this question. If 118.79 parts of potassium bromide yield 79.76 parts of bromine, what will 1 part yield? To obtain this we divide 79.76 by 118.79, or $\frac{79.76}{118.79}$. Then if 1 part yields $\frac{79.76}{118.79}$ what will ounce or 480 grains yield? Evidently $\frac{79.76}{118.79} \times 480$, or $\frac{38284.8}{118.79}$ — means, exactly the same result we obtain by the first method. $(322.28 \div 100) \times 480 = 322.28$ — grains, exactly the same result we obtain by the first method. $(437.5 \text{ grains} \div 100) \times 67.143 = 293.75$ yield $\frac{79.76 \times 437.5}{118.79} = \frac{79.76 \times 437.5}{118.79} = 293.75$ grains.

If we illustrate in the same way the percentage of potassium in potassium bromide, the two results should add up 100. Let us see if they do: $118.79 : 39.10 : 100 : X = 32.854$ per cent. of potassium in potassium bromide; $67.143 - 32.854 = 34.289$, which is close enough to be correct. If 1 part of potassium bromide contain 32.854 per cent. of potassium, 480 grains will contain $(480 \times 32.854 \div 100)$ 157.6992 grains potassium. Let us add this amount to the bromine previously obtained, we have $322.286 + 157.699$, or 479.985 grains, or approximately 1 troy ounce. In an avoirdupois ounce potassium bromide there are 143.932 grains potassium; adding this to the 233.75 grains Br we get 437.682.

6. What is an alum, chemically considered? Write the chemical symbols for two alums not containing aluminum. Name the pharmacopoeial and other varieties of alum.

Answer.—An alum was formerly defined to be a double sulphate of aluminum and one of the alkali bases. The term is now used by chemists, however, in a more comprehensive and general sense, and is made to include all of the double sulphates having a similar chemical structure. All alums crystallize

in cubes and octahedra with 24 molecules of water. There are many alums isomorphous with potassium alum, as K in that alum may be replaced by Na, Li, Cs, Rb, Ag, Tl, or NH₄. The official alum (alumen or potassium alum) has the formula $\text{Al}_2\text{K}_2(\text{SO}_4)_6 \cdot 24\text{H}_2\text{O}$. Chemical symbols of two alums containing no aluminum; $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_6 \cdot 24\text{H}_2\text{O}$ ammonio-ferrous alum, and $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_6 \cdot 24\text{H}_2\text{O}$ chromium alum.

There are two pharmacopoeial alums, potassium alum and ammonio-ferrous alum.

The Pharmacopoeia mentions only one variety of potassium alum, viz., Alumen Exsiccatum, dried or burnt alum.

7. Complete the following chemical equations:

8. What is meant by the following prefixes used in the nomenclature of salts: Mono, bi, bin, tri, quadri, di, bis, ter, tetra, super, hyper, per, aequali, sub, hypo, proto, ortho, meta, pyro, para.

Answer.—The technical names of chemical compounds are generally constructed out of the names of their constituent elements, based upon their arrangement in a molecule, their sources, properties, or other facts or conditions relating to their chemical origin or application.

Bi, bis or bin, ter or tri, quadri, etc., are numeral prefixes of Latin origin, while mono, di, tri, tetra, are of Greek origin. They are used to denote various proportions of constituents, and the position of various compounds in a series; for example:

There is no rule as to the use of the Latin or the Greek forms. Taking the other prefixes in the order outlined in the question, super means above, over, or in excess, thus a super oxide means a higher oxide. Hyper, Greek, over, refers to the converse of hypo (see hypo). Thus hyper-sulphurous acid denotes an acid containing more oxygen than sulphurous acid.

Per, meaning through, to the full extent, denotes the highest compound in a series; for example, a peroxide signifies that oxide which contains the largest quantity of oxygen in a series of oxides; thus, peroxide of hydrogen H_2O_2 , oxide of hydrogen H_2O , or water.

Sesqui, half as much more, or one and a half, denotes a compound where the relation of the elementary atoms is as 2 to 3; for example, sesquioxide of iron (really ferric oxide) has the formula Fe_2O_3 .

Sub, under, or below, implies that the compound contains less of a constituent than is indicated by the rest of the word. Thus, subnitrate of bismuth, $\text{Bi}_2\text{O}_3\text{NO}$; nitrate of bismuth $\text{Bi}_2(\text{NO}_3)_6$.

Hypo, Greek, under, denotes the position of a compound. Thus the acid containing less oxygen than sulphurous acid, $\text{H}_2\text{S}_2\text{O}_3$.

Proto, Greek, denotes the first of a series of compounds; for example, the protoxide of iron, FeO (also called ferrous oxide), contains the smallest quantity of oxygen of any iron and oxygen compound.

Ortho, Greek, denoting right, regular, straight, normal, true or original. Thus

orthophosphoric acid, H_3PO_4 , is the regular, normal (pharmacopœial) acid.

Meta signifies near to, derived from, deviating, altered or different. Thus metaphosphoric acid, $H_3P_3O_6$, differs from orthophosphoric acid, $H_3P_3O_4$, only by the amount of water it contains.

Pyro, produced by fire or high heat. Thus pyrophosphate of sodium is so called in allusion to its origin, *pur*, a Greek word, meaning fire. If ordinary phosphate of sodium $Na_2HPO_4 \cdot 12H_2O$ is heated in a crucible, the water of crystallization is first evolved, dry phosphate of sodium Na_2HPO_4 remaining. Continuing the heat to redness, two molecules of the salt yield one molecule of water and pyrophosphate of sodium, a salt having new properties, is obtained ($2Na_2HPO_4 - H_2O = Na_2P_2O_7$). Other pyrophosphates are produced in a similar way, or by double decomposition and precipitation.

Para signifies equal; example, paracyanogen implies a body chemically equal to cyanogen. Aldehyde has the formula C_2H_4O and paraldehyde, which has different properties, is $(C_2H_4O)_3$, but the difference between them arises from the internal structure.

9. What are the chemical differences between red and yellow oxides of mercury? Give the chemical formula for each.

Answer. Yellow mercuric oxide differs only from the red by being amorphous, and in a much more minute state of division. Both have the chemical formula HgO . In consequence of the different state of aggregation of the yellow oxide, it presents some peculiarities in its chemical relations. It is much more quickly acted upon by reagents than is the red oxide. Oxalic acid, which acts on the red oxide only with the aid of heat, immediately combines with the yellow oxide at ordinary temperature, producing the white mercuric oxalate. It is this reaction upon which is based the pharmacopœial identity test. Yellow oxide of mercury in contact with chlorine, gives up oxygen to that element, forming hypochlorous acid and corrosive sublimate. The red oxide is influenced but little by chlorine at common temperatures.

10. Which contains the more quinine (alkaloid), quinine bisulphate or quinine sulphate? Give the percentage of quinine in each salt and exhibit the figures used in your calculations.

Answer. Quinine sulphate. Quinine sulphate contains 74.31 per cent. Quinine bisulphate contains 59.124 per cent.

Demonstration. Quinine bisulphate, according to the United States Pharmacopœia, has the formula $C_{20}H_{24}N_2O_2 \cdot H_2SO_4 + 7H_2O = 546.88$; that of anhydrous quinine (alkaloid), $C_{20}H_{24}N_2O_2 = 323.34$. As we have found (question 5, this series), chemical symbols represent definite weights, or atomic weights, and they enable us to calculate the percentage of any ingredient in the compounds they represent. These calculations are all based upon the atomic weights from which the molecular weights are derived. The molecular weight of quinine bisulphate is 546.88.

C_{20}	= 239.40
H_{24}	= 24
N_2	= 28.02
O_2	= 31.82
H_2SO_4	= 97.82
$7H_2O$	= 125.72

546.88

The molecular weight of anhydrous quinine, obtained in the same way, is 323.34. On inspection, we see that

$$\frac{323.34}{546.88} : 100.0 :: X : 59.124$$

of the whole quantity is alkaloid quinine. Stated in the form of a proportion, this would be 546.88 : 323.34 :: 100.0 : X = 59.124 per cent. In this proportion, the fourth term must bear the same relation to the third that the second does to the first. From this statement we easily deduce the following rule for the statement of similar problems: As the formula of the substance given is to the formula of the substance required, so is the weight of the substance given, to X, the weight of the substance required. Reduce the formulae to their numerical equivalents, and find the value of X. When three terms of a proportion are given, the fourth may be found by multiplying the two means (second and third terms), and dividing the product by the given extreme. In calculating the per cent. of any ingredient by the above rule, the weight given is understood to be 100-l. e., per cent. is parts per hundred. Let us again try this rule in estimating the percentage of quinine in quinine sulphate. Examining the chemical formula of quinine sulphate, we find it contains two equivalents of quinine in each molecule of the salt. We have already found the molecular weight of alkaloid quinine to be 323.34. Adding up the atomic weights of the elements constituting the molecule of quinine sulphate (as we did in the case of quinine bisulphate), we get the molecular weight, 870.22. Of this two equivalents

$$\frac{323.34 \times 2}{870.22} = \text{alkaloid quinine, or } 74.31\%$$

or $\frac{646.70}{870.22}$. Stated in the form of a proportion we have 870.22 : 646.70 :: 100 : X = 74.31 +

COMMENTS ON ANSWERS TO SERIES NO. 3.

(1) This question was quite generally answered correctly, but very few writers made any attempt to explain the manner in which they obtained the results. Therefore, in addition to the explanation embodied in the answer, it seems wise to present the following rules for ascertaining the quantities of drugs of different percentages or strengths necessary to produce a mixture of any intermediate strength, and also for liquids where no change of volume results from mixing. Write the percentages of the different ingredients in a horizontal row, connect with a line each percentage which is greater than that of the mixture sought with one that is less, and each one that is less with one that is greater, then write the difference between the percentage of the mixture and that of each ingredient under the percentage of the other ingredient with which it is connected by the line. These figures thus placed under each percentage will indicate the proportionate parts of each ingredient to be used.

In applying this rule to liquids, specific gravity comes into use. Using the same formula as above, substituting, however, the specific gravities of the liquids in question for the percentages, we arrive in the same manner at the proportionate parts of the liquids to be mixed. Mixed liquids which contract may be allowed to stand until the contraction ceases, when sufficient liquid is to be added to make up the desired measure.

It is obvious, where there are more than two ingredients, there will be an indefinite number of ratios. Either one of the ingredients of lesser strength than the mixture may vary, and accordingly one or more of the ingredients must vary correspondingly. For application of this rule see full answer to question (1) elsewhere.

(2) This question proved a stumbling block to many because of their seeming incomprehension of the relation between weight and volume. One writer based his calculations upon the weight of water at its maximum density (5 degrees C.), but did not know the specific gravity of the acids at 0 degrees C. He seems unaware of the fact that in these computations the same degree of temperature must be used for all the substances. The pharmacopœia having adopted the standard temperature of 15 degrees C., this should be employed for all specific gravities and volumetric operations. Others used the specific gravities of former editions of the pharmacopœia, while some exercised their own sweet will in employing specific gravities which are not found to be directed by any authorities. It is understood throughout of all these questions that the U. S. P. is the standard in all cases.

(3) Very generally correctly answered. One answer brings out a quite important difference between a root and an underground stem in the statement that the latter has a pith and the former none. To be sure this difference cannot always be depended upon, from the fact that the pith may be very rudimentary. The same writer asserts that roots are destitute or nearly so of chlorophyll.

(4) Nearly all the answers were correct, but very few made any attempt to explain the reasons or the steps of their calculations. It is well to remember that a mixture of alcohol and water contracts in volume, quite appreciably so, and in some calculations this contraction must be taken into consideration.

(5) A few answers demonstrated ignorance of the distinction between atomic and molecular weight. The atomic weight is that of the smallest indivisible portion of an element (referred to hydrogen as unity) which can take part in a chemical change. The molecular weight is the sum of the weights of the atoms which make up the molecule of a compound substance.

(6) Some quite amusing definitions of an alum were received, one writer saying that, chemically considered, alum is an element. Another gave alum root as a variety of alum. The word alum is now a misnomer. It merely represents a type of chemical combination; a double sulphate of a metal having the same quantitative as aluminum and a monad base, generally an alkali. It is well to point out that in the last two revisions of the pharmacopœia (1830 and 1890), potash alum has been the official product in place of the former official ammoniac alum. The French and German pharmacopœias agree with our own in recognizing the potash alum, but the British gives favor to the ammoniac alum.

(7) To our mind this question has proven the most interesting and instructive of the series. It showed conclusively whether the writer knew or did not know how to write an ordinary chem-

ical equation. Those who did not know invariably made a simple double transposition of bases and acid radicals. Our answer to this question gives the correct products in each equation. For the first, many stated the products were $\text{AgNO}_3 + \text{H}$. There is no evolution of hydrogen in this instance. With the second all were able to give the primary product as FeCO_3 , but a number were greatly at sea with reference to the bi-products. Some attempted to get out of the difficulty by writing down NaCl H_2O (acid sodium sulphate). In the third equation those who did not know gave the products as $\text{KI} + \text{H}_2\text{O}$, not appreciating the fact that HIO is incapable of independent existence, and is merely a hypothetical combination used for convenience. A few practiced analysis to a little greater extent and divided the HIO into $\text{H} + \text{O}$.

(9.) Generally correctly answered. The question did not call for the method of manufacture, though a few answers gave a detailed description.

(10.) In this instance, the quinine must be calculated as anhydrous quinine, while the sulphate and bi-sulphate are computed as the official salts containing water of crystallization. Some used the old atomic weights in computing molecular weights. The U. S. P. is the authority. In some instances a little carelessness was displayed, the writer using the molecular weight as given in the 1890 U. S. P., but in calculating the percentage composition of the molecule employed the old atomic weights. Some disregarded in their calculations the water entering into the molecules of the salts, basing their computations on the molecular weights of dry, anhydrous salts.

SUCCESSFUL.

The Following Correctly Answered Eight or More of the Questions in Series No. 2.

Boberg, Otto, Eau Claire, Wis.

SERIES NO. 4.

Replies should reach us not later than June 15, 1894. Correct answers, together with the names of all persons answering correctly eight or more of the questions will be published as soon thereafter as possible.

- (1) How would you distinguish between carbolic acid and creosote?
- (2) What is a symbol, also what does a chemical formula represent?
- (3) How would you prove that the specific gravity of iron is 7.5?
- (4) Define stigma, and mention a drug which the pharmacopoeia directs shall consist wholly of stigmas?
- (5) How would you distinguish between gallic and tannic acids?
- (6) Name the best excipient for a pill mass with each of the following: An essential oil, potassium permanganate, balsam copaiba, silver nitrate, corrosive sublimate.
- (7) How would you dispense the following prescription?
 Ferrous sulphate ʒ grains.
 Potassium carbonate..... ʒʒ grains.
 Mix, and divide into 24 pills.
- (8) How many one-eighth grain doses should there be in one-eighth ounce bottle morphine sulphate as found in the market?
- (9) What is an alcohol chemically considered? Name those covered by your definition that are official in the United States Pharmacopoeia.
- (10) How would you prove the air to be a mixture and not a chemical compound?
- (11) What is the difference between benzol and benzol?

SERIES NO. 5.

Replies should reach us not later than July 15, 1894. Correct answers, together with the names of all persons answering correctly eight or more of the questions, will be published as soon thereafter as possible.

- (1) How many grams of official acetic acid can be obtained from 500 grams of sugar of lead? How many grams of official sulphuric acid is required to decompose this amount of sugar of lead, and what would be the weight of the lead sulphate formed?
- (2) What do you understand by the terms oxidation and reduction as employed in chemistry? Complete the following equations, noting the oxidation or reduction changes, if any:

$$\text{H}_2\text{SO}_4 - \text{HNO}_3 =$$

$$\text{H}_2\text{SO}_4 - \text{KI} =$$

$$\text{Fe}^{+2} - \text{H}_2\text{S} =$$
- (3) How many avoirdupois pounds of U. S. P. sodium carbonate are required to precipitate 100 troy pounds of calcium chloride?
- (4) Given a mixture of copper acetate and silver nitrate in solution. Map out a scheme of qualitative analysis, which shall detect and identify these bases and acids and which shall guard against the presence of other bases and acids. Explain briefly the reason for each step in the analysis.
- (5) Express this prescription in the metric system. Criticise it fully:
 Quinine sulphate, 25 grains.
 Sulphuric acid, 10 drops.
 Potassium chloride, ʒ iij.
 Syrup of orange peel, 2 ounces.
 Water enough to make 4 ounces.

(6) The following equation expresses the chemical change that takes place when ferrous sulphate is oxidized by nitric acid in presence of sulphuric acid to form ferric sulphate (ter sulphate):

Using 150 grams of official ferrous sulphate, how many grams each of official nitric acid and official sulphuric acid will be required for complete oxidation and how many grams of tersulphate would be the theoretical yield? Write out the calculations in full and show the methods employed.

(7) In adjoining drawers in a drug store were kept respectively Glauber's salt and sal soda. In some way the labels have been removed and the druggist wishes to identify the contents of each drawer. How may he best do it?

(8) A druggist has two avoirdupois pounds of red cinchona bark which shows upon assay 25 per cent. of quinine alkaloid. How many grams of official quinine sulphate should he theoretically be able to obtain from this bark? Exhibit the figures used in calculations.

(9) How would you distinguish between antipyrin and acetanilid? Between bismuth subnitrate and calomel?

(10) Convert the quantities in the following formula into their equivalents in apothecary's system.

Tincture of ferric chloride..... 1 cc.
 Dilute acetic acid 1.5 cc.
 Solution of ammonium acetate..... 10 cc.
 Aromatic elixir 5 cc.
 Glycerin 6 cc.
 Water, sufficient to make..... 50 cc.

Point out the chemical reactions, if any, which take place.

TO BRONZE LEATHER, WOOD, ETC., bronze powder may be suspended in a 5 or 8 per cent. tannin solution. The latter does not spread as readily as oil does and the tannin bronze is therefore especially adapted for bronze lettering.

AMMONIATED GLYCERYRHIZIN.—In the making of this scale compound the final solution should not be evaporated by heat—spontaneous evaporation yields the largest, clearest and most readily soluble scales. Pharmacists can profitably make their own supply of this preparation.

VALUATION OF PEPSIN.—At the end of the process for the valuation of pepsin the Pharmacopoeia states in parentheses that "trustworthy results, particularly in comparative trials, will be obtained only if the temperature be strictly maintained between the prescribed limits and if the contents of the flasks be agitated uniformly and in equal intervals of time." This caution ought rather to be in bolder type than in parentheses, for upon it depends largely the success of the operation. An increased temperature beyond the prescribed limits, up to 113 deg. F., and too frequent agitation will usually retard the disappearance of the albumen for from one to two hours, or yield entirely unsatisfactory results. A temperature below 93 deg. F. will also impede the digestion of the albumen to a greater or lesser extent. Digestion carried on in a wide, flat-bottomed flask, so that the layer of the mixture is not deep, at a temperature of 100 deg., without agitation, yields the speediest results.

NEWS COMMENT.

The cut-rate war is reported to have ceased in Haverhill, Mass.

John W. Burke, a long-time New Haven druggist, died of heart disease May 6.

Druggist A. L. Boehmer of Cincinnati has been granted a decree of divorce from his wife.

A wholesale drug house is proposed for Houston, Tex., which will be a go as soon as \$100,000 worth of stock is sold.

W. G. Thomas, a San Francisco druggist, has been found guilty of desertion of his wife, and sentenced to imprisonment.

A Spencer (Ind.) druggist calls special attention in his advertisements to the fact that he has all kinds of poison for sale cheap.

In Scranton, Pa., the druggists are arrested for selling soda water on Sunday, fined \$4, pay the fine, and the operation is repeated weekly.

The Excise Board of Newark, N. J., are attempting to compel pharmacists to pay \$250 a year for a liquor license. They haven't succeeded yet, but possibly may.

The growing of peppermint on a large scale has been instituted near Jackson, Mich., in a section where an attempt to raise the plant has never heretofore been made.

Druggist J. C. French, well known for years in Indianapolis, has assigned for the benefit of his creditors. His liabilities exceed his assets by a very small amount only.

H. H. Merrhoff, a Richmond (Ind.) drug clerk, committed suicide last month with hydrocyanic acid because of his sensitiveness over reports that he had made a mistake in dispensing a certain prescription.

We have often heard of a landlady suing a boarder, but just now a Chicago druggist is suing his landlady. Charge, defective construction of building, whereby entrance of sewer gas caused illness in his family.

A Flushing (N. Y.) druggist had a valuable diamond pin stolen from him while on a street car. He chased the thief for a long distance, finally overtook him, but the jewel had disappeared. He still hopes to get it back.

The proprietor of a variety store in Warren, R. I., is charged by the health authorities with illegal practice of medicine. The prescriptions he writes are said to be peculiarly unique and wonderful in their construction.

A tale comes from Chicago, and we are inclined to think it a fairy tale, to the effect that a poor German of that city has sold his discovery of an invaluable cure for rheumatism to a syndicate for the very neat sum of \$1,000,000. It is worth it if he has found it, but we will wait a little.

Robert C. Dickinson is the name on a new sign over the store at 1120 State street, Erie, Pa., which for a number of years has been known as the Welch pharmacy. The store is furnished with shelf

bottles from the Dawes Manufacturing Co., the fountain is a Lippincott, and the show cases are of a new design manufactured by the Exhibition Show Case Co.

A plan worthy of imitation is that proposed by the Kentucky Pharmaceutical Association to more thoroughly introduce to the favorable attention of the medical profession the products of the National Formulary. Some sixty sample preparations made after the formulas in that work were furnished by different members of the association to a special committee, who will attend the next meeting of the Kentucky Medical Society, distribute the samples and call the attention of the physicians to the superiority of the preparations to the semi-secret and proprietary articles now flooding the market.

The Texas Pharmaceutical Association, at its recent session, unanimously resolved to exert every effort to have a bill passed by the next Legislature for the appointment of a State board of examiners in lieu of the district boards now in existence, said board to be selected from among twenty names suggested to the Governor by the State Pharmaceutical Association, and to meet at different points in the State. The payment of the salary of the registrar of the board is provided for by the payment of annual re-registration fees of \$1 by all druggists. The association mean business. One hundred and fifty dollars was appropriated to defray the expenses of the legislative committee, and Secretary Hoyer donated his salary to that purpose in case the treasury should not be able to stand this call upon it.

ROCHESTER, N. Y.—F. Scherer has opened a new pharmacy in the building recently occupied by the Wyeth Chemical Co., corner Jay and Child streets. W. E. Thrall will be manager.—Geo. Gillespie has moved his store from 410 to 448 Lyell avenue, where he has much larger quarters and an elegant new Tuff's fountain.—Dispensing medicines is sometimes a lucrative business. Some nine years ago Strassenburgh & Steele opened a small store at 254 West avenue. Three years later Mr. Steele sold his interest to Mr. Strassenburgh and opened a new store on East Main street, and later a branch on Clinton street. Mr. Strassenburgh also opened a new store at 413 West avenue, and both stores have done a thriving business. Two years ago he went into the manufacturing business, catering particularly to physicians. He now has two men on the road. The store at 260 West avenue has just been leased for a stock room.

AMERICAN PHARMACEUTICAL ASSOCIATION.

The A. P. A. will begin its forty-second annual meeting in Asheville, N. C., the first Monday in September, and it could not have selected a better place. "Girt round with rugged mountains," the "Queen City" of the "Land of the Sky" is with-

out a peer either in this country or abroad. Asheville is situated in the heart of the Blue Ridge Mountains, in the extreme western section of North Carolina.

It is this section that Christian Reid, Charles Egbert Craddock, Francis Hodgson Burnett and Bill Nye have made famous by their writings. Climatic conditions are most favorable. The nights are cool and the days never uncomfortably warm. Hotel service is unsurpassed; the Battery Park, Swannanoa, Berkeley, Oaks, Oakland Heights and Kenilworth Inn are all first-class hotels, conducted in the most approved style. Electric car lines reach all parts of the city, and a dummy railroad conveys the sightseer to the top of Sunset Mountain, a commanding elevation 1,200 feet above the town.

Asheville is easy of access from all parts of the United States, being twenty hours by rail from New York, sixteen hours from Baltimore, twenty-four hours from Chicago and New Orleans and St. Louis, and fourteen hours from Cincinnati and Jacksonville. It has a population of about 12,000 made up, to a great extent, of people from all over the United States. Many beautiful residences adorn the principal streets and occupy picturesque sites on elevations commanding the city. It is in Asheville that Mr. Geo. Vanderbilt is erecting a country residence, which promises to surpass almost anything in this country. Four million dollars he has already expended, and it is estimated that six millions will be necessary to carry out his present undertakings. From the commanding elevation upon which his residence is in process of construction a grand panorama is spread out. The Black Mountains, where rises the beautiful Swannanoa, are to be seen to the northeast, Mount Mitchell, their highest peak, rising to a height of 6,700 feet above the level of the sea, and being the highest land east of the Rocky Mountains. To the west are Pisgah and the Balsams, to the south the Blue Ridge and to the north Asheville, and beyond the Smoky Mountains and Tennessee.

The local secretary, Capt. Whiteford G. Smith, and the various committees having the meeting in charge have already done much to make it a success. They invite and urge the members of the A. P. A. to come and see for themselves a country that nature has smiled upon, a country that is as beautiful in Winter as in Summer, and one whose people will welcome them with open arms, hoping that when after the association has completed its work its attendants will carry away with them kind and pleasant recollections of Asheville and the "Land of the Sky."

S. F. Luckenbach has removed his stock from Shawano, Wis., to Marinette, Wis., and reports good trade in his new stand.

E. D. Pardee, president of Wisconsin Pharmaceutical Association, Wausau, Wis., is visiting relatives in Ohio.

NEW YORK.

New York, May 26.—If you saw the "want supplement" issued a week ago Wednesday by The Era you probably noticed an article headed "A Drug Clerks' Club." It read as follows:

Do the drug clerks of New York and vicinity want to organize themselves into a club, and provide a clubhouse where they can have the necessary conveniences and comforts that such an organization would offer?

We have been requested by some of the prominent drug clerks of this city to agitate this question, and we would like to receive the expressions of as many drug clerks as are interested in this subject.

If the responses are liberal enough and indicate that the drug clerks of New York city and vicinity want a clubhouse where they can meet one another and enjoy the comforts and conveniences of such an organization, we will agitate the matter further and call a preliminary meeting.

Address all communications to Drug Clerks' Club, care of Pharmaceutical Era.

It seems from the talk of a number of gentlemen in the trade that this question is not so much a matter of "want" as of ability to support such an organization. There can be no doubt that a drug clerks' club in this city is very much desired and is needed, would do much good and could be made a strong institution. Yet there is this one thing necessary: the drug clerks must support such a club themselves, without any outside aid, must show their interest by promptly paying dues and by attending the meetings and visiting the clubrooms. Several attempts have been made to start such a club, but they never amounted to anything. A drug clerk talked for an hour one day to The Era man on this subject, and if the majority of clerks in this city think as he does there never will be a successful drug clerks' club here during this generation. His plan was to get the manufacturers and wholesale drug men to help support the club. It cannot be done that way. The clerks must support the institution themselves from start to finish or it will go under. With that understood at the start and the club organized on such a basis there is no reason to question its success or popularity.

Readers of The Era will remember an item in these columns a few weeks ago which told of the death of a once popular organization of druggists who loved to meet and indulge in bowling. This organization was in existence ten years and many men in the trade were sorry to see it go under. But one by one the members dropped out. Some married, some left the business entirely, others for various reasons found they had no time to devote to the meetings. Before you send in your letter to The Era think the matter over. If such a club is formed, have you money enough to spare to pay your dues? Have you time to devote to its meetings and to visit the rooms? If you cannot answer the first of these questions of course you couldn't join. If you cannot attend meetings or visit the club at least once in two weeks, of what value are you as a member?

Among the replies to the card in The Era the following may be quoted:

In reference to the organization of a drug clerks' club I think the idea is immense.

It would be the filling of a long-felt want.

Put me down as one of your supporters.

F. W.

Regarding your suggestion to form a drug clerks' club I wish to state that I for one would be greatly in favor of such an organization.

J. L.

Just the thing. Hope you will succeed. Willing to do my share.

H. F.

I have given this subject some thought.

By having men of influence take it up the club could be started on a good foundation. There are a great number of druggists in this city who have no home or social connections, consequently when off duty they have no place to spend their time. My idea is to have a clubhouse centrally located. Have a restaurant, reading rooms, bowling and other attractions. Have nominal dues and a small entrance fee, and have a record kept of all applicants for positions—a sort of employment bureau—so that if a drug house wanted a clerk this record could be consulted and the character of any man who sought the position could be at once ascertained. Such a club would soon become a home for the druggists of this city.

H. A.

M. Emil Utard, the representative of Victor Klotz, sole proprietor and manufacturer of Ed. Pinaud's Perfumes, has just returned from a three weeks' sojourn on the Pacific coast, where he was called to investigate charges of fraudulent imitations of Pinaud's goods against a number of retail dealers in that city. Although in nearly every other section of the United States the sale of these goods had been rapidly increasing, there has recently been so little increase on the Pacific coast that an investigation became necessary. Mr. Utard found that the trouble was not a decline in the popularity of the goods, but was due to wholesale substitution. During the three weeks he was on the coast he obtained undisputed evidence of willful substitution by some forty dealers, among whom were five manufacturers, who had been selling in an open way fraudulent imitations of Pinaud's cosmetic preparations, the bulk of sales having been of eau de quinine tonique, brilliantine and cosmetique. In the hands of one manufacturer of these spurious goods 50,000 cosmetique labels were found and seized. These labels were in close imitation of the genuine, though there were some slight differences in typography, which showed only on careful inspection. While much of the imitation preparations was refilled into bottles from which the genuine articles had been used, some of the manufacturers had even gone so far as to have bottles made with the name of E. Pinaud, Paris, molded in the bottle itself. Mr. Utard has directed Chokler, Thomas & Gregory, well-known lawyers of San Francisco, to bring suit against these dealers, and he informs us these suits will be pushed to the full limit of the law. The popularity of the Parfumerie Ed. Pinaud has brought out many imitations, and in New York city itself Mr. Utard has found it necessary

to take legal proceedings against a manufacturer of these imitations. A few cases have been unearthed in several Western cities, and in each of these cases Mr. Utard states that he will proceed against the offender with the utmost vigor. Great care should be, therefore, exercised in the purchase of all Pinaud's perfumes by the dealer, for even if the retailer is not aware of the fact that he is handling the imitations he might be put to very serious inconvenience and expense should he be detected in the sale of any imitation goods. In the case now in the courts of San Francisco, Mr. Utard states that the dealers were fully aware that they were handling spurious goods. Therefore they have to expect no clemency. Mr. Utard says he found business was very good on the coast, and that he had a pleasant journey going and coming.

Henry C. Miner's drug store, at the corner of Bowery and Spring street, is one that reflects credit on the popular theatrical manager. It is as neat and well arranged a store as can be found in a day's journey, and has as its manager a young man who takes as much interest in keeping it up to the highest standard as if it was his own place. He is George W. Hackenberger, a graduate of the Philadelphia College of Pharmacy and a capable and energetic man. He believes in making the store attractive, and succeeds so well that at times the presence of a couple of policemen is necessary in order that there shall be no lives lost in the crush at the doors. This may not sound serious, but as an actual fact there have been occasions when even the policemen were in danger of being squeezed out of shape. As the average New York policeman thinks more of his shape than he does of anything else in the world, this would have been a loss which no amount of damages could have compensated. However, when a Bowery crowd sees a soda mixer throwing the contents of a glass of soda behind his back into another glass without losing a drop it is apt to stop and investigate. The adept who took care of the soda counter last year was a chap who was at the head of his business. The manager makes it a point to have his window display each week of a novel nature. A week or two ago he took out the cashier's desk, which was at the Spring street corner of the store, and in the space thus afforded he backed in a two-horse wagon loaded down with boxes of Miner's Sarsaparilla. The wagon was a regular one, and the number of boxes it held was fifty. This display drew so large a crowd that a policeman's services were necessary in order to keep the sidewalk clear for those who didn't want to step out into the gutter. It is worth while to visit this drug store in the evening to see the electric light supply. The ceiling of the store contains 148 lamps, and altogether there are about two hundred lights. There is an admirable system of conducting business in all the departments, nowhere better shown, of course, than in the prescription office. This store was established in 1894, and was known from that time up to a year or so ago as Church's Pharmacy. It had never had any new blood until Mr. Miner took hold of the place, and since that

time the store has been a great success. It now does four times the prescription business it ever did before. Just as a sample of the amount of business that is done at the soda counter Manager Hackenberger stated that on a warm day there were no less than 1,500 glasses of soda drawn by his men.

Brent Good of the Carter Medicine Company has sent some copies of the London Morning Post to Joseph Toy. These papers contain two very interesting letters. One is from "The Honorable Secretaries of the National Society for Checking the Abuses of Public Advertising," and the other is a reply from Mr. Good, dated at the Hotel Victoria. The "Honorable, etc." (there is a lack of space in this issue), appeals for contributions to push a bill in Parliament doing away with the "abuses." Now, the Carter Medicine Company began about a year ago to put up board advertisements along the lines of certain railroads in England, the same kind as you will see along the Pennsylvania and New York Central roads here. This created a great deal of talk in the tight little Isle, and the society mentioned proceeded to try and stop it. Mr. Good's reply must have pleased our English cousins. He said that as this kind of advertising seemed to meet with objections on the part of some people the company would stop it upon the termination of the contracts already in force. Also, that if the farmers of the country had refused permission, of course the signs never would have been put up. This little touch ought to suggest to our English friends that they are being hit in a tender spot—the pocketbook.

Ed Huth of Rahway, N. J., has sold out to A. A. Kirchstein.

J. A. McDonagh is about to open a store at 506 Tenth avenue.

Dr. L. G. Casella will open a pharmacy at 118 Mott street in a few days.

Brent Good and John W. Cox are expected to return from Europe about the middle of June.

W. C. McPike, of McPike & Fox, Atchison, Kan., has been in town for a few days on business.

The adjective that best describes the bad character of the trade in May is never used in polite literature.

E. A. Sayre, of Seabury & Johnson, attended the meeting of the New Jersey Pharmaceutical Association.

Dr. Hayunza has removed his old stand to the corner of Canal street, No. 502. His former number was 500.

Wenzel & Raubenheimer have removed from Fourth and Willow streets, Hoboken, to 504 First street, in the same city.

Louis Dohme of Sharp & Dohme has been in town for several days on business. He is on his way to Chicago.

There are to be no examinations held by the New York City Board of Pharmacy until the second Monday in September.

It seems to be the general impression among those interested that the law governing the shipment of acids needs modification.

Herbert D. Robbins of the firm of McKesson & Robbins sails for Europe to-day, May 26, to be gone for six weeks on a pleasure trip.

The firms who supply fittings for drug stores are doing quite a business these days, and have not a word to say about hard times.

William R. Warner has returned from Europe in splendid health after a two-months' visit. He came back on the Columbia from Southampton.

O. E. Wherrett, of the Kansas City Proprietary Medicine Depot, is in town. Mr. Wherrett is well-known in the West and has many friends in this city.

T. H. Sherwood and T. W. Norris, of McKesson & Robbins, who went to Europe about the middle of April, are not expected home for some time yet.

George J. Seabury says he feels first class as a result of his trip South. Fishing and riding afforded him much pleasure, and he lost fifteen pounds as well.

Happy is the druggist whose store is near a theatre. Lawrence & Mattson enjoy a large patronage by reason of their store's proximity to the Broadway theatre.

Herman W. Atwood says the contracts are out for the fitting up of the laboratories at the new College of Pharmacy building, and the work will probably be finished by July.

O. H. Beck of 17 Third avenue keeps himself well posted on the drug news of the day. He subscribes to about twice as many journals as the average druggist takes.

Otway Latham, manager of the Tilden Company's New York office, has recently been in Washington. To-day he is at the head office of the company at New Lebanon, N. Y.

The Dix Pharmacy Company's new store at the corner of 56th street and Sixth avenue is a very attractive one, and ought to draw the best patronage in the vicinity.

A. E. Dickinson, general manager of the Cudahy Pharmaceutical Company of South Omaha, Neb., paid a visit to the New York office of the company a little over a week ago.

Frank Smiley, the genial assistant of Charles Weisz at McKesson and Robbins', leaves for Ireland to-day. He will make a tour of that country before he returns in the Fall.

W. E. Dreyfuss and C. O. Hildebrandt, who are in business under the firm name of Dreyfuss & Hildebrandt, are soon to open another store, making three altogether, all in Hoboken.

F. Simon's store, which has been at the corner of Eighth and Bloomfield streets, Hoboken, will hereafter be located at the corner of Ninth and Washington streets, in the Sieburg Building.

The new building to be used for general purposes by the New York Quinine and Chemical Works, at Williamsburg, is now completed. The company has also put in some new machinery lately.

Dodge & Cleot, Jr., Baseball Club walloped the S. G. McCotter nine at Prospect Park last Saturday to the tune of 21 to 5. Harry Robertson is the efficient manager of the D. & O., Jr., Club.

Work is progressing rapidly at the new Hudnut store. The fountain to be put in is a 24-foot tile and mirror top, furnished by Howell & Sangston, New York agents for the Low Art Tile Company.

H. S. Livingston of W. H. Schelleffell & Co., who has been ill for a few weeks, is out of town recuperating. He will have about two weeks of rest, and it is hoped will return feeling better than ever before.

Two of Sharp & Dohme's salesmen are in town—John F. Sprague, the general representative in the South, and John L. Prior, whose special field is North and South Carolina. They will be here for several days.

Henry Kreuder, one of the roll of honor men of the class of '94, C. P. N. Y., has gone to Germany to visit his parents and to take an extended trip. Upon his return in the Fall Mr. Kreuder intends to take up the study of medicine.

S. Wexler, who has a drug store at 231 East Fifth street, is thinking of enlarging his place of business. The store was started only three months ago, so this compulsory increase of floor space speaks well for the young man's business.

Albert Fries of the Springer Torsion Balance Company is taking an extended Western trip for the benefit of his health. He has not been well lately, and when he returns to his desk at 92 Reade street his friends hope he will be in perfect health.

F. K. James, class of '89, C. P. N. Y., and proprietor of the drug store at 700 Eighth avenue, will sail for Germany on May 30. He intends to stay abroad some weeks for the benefit of his health. During his absence Mr. Barry will be in charge of the store.

Serina Plummer of Harlem and Simon Aller of Essex street, druggists, were recently fined \$50 each for keeping a pharmacy without a license. They have sued the city for the amount of their fines, contending that the law under which they were convicted has been repealed.

William Schmidt, formerly of A. Kiefer & Co., Indianapolis, still retains an interest in the drug trade, although for the present he has retired from the business. This was shown by the fact that he was in town last week representing the O. K. & I. Drug Exchange on some matters of importance.

Bendiner & Schlesinger's store at the corner of East 10th street and Third avenue commands an excellent prescription patronage. Mr. Bendiner has been at that corner for about twenty-five years. Among the assistants there are Augustus C. Dohrman, class of '91; Rudolph Brodli, class of '93, and Jessie I. Bailey, class of '95, all C. P. N. Y.

The E. M. Johnson Co.'s office is now in a settled condition, and Dr. Parmelee looks happy again. He has a pleasant position near a window, where he can look across Platt street into the Johnson & Johnson office without turning his chair half around. He says news is dull, but the company is selling its goods briskly, which, by the way, is not news.

Elijah J. Molloy, the United States and Canada agent for the Rosbacher Franz Josef Mineral Water Co., is expected to sail from Queestown for New York in a few days. He has been in Europe nearly two months and has visited the Franz Josef Springs at Buda Pesth and has also "done" the Antwerp Exposition. Mr. Molloy was formerly with McKesson & Robbins.

A meeting of the members of the Society of Chemical Industry who reside in New York city and its vicinity was held at the old College of Pharmacy Building, on 23d street, on the evening of May 13. Besides the signing of the petition to the home society there was a discussion of the matter of forming a local section. The petition will probably be forwarded to London on Wednesday.

Charles Stern, senior partner of Charles Stern & Son, the wine and brandy house at 16 and 18 Vesey street, is here from Los Angeles, Cal. He makes his home there. Mr. Stern says that reports from all over California show that the crop of grapes this year will be very much smaller, with an appreciable effect on prices of wines. He advises druggists of a speculative turn of mind to lay in their stock now.

Dr. John J. Gannon, who was for seven years connected with the pharmacy department of Bellevue Hospital, died at that institution on Tuesday last from diabetes. He was 42 years old and leaves a widow. Dr. Gannon was graduated from the Bellevue Medical School and from the College of Pharmacy. For a time he practiced in Mount Vernon, and then entered the hospital service in this city. His funeral took place on Thursday.

Lucien M. Royce, who has been connected with the wholesale drug trade for the for the last thirty years, has retired, and will hereafter devote his attention to his retail store, at the corner of Seventh street and Seventh avenue, Brooklyn. Dudley T. Larimore, class of '85, C. P. N. Y., who has been associated with Mr. Royce has accepted the position as manager of the Haas Pharmacies at Fourth avenue and 22nd street, and at Fifth avenue and 39th street, this city.

An afternoon newspaper devotes a couple of columns a day to letters from silly boys and girls about love, etc. Almost every day there is a letter from "a drug clerk" or in reply to one from a drug clerk. They are supremely nauseating. The burden of the song is that drug clerks are either too homely, too "stuck up," too closely confined to business or too delicate to be the recipients of "attentions" from the girls of the period. "Well," as Joe Howard would say, "if that is so, let it go at that."

The fountain the Charles E. Hires Company had at the World's Fair will soon be in working order at the office of the company, 116 William street, this city. It is a very large apparatus and will be remembered by those who visited the White City and drank root beer drawn from it. Manager D. Kelsay Whittaker of the New York office says that Mr. Hires was in town a few days ago and reported business as excellent, the company being able to keep up with orders only by hard work.

H. A. Smith's drug store at the corner of East Fourth street and Third avenue is said to be the only all-night pharmacy between City Hall and 34th street. Other "all-night" stores have been started up that way on the east side, but they did not last. Druggist Smith employs a physician in his store, and the residents of that section find this feature very convenient. Mr. Smith is putting in a new

Tufts fountain. It is considerably larger than the apparatus previously used, and will be an ornament to the store.

The news of the death of Willard N. Smith, a valued representative of McKesson & Robbins, was received by the trade with expressions of regret. The firm issued a card in which a fitting tribute to the memory of Mr. Smith was paid in these words: "He was honest, conscientious and earnest, and impressed all with whom he came in contact with these characteristics." Mr. Smith was employed by the firm in 1890, and made friends wherever he went. His territory will be covered by H. W. Bradley.

W. L. Schlager, a progressive druggist of Olyphant, Pa., has started a new store in that town. He procured his fountain from Howell & Sangston, New York agents for the Low Art Tile Company. The same firm has sold fountains to Ewen McIntyre, corner of Sixth avenue and 56th street; Carl F. Wöhllich, 25 Clinton avenue, West Hoboken; W. R. Cobb of Paterson, who has built a new store and fitted it up in first-class style, and to the Live Drug Store, W. B. Montgomery manager, 479 Third avenue. Mr. Sangston attended the meeting of the New Jersey Pharmaceutical Association this week.

F. W. Fink of Lehn & Fink will lead an excursion of friends to Elka Park in the Catskills on Memorial Day. Mr. Fink was one of the promoters of the Elka Park Association, and has been the treasurer of the organization since its inception. This private club comprises gentlemen in the drug and allied trades. About four years ago they bought 2,000 acres of land in the Catskills, and now there are fourteen cottages and a clubhouse there. The roads at Elka Park are nicely laid out, and all improvements necessary for the health and comfort of the residents have been made. The families of the club members spend their Summers there and welcome the advent of the heated term.

Albert Plaut of Lehn & Fink is back from a five days' visit to the Adirondacks, where he and a friend had a jolly good time. At the hotel where they stopped there were no other guests, and so they had the run of the house. Mr. Plaut had great success on his fishing trips, his largest catch being a pickerel or muskallonge weighing ten and a half pounds. This big fellow was brought to this city, and, after being prepared to the Queen's taste, was served to a party of nine drug trade men, all of whom declared that it was a dish fit for a king. Another gentleman who has been enjoying the fine air and good sport afforded up in the Adirondacks is John McKesson, who spent a week there, and found what he went for. It is needless to say that he went for trout, and caught them.

His friends in this city will be pleased to hear that Edward O. Kuntz of Cuero, Tex., has graduated from the St. Louis College of Pharmacy with high honors. He carried off the second prize, a silver medal, for general excellence, his percentage lacking a sixth of being 98. He also took the second prize for superiority in laboratory work. Mr. Kuntz returns South with L. D. Heaton of the firm of

Heaton Bros., Cuero. He has been in their employ for several years and will rejoin them. L. D. Heaton has been in the North for some time in search of health, and goes home feeling perfectly well. Another Cuero resident, who has been in this city attending the Post-Graduate Medical College, is Dr. J. Allen Kyle. He expects to return home soon after the session closes.

At the recent meeting of the Committee of Arrangements of the N. W. D. A., held at the rooms of the drug section of the Board of Trade, it was decided to hold the annual meeting the first week in October. The headquarters will be at Delmonico's. All conveniences for general meeting and committee rooms are provided there, and the banquet will take place there. There are numerous details in connection with the convention that are at present in the hands of a sub-committee. The plan of entertainment is already well outlined, but, being not yet fully completed, the committee does not wish the programme announced just at present. The N. W. D. A. men can depend upon it, however, that all is being done that can be to make this meeting a grand success. Assurances of a very large attendance have already been received.

A. B. Baltzly, one of Harlem's most enterprising druggists, is remodeling his store at the corner of Seventh avenue and 134th street. For two or three weeks the refurnishing has been going on under the direction of F. A. Greenough, of 42nd street, and in another week it is expected that Mr. Baltzly will be able to boast of having one of the prettiest stores on the avenue. Mahogany and plate glass give a rich and tasty appearance, and no expense has been spared to make this popular store attractive. The prescription department has been entirely separated from the main store, and its particular room has been fitted with all the up-to-date conveniences. The sub-station of the post-office, which was established at Mr. Baltzly's store some time ago has proved to be a great convenience for the residents of that section of Harlem.

When the "Abbey" Pharmacy at the corner of Broadway and 35th street is completely fitted up for business, the store will be one of the most attractive of its kind on upper Broadway. Ashton M. Boney, the proprietor, is naturally chafing over the delay in refurnishing the premises, but nevertheless the store already gives one an idea of what it will be when all the fittings are in. A special effort is to be made in the electric lighting way, and Mr. Boney promises that the store will be the most brilliantly lighted in the city. Then there will be a gallery in the store, one corner being occupied by the office of the proprietor. One gets a very poor idea of the amount of room the "Abbey" has by simply looking at the little store on the corner. The well-lighted floor below the street is quite spacious, and there will be located the prescription department and the stock. A dumb waiter will provide a quick return to a call for medicine or stock. It will probably be a month before the store is in settled shape, the furnishings being promised on June 15.

BOSTON.

Boston, May 22.—The Massachusetts General Hospital has always kept an apothecary, but in the out-patients' hospital it has been the practice heretofore to furnish prescriptions to patients, who were directed to buy the medicine at any drug store. Some druggists have been in the habit of sending to the hospital blank prescriptions with the firm address in print at the top. Early in January these druggists were notified that they need not send any more prescription blanks, and it was subsequently learned that the hospital was arranging for an apothecary shop on the same general plan as that at the lying-in infirmary. On March 20 the Massachusetts General Hospital drug store was opened for business in the out-patients' building. The dispensary patients were notified that they might, if they chose, carry their prescriptions to the apothecary, and buying their medicines of him. Eighty-five prescriptions were put up and sold the first day. One West End druggist says that in consequence of the new system at the hospital he has been compelled to discharge one clerk. Another places his monthly loss in trade from the same cause at \$30. Says a third: "We cannot complain of fair competition, but, as I look at it, the hospital has an undue advantage over us when it enters the drug business. Four members of the Board of Trustees are appointed by the Governor of the Commonwealth; the hospital property is not taxed except on some property in Waverly, and in many ways the public has lightened the expenses of the institution. The rent of the hospital drug store is nothing, and yet we are now called upon to compete against it, with our taxes, rents, etc., to be regularly met." Another druggist says: "At first I thought the hospital drug store would not sell medicines to the general public without physicians' prescriptions, but I understand that it has been done in several instances." At the hospital it was learned that it was distinctly not the intention of the hospital authorities to supply any but patients of the out-patient department with medicines, and that if it were found other people were taking advantage of the hospital drug store to procure their medicines sufficient regulations would be put in force to prevent such an abuse. Said one of the managers: "It would be unjust to compete with the druggists by opening our shops to all comers. We open it only to the poor people who are in our-patient department. Our prescriptions are not written in cipher, and they may be filled in any drug store. I have not heard before that any outsiders had tried to get our medicines. If it is so, we will see to it that the practice does not continue."

The class of '94 of the Massachusetts College of Pharmacy dined at the Thorndike the other evening. There were twenty-one present, and Milton H. Plummer presided. Just before the dinner was served the members of the class were photographed. John Ferrin read the class history, which proved very interesting. The class had as guests the following

named former graduates of the college: Edward Varney, Howard Smith and Caleb Harriman. On the evening of May 23 the graduation exercises of the College of Pharmacy will take place in the Y. M. C. A. Hall. The class officers are: President, Milton Holmes Plummer; first vice-president, John Alex McIntosh; second vice-president, Miss Jennie Henretta Sumner; secretary, Adam Thomas McCogan; treasurer, Herbert Calvin Holmes. At the graduation exercises the salutarian will be William Story Briry; the historian, John Ferrin; prophet, D. Albert Roberts; valedictorian, James Chery Fausnaught. Besides those already mentioned the class consists of Lewis Forrester Baker, Alfred William Balch, Arthur Leslie Beal, Albert Henry Benhard, Joseph Bergin, Charles Henry Cahill, Frank Herbert Coffin, John Edward Crowdie, Joseph Ingalls Moulton, Irving Nute, John Allen Osgood, Harry Fowler Smith, Charles Albert Stover, Arthur Herbert Taylor.

An interesting and instructive exhibition of the work of the chemistry classes of the Girls' High and Normal schools was given the other morning in the chemical laboratory of the school building on West Newton street. On one table was a display of the results of experiments in organic chemistry, showing a potato, the starch made from it, specimens of dextrose and dextrose, the distillation of alcohol, the starch and gluten derived from flour, and the making of yeast. Ranged on long tables were more than a hundred loaves of bread, the completed product of all these investigations. On the first table were also the results of tests for dextrose, for starch, and for organic colors, and for tannic acid in tea and coffee, as well as for extracts and essences. On other tables were specimens of crystals, how colors may be bleached, the results of experiments in quantitative analysis, etching on glass, etc. Exhibits of the work of advanced students in quantitative analysis were shown, including the results of resolving milk, the reduction of silver and the taking of photographs.

The following resolutions relative to the death of Mr. Theodore Metcalf were adopted by the trustees of the Massachusetts College of Pharmacy:

"Whereas, in His divine wisdom, our Heavenly Father has called to his eternal rest our beloved friend, Mr. Theodore Metcalf; therefore,

"Resolved, That in the death of Mr. Metcalf the trustees of the Massachusetts College of Pharmacy and the college feel a personal bereavement,

"Resolved, That his kindness and consideration for all with whom he came in contact, his zeal in advancing the cause of honest and scientific pharmacy, a true gentleman of the old school, he won the affection, esteem, respect and love of all with whom he came in contact.

"Resolved, That in the death of Mr. Metcalf the college has lost one who by his wise counsel and personal efforts was always its true friend, particularly so during its early struggle to maintain an organization and to establish itself as a teaching college.

"Resolved, That we extend to his bereaved family our sincere sympathy in this their great affliction, and that a copy of these resolutions be forwarded them and also spread upon the records of the college."

In Somerville the Aldermen had an all night session when the question of licenses came up in the form of a petition requesting the granting of liquor licenses of the sixth class to twenty-four druggists.

The report of the committee on the matter recommended that the petitioners be given leave to withdraw. It was signed by Aldermen Stockbridge and Barron. The third member of the committee, Alderman Gilbert had withheld his signature. He stated that he was not favoring licenses for the benefit of druggists, and that he did not believe in fully licensing any druggist who might apply. "But," said he, "I do believe that licenses should be granted to reputable druggists, but to discriminate between the reputable and disreputable was something found impossible, for mere hearsay is not evidence enough to convict. Therefore I have withheld my signature, as I do not wish to be understood as being entirely against licensing druggists." Mr. Phillips said he hoped the report would not be accepted by the board. He would grant licenses to a sufficient extent to accommodate the people for use in medicine, chemistry and mechanical arts. After six of the members had had their say about seventeen times each, and had said the same thing about a dozen times, a vote on the acceptance of the report was demanded about 2.35 a. m. Aldermen Andrews, Stockbridge, Sparrow and Whitney voted in the affirmative and Aldermen Hamblin, Gilbert, Phillips and Wiley in the negative. Then an order to grant the twenty-four licenses was introduced by Mr. Gilbert, but it was lost by a vote of six to two.

The Waltham License Commissioners have granted druggists' licenses to J. A. Connelly, L. J. Hut-hinson and Arthur M. Field. In Cambridge A. R. Bayley and T. W. Davies have been similarly favored. Police Sergeant Batchelder, the liquor officer, claimed that S. H. Tabot had failed to account for 2,232 half pints of liquor during the year. He had dispensed, 215 gallons and made 1,290 sales. Mr. Tabot was given leave to withdraw. The Lynn Aldermen have refused licenses to the druggists who petitioned for them. A. C. Martin and Charles Freeman, Chelsea druggists, have been given "leave to withdraw" their petitions for liquor licenses. At a meeting of the Malden Aldermen the application of the druggists, twenty-two in all, for sixth-class liquor licenses were refused by a vote of six to one.

Victor J. Orlander, druggist, Worcester, has assigned.

E. Sullivan is about to open a drug store at Concord, N. H.

Dr. Parker has opened a new drug store at Farmington, N. H.

The Freeman-Rice Medicine Company, Gray, Me., manufacturers of patent medicines, is in insolvency.

Irving W. Lyman, a druggist in Revere, has just opened a variety store in that town. Tufts has put in a fountain for him.

Another hearing has taken place in the Insolvency Court in the case of Harry G. Travis, the Hanover street druggist. The case now goes over to June 29.

The Selectmen of Amesbury did not grant any druggists' licenses at their reg-

ular meeting and the opinion prevails that they do not intend to grant any.

R. J. Willis of Somerville has opened a new drug store on Melford street. It contains a fountain furnished by Tufts.

School Committeeman Marshall, who is a chemist, has lately been showing what sound ideas he has by pointing out the need of new textbooks on physiology.

Among the losers by a recent fire at Norway, Maine, was F. P. Stone, druggist, whose stock, valued at \$5,000, was partly destroyed. Insurance was \$4,000.

By a decision of the Supreme Court, just given, Walt & Bond are declared to be entitled to the exclusive right of the word "Blackstone" as a trade-mark for a cigar.

Burglars raided the drug store of ex-Selectman Henry Smith on High street, East Dedham, early one morning. Mr. Smith's loss is \$300. It is believed that the burglary was the work of local thieves.

There was a fire in Natick the other day in a cellar used as a storage room for Danie's & Twitchell's drug store. The fire was confined to the cellar by the sill walls, but the smoke and water damages were considerable.

The Selectmen of Whitman have decided to grant no licenses to druggists for the current year, following the same rule as for the past three years. Although there are four druggists within the limits of the town, only one made application for a license.

The bill providing that licenses of the sixth class shall be granted only to registered pharmacists having a certificate from the Board of Registration in Pharmacy has been passed by the Legislature to be engrossed.

The will of Theodore Metcalf was filed May 11. It contains no public bequests, but leaves all his estate to his widow and children, with a yearly annuity of \$500 to his sister, Julia Metcalf, during her natural life. The instrument was drawn July 1, 1886.

During the conflagration at Roxbury on the afternoon of May 15, J. J. Howe's drug store at Tremont and Burke streets was turned into a temporary hospital, two doctors being in attendance until late in the evening. A score or more firemen were treated there.

A young married woman of this city was taken suddenly ill on an electric car at Charlestown Neck the other morning. She was assisted into Draper's drug store, where she soon gave birth to a child. The young mother was taken to the Boston Lying-in Hospital.

The anti-cigarette craze has reached such a stage that leagues have been formed by schoolboys who have been persuaded to abandon smoking. It will be an interesting thing for druggists to see if the sales decrease at all as soon as the first spasm of virtue has passed.

The Salem druggists are on the lookout for two "spotters" said to have been sent to that city by a Boston society. One of the spies, it is said, is the man who caused so much trouble in Haverhill a short time ago. It is stated that the Haverhill Judge refused to consider his evidence as trustworthy.

W. P. Draper of Springfield, one of the most active apothecaries in the western part of the State, has been doing some clever advertising by means of what appear to be English walnuts. These, when opened, are found to contain a roll of paper calling attention to some of Mr. Draper's special goods, and also a tiny bottle of fine perfume.

One of the most peculiar incidents of the great fire last week, in which about a dozen acres of buildings were leveled by the flames, is the fact that the only thing left intact in the barren expanse is part of the high fence surrounding the baseball grounds upon which is the mammoth advertisement of the X-Zalla Medicine Company that "X-Zalla Cures Burns."

Among the druggists who have lately bought soda apparatus from J. W. Tufts may be mentioned Frank G. Yohn, Holyoke; W. A. Chapin, United States Hotel, Boston; Charles P. de Langie, Market street, Lynn; J. F. Barker, Gloucester, who has bought out the Price drug store; E. P. Leavitt, Plainfield, Vt.; C. H. Guppy Company, Portland, Me.; Davis & Robitilla, Newport, Vt.; Henry Jones, Wolfborough, N. H., and George E. Meacom, Peabody.

There is a floating story that one Worcester druggist played a pretty mean trick on a rival druggist lately. When the Commissioners were making their round of inspection, they had hardly entered the rival's store when in came half a dozen boys with a can. "Please fill this with beer," one of them said, handing the can to the proprietor. That was sufficient. These boys were hired by the neighbor to "rush the growler," so the story goes. The injured one has no license as yet, but he says he will get even.

As usual at this time of the years, crusades have begun in many of the towns against the granting of liquor licenses to druggists. In the Town Hall in Wakefield the other evening there was a gathering of three hundred men and women to remonstrate against the issue of such licenses. The druggists of the town have had liquor licenses for several years, and this year they petitioned for a renewal. The Selectmen received a petition bearing four hundred names protesting against giving them licenses, and it was decided to give a public hearing on the question. Lawyer Towle appeared for the druggists, and argued that their license should be renewed, as there was no evidence that they had violated the law during the past year. Then the Selectmen had a private meeting to consider the matter, and, by a vote of three to two, licenses were refused.

The town of Avon voted in favor of licenses in March, and the same meeting that thus voted also elected a no-license Board of Selectmen, who immediately stated that no license should be granted. Consequently no one applied for licenses with the exception of two pharmacists doing business in the town. After the necessary preliminary advertising, the Selectmen met and decided that they would not grant licenses of the sixth class to the applicants.

Mayor Batchelder of Everett instructed Chief of Police Emmerton to notify all druggists and apothecaries in the city that

on Sundays they would be obliged to confine themselves to the preparation of prescriptions and the sale of medicines alone, and that the sale of cigars, candy, etc., would be strictly forbidden on the Sabbath day. This new order of the reform executive created considerable excitement, but persons affected by the order will not contest it, as they realize the fact that the courts have sustained him in his previous efforts in the line of placing the city at the head of the morality list. It is safe to say that Everett was the quietest city in the Commonwealth when Sunday came. The fact is that on the receipt of the Mayor's notice the apothecaries, nine in all, decided that if they could only be allowed to sell medicines it would not pay them to keep open, and decided to close their stores at 12 o'clock and keep them closed until Monday morning as long as the Mayor insisted on his order. At the store of Charles R. Garrett, corner of Broadway and Railroad street, a large sign decorated the main entrance, bearing a picture of a smoking cigar with the word "No" in the centre, and a mug of foaming soda, with "No" in the centre of the mug, and a notice that the store would not be open on Sunday. It is also understood that the Mayor means business, and will enforce the law, and the Druggists are equally determined not to open Sundays unless they can do business as they always have.

That business is brisk with the Low Art Tile Co. is shown by the fact that they have within the last few weeks supplied soda fountains for use in new drug stores as follows: J. H. Collins & Co., Lowell; J. J. Carroll & Co., Peabody; Whipple & Mansfield, Lafayette street, Salem (their third store); C. H. Martin & Co., Antrim, N. H.; G. R. Hinckley, Brockton (store formerly occupied by M. B. Crowell & Co.); L. M. Briggs, Weston; A. Barth, Providence (his second store); M. F. Sullivan, Fall River; J. E. Quimby, East Milton; M. O'Donnell, Inman square, Cambridge; and B. A. Turner, New Haven, Conn. Besides all this they have sold fountains to the following named druggists who are renovating their stores, some of them in a most elaborate manner: Arthur Tessier, Harrison avenue (who goes into a new building across the street); W. R. Proctor, Sandwich; J. C. Oxley & Co., Reading; F. E. Lovell, Newport, N. H.; A. P. Parkhurst, Gloucester; W. F. Warren, Cambridgeport; M. C. Healey & Co., New Bedford; Charles Coleman, Cambridge street, corner Temple street, Boston; F. C. Wright, Brighton; A. M. Dollittle & Co., Marlborough, N. H.; W. H. H. Andrews, Bridgewater; H. F. Hunt, Tremont street, Boston; Chas. Clark & Son, one of the oldest establishments in Lawrence; L. P. Knox, Mattapan; J. T. Lynch, Woburn; Aaron Pratt, Brookline; John Fessant, Holyoke; E. J. Fitzgibbon, Worcester; A. R. Marwick, Jr., Hartford, Conn.; G. H. Merrill & Co., J. A. Reeves and F. H. Hart, all of Providence; F. H. Lamson, New Britain, Conn.; H. E. Bond, Brattleboro, Vt.; W. H. H. Fisher, Rutland, Vt.; V. A. Grant, Pittsfield, N. H.; Clark & Nutter, Somersworth, N. H.; and M. D. Fisher, Washington street, corner Massachusetts avenue, Boston.

PHILADELPHIA.

Philadelphia, May 22.—There is not much of an improvement in the drug trade in this city, and the little buying is only in small quantities. The floods of the past few days have made havoc with the business, as the orders that generally come in during the first of the week are missing. The storm has flooded a number of towns, and as the railroad travel is cut off, the mail service is affected in like manner. There is, however, a general air of depression in the drug trade, and there is no relief expected until there is something definite done at Washington.

The decision of the Senate to let opium remain as it is, on the free list, has caused the market for that article to be somewhat depressed, especially among those who have laid in a large supply in the hope of there being a duty placed upon it.

Druggist Saurer of Lehigh avenue and Edgemont street, is having himself talked about in the neighborhood in which he lives, it all growing out of a flag-pulling down escapade. Besides the druggist, his former clerk is also a party to the gossip. The trouble began on St. Patrick's Day, when the druggist's clerk is alleged to have pulled down an Irish flag that waved from the residence of a son of Erin in the neighborhood. The boy, however, denied the act, but the owner of the flag and his friends insisted that they would boycott the druggist unless the clerk was discharged. Rather than lose some good customers, the druggist gave the boy his walking papers. Since his discharge the clerk is said to have joined the Junior Order of American Mechanics, and the latter have ordered a boycott on the druggist. Mr. Saurer said that he had heard of this action, but it made no difference to him as he had discharged the boy for purely business reasons, and sentiment of religion did not influence him.

The last of the series of pharmaceutical meetings at the College of Pharmacy was held on Tuesday. Prof. Henry Trimble has been chairman of the committee who have looked after the programmes, and has aroused much enthusiasm by the character of the intellectual menu presented month by month. At the May meeting Prof. E. S. Bastin read an admirable paper on "Economic Botany." Joseph W. England's subject was "Notes on Silver and Its Salts." F. W. Haussman read about "The Presence of Lead in Tartrates," and Prof. Trimble gave valuable information about "Four Oak Barks from India."

Franklin Whittall, 24 years old, son of James Whittall, of the firm of Whittall, Tatum & Co., was drowned in Boston harbor on May 15, while on a pleasure jaunt in a small boat, with three companions, the whole party being students at Harvard University. Young Whittall was taking a post-graduate course, having completed his four years' course in 1893. The first news of the drowning was sent to Boston by a man who found the empty boat drifting around in the upper harbor. Letters in coats which were cast up on an island, gave a clue as to the men who might have been lost, and an investigation led to the discovery of the bodies.

Harry C. Watt, owner of two fine drug stores near the public buildings, is now established in a third enterprise. He distanced all competitors in securing the pharmacy for the New Pennsylvania Railroad Terminal station at Broad and Market streets. The spot is the busiest in the city. The store is fitted up in solid mahogany and plate glass. The soda fountain is made of onyx, and its counters are decorated with unique carvings. Stock bottles are stopped with cut-glass stoppers. Forty-one electric incandescents make a brilliant illumination at night. C. T. Pickett, a graduate of the Philadelphia College of Pharmacy, class of '88, who has been manager of one of Mr. Watt's stores, is in charge of the new place.

William P. Bender, druggist, at the northwest corner of 18th and Morris streets, has brought a suit in the Common Pleas Court in this city to recover \$25,000 from Dr. Lambert H. Edgar for alienating the affections of his wife. Divorce proceedings are to be instituted later. The threats of the injured husband and his intention to bring suit reached the defendant's ears, and he departed. Since then the Sheriff's officers have been searching for him.

The Board of Trustees of the University of Pennsylvania have elected C. C. Harrison as acting provost, to succeed Dr. William Pepper. Mr. Harrison is a graduate of the university, and was the honoree of his class, and was awarded the Henry Reed prize. Recently, with his two brothers, Mr. Harrison endowed the John Harrison Laboratory of Chemistry in honor of their grandfather.

William H. Lacey, who operates the fashionable drug store on the corner of 19th and Green streets, has had a new soda water fountain placed in his store. It was made by Lippincott & Co., and was designed especially for Mr. Lacey. It has twenty-four syrup holders, ten draughts, and is constructed of Italian and Belgian marble, and white onyx. The top is polished mahogany.

John Fergesson, wife, daughter and niece will shortly sail for Europe. Mr. Fergesson is one of the active members of the Philadelphia Drug Exchange.

Blecker & Hadley have opened a drug store at Mill and Wakefield streets, Germantown. They were formerly employed as clerks at Wallace's drug store, Third and South streets.

Brooks & Elfreth will soon open a store at Fourth and Queen streets. Mr. Elfreth now conducts a drug business at Second and South streets.

George H. Somers, for many years a representative of Parke, Davis & Co., died at his residence on North Broad street, on May 6, after a lingering illness.

J. S. Carroll, formerly a salesman with Tufts, of Boston, has recently commenced the manufacture of soda water apparatus at 323 Locust street, this city.

E. H. Fahey, 13th and Race streets, has purchased the drug store at 10th and Green streets, formerly conducted by Mr. Fredericks.

A handsome pharmacy is the one being refitted by F. W. Stedem, at Fairmount avenue and Broad street. This is an old stand and is now undergoing many improvements.

Druggists are complaining about the scarcity of ice and its consequent high price. These conditions cut into profits of soda water, and the practice of chopping or shaving ice into glasses is not as prevalent as was the case last Summer.

The recent floods on the Schuylkill River have invaded a number of plants of manufacturing chemists. Harrison's lead refinery suffered in this way.

Howard B. French is chairman of the Citizens' Committee, which is endeavoring to have Philadelphia's new Mint located on the most favorable site, in spite of the opposition of speculators. He has been tireless in his efforts, and is obliged to make frequent trips to Washington to confer with the Secretary of the Treasury.

John Kirk, Ph. G., formerly associated with E. K. Burns, has just opened a new and handsome drug store at the northwest corner of Seventh street and Concord avenue, Chester, Delaware Co., Pa.

On April 4 a banquet was given to Dr. J. T. M. Cardeza in Beale Hall, Chester, Pa., by the physicians, druggists and other professional men of that place. Dr. Cardeza is well known in Delaware County, as he has been in active practice of medicine for fifty years.

George W. Smythe, the well-known sporting representative of John M. Maris & Co., was in this city a few days ago looking the picture of health. He has lost considerable weight since he first began to train, and he has plenty of bakers in this city on his fight with the cultured gentleman from Boston.

W. O. Lewis, a commercial traveler for a Philadelphia wholesale paint house, attempted suicide at the Westminster Hotel, Scranton, Pa., on April 9. Physicians succeeded in preventing death.

The city authorities are determined to do all that they can to prevent cholera getting a foothold here. A few days ago an order insisting on sanitary inspections by the police was read to the lieutenants of police by Supt. Linden.

Pennsylvania Pharmacy Board held an examination at Harrisburg April 28, 1894. Two hundred and seventy-two candidates appeared for examination, 165 applying for registered pharmacists' certificates, and 107 for qualified assistants' certificates. One hundred and nine of the former and eighty-five of the latter class were successful. The next examination will be held at Williamsport in July. Applicants should apply to the secretary of the board, Charles T. George, Harrisburg, Pa., after the middle of June, for the necessary blank form of application, and the exact time and place of the examination, stating for which certificate they wish to be examined.

Texas Pharmaceutical Association held a three days' session in the Board of Trade Hall, Austin, May 8, 9 and 10. H. L. Carleton, Austin, was elected president for the ensuing year; vice-presidents, G. L. McKinstry, Sherman; George Schmitt, San Antonio, and W. F. Robertson, Gonzales. G. W. Heyer, Houston, and W. F. Shook, Dallas, were re-elected secretary and treasurer, respectively. W. B. Morrison, Waco, was elected trustee to fill the unexpired term of H. L. Carleton, elected president. Galveston was selected for the next place of meeting, with Dr. John Kennedy local secretary.

DETROIT.

DETROIT, May 22.—There are no very startling developments to report among the drug trade of the pharmaceutical centre during the past fortnight.

The announcement in the daily papers that the son of Mr. H. C. Parke, who disappeared so mysteriously from New York on April 18, has been found to have welcome news to everybody here. "Jimmy," as he was called by his schoolmates, has a great many friends in this city, and the sympathy of the community is with Mr. Parke and his family.

There has been considerable talk of late among the retailers in regard to a certain prominent jobbing drug house in this city which has been pushing some of its specialties with the grocery trade. This local jobber has always laid particular stress upon his loyalty to the retail druggists, and the druggists are very much surprised to discover his action in pushing these specialties with the grocery trade. The jobbers here are situated very differently from what they are in many other localities. The territory tributary to Detroit is limited, and our jobbers are compelled to push their trade into every possible channel in order to keep their volume of sales. It is a question, however, if it is possible for jobbers to maintain the support and confidence of the druggists if they go so far as to push 10-cent specialties with the retail grocers that they may offer them in competition with the local druggists.

F. F. Ingram has taken a prominent part in the proceedings of the Associated Manufacturing Pharmacists of this State in reference to the tariff legislation, and as secretary of these meetings has presented several briefs, arguments and petitions to Congress relative to the drug, chemical and other sections affecting the drug interests. His comments are of interest to the drug trade at the present time. Mr. Ingram says that with the exception of the internal revenue feature of the amended tariff bill now being disposed of by the Senate, the bill is quite satisfactory to the trade in general. "Such changes as have been made in the duty on raw material have been reductions, and will be to the advantage of the home manufacturer, while the protective feature of the present law, which places a high tariff on foreign manufactured goods, has been generally maintained. Should the internal revenue tax proposed become a law it would prove very harmful to all—the retailer, wholesaler and manufacturer. It proposes to increase the tax on proof spirits 20 cents per gallon, or about 33 cents on alcohol. The drug trade's desire is to prevent the increase. While believing that alcohol used in the arts and manufactures should not be taxed at all, we cannot hope at this time to secure the great boon of free alcohol. We are endeavoring to prevent an increase of the present tax, and we believe our efforts in this movement should have the hearty indorsement and co-operation of the retail trade, as our interests are identical, neither being in a position to raise the price of his products, although their cost is largely increased."

Mr. Doty, secretary of the Detroit Pharmaceutical Society, states that at

the annual meeting of the society, which occurs June 6, the following officers will be elected: President, vice-president and secretary-treasurer, and that a full attendance is consequently desired. The present active membership of the society is seventy-five. Mr. Doty says: "I believe every pharmacist in this city should become a member of this society. There are questions constantly arising which are of great interest to every pharmacist, and of especial interest to those engaged in the retail trade, and which, being of interest to all, should have the careful consideration of all. Take, for instance, the cut-rate problem, which was for so long under discussion, the present plan was not decided upon without careful consideration, and although it may not be the best plan, it seemed to be the only one. Had every druggist in the city attended the meetings of the society, some better plan might have been suggested, although it does not seem, under the circumstances, any other decision could have been arrived at. The association is very sanguine of the success of their plan, and feel that the cutters will soon begin to think life is a burden, if they are not already of that opinion."

J. L. Schlrmer of Saginaw was in the city a few days since.

The Seneca Mineral Water Co. has opened an office at the corner of Fort and Griswold streets.

Mr. Lance, the genial representative of William R. Warner & Co., was in this city a few days since.

Frederick Stearns has sailed for England, where he will spend the Summer in the Cathedral towns.

S. A. Pfannenschmidt, who for some time traveled in Michigan for a local house, is now back at E. C. Kinsel's.

The drug store of James Hodges at Utica was broken into April 22, the safe blown open, and all the money in it stolen.

Charles Wing, who has for several years been in the employ of the Detroit Pharmaceutical Company, has secured a position with the Trommer Malt Company as a traveling salesman.

C. P. Gowman, who for several years was in business at the corner of 23d and Baker streets, is now managing a store at Tampa, Fla.

H. M. Linabury of Pontiac has recently sold his store to Weed & Co., and has embarked in the manufacture of road wagons. Mr. Weed formerly clerked for Harshaw & Co.

The young lady operator for the Postal Telegraph Company in the store of L. W. Toles at Marquette took cyanide of potash by mistake. Prompt action saved the young lady's life.

H. D. Luce of Lansing was in the city a few days since. He has recently sold his store to A. O. Bauer & Co. Mr. Bauer was for several years in the retail business at Grand Rapids.

John Ward is now conducting the store corner 12th and Myrtle streets formerly owned by J. S. Boyle. Mr. Ward at one time owned a store on Michigan avenue, and was subsequently in business on the east side.

William McGregor was caught in an alley in this city with 100 pounds of opium in his buggy. As the drug was presumably smuggled, the examination is being conducted by United States Commissioner Graves.

The new physicians' supply house, known as the Hupp & Pierce Pharmaceutical Company, which filed articles of association some time since, has opened for business at 74 West Congress street, Detroit, now has three firms competing for the trade.

Ford & Co. of Wyandotte made their first shipment of soda ash on May 13. This firm has been experimenting for the past two years with their raw material, and they now claim that their process is a success, and that their product is the best in the market.

The Pure Food Exposition, which was in progress in the Auditorium for two weeks, is closed. While the exposition itself was a treat to those who attended it and a marvel of neatness and taste in the arrangements of the different displays, the financial results were far from encouraging to the management.

S. F. Frizelle has not yet fully recovered from his long and serious illness. His store is being managed in his absence by Mr. C. C. Curtis. Mr. Curtis is an experienced druggist, having been associated with drug interests, both wholesale and retail for about forty years.

Mr. Courtright, who conducted the Clover Leaf Drug Store at 297 First street, has removed his stock to the new block, 1526 Woodward avenue, corner of the Boulevard. Mr. Courtright appears to have exercised very good judgment in changing his location, as the drug business seems to be somewhat overdone in his old locality.

Arthur J. Wilkinson of D'Avignon's drug store, across the river, in Windsor, Ont., heads the list of students who have passed their final examination at the Ontario College of Pharmacy, Toronto. He becomes the holder of two gold medals, one for passing with the highest percentage in all subjects, and one for passing the best examination in materia medica.

Nelson, Baker & Co. report the completion of the addition to their plant, to be occupied by their pill manufacturing department. They will now be in a better position to serve their trade in this line.

The salvage from Farrand, Williams & Clark's fire was sold at public auction May 24 by the Western Salvage Wrecking Agency of Chicago. The salvage included 1,600 cases of patent medicines, 50 barrels old whiskeys, 300 cases mineral water, 10,000 chamols skins and a large quantity of druggists' sundries.

The homeopaths in State convention at Battle Creek elected the following officers: President, Oscar Le Seure, Detroit; First Vice-President, Prof. D. A. MacLachlan, Ann Arbor; Second Vice-President, N. B. Sherman, Kalamazoo; General Secretary, R. S. Copeland, Bay City; Corresponding Secretary, W. M. Bailey, Detroit; Treasurer, C. S. Mack, Ann Arbor; Neurologist, J. S. Ayres, Kalamazoo. W. M. Bailey was elected a member of the Board of Control, vice Porter, whose term expired. The next meeting of the organization will be held in Detroit.

CHICAGO.

Chicago, May 22.—Inquiries among the wholesale drug houses reveal the fact that out of town trade is very good at present, while that with local druggists is very quiet. Mr. Peters, of the Fuller & Fuller Co., says that their out of town business compares favorably with last year. This cannot be said of the local trade, of course, owing to the abnormal business done last year on account of the World's Fair, but, according to Mr. Peters, their present sales to Chicago show a handsome increase over those for the same period of 1892. Interviews with retail druggists in different sections of the city reveal a rather mixed condition of affairs. Some declare that business is picking up, while others say it is no better than a month ago. The opening of the soda water season and the increased sale of cigars help business out to some extent, but people are not spending the money for luxuries of this kind that they formerly have. The changeable Spring weather has stimulated prescription business to some extent, although this, for some reason, is more noticeable in certain districts than in others.

The next meeting of the State Board of Pharmacy will occur in this city on the 12th of next month. Mr. Schmidt, the prescription pharmacist on the tenth floor of the Schiller Building, is a member of this board. He says the board is strictly enforcing the State Pharmacy law, and is prosecuting a number of cases for violation of the provisions requiring that stores shall at no time be left in charge of those who are not fully registered. Mr. Schmidt moved from the eleventh to the tenth floor of the Schiller Building on May 21.

It is now practically assured that nothing will be done with the Hayes system of numbering patent medicines for the prevention and discovery of cutting, in Chicago. The Retail Druggists' Association, it will be remembered, went into quite an exhaustive investigation of the matter and then put it into the hands of a committee for final consideration and report. The committee made their report about three weeks ago, to the effect that in their opinion it was not feasible, as far at least as Chicago was concerned, since when nothing has been done in the matter, and no meeting of the association has been held. The decision reflects no discredit on Mr. Hayes, as many, including members of the committees which have handled the matter from time to time, were heartily in favor of it, but the main difficulty encountered, that of enlisting the support and co-operation of manufacturers, was found insurmountable. The Chicago Retail Druggists' Association met with a good measure of success in restricting the cutting evil to department stores until the advent of the Economic Drug Company; since when, as one of the officers of the association expressed it, "its efforts have proved abortive." It does not hold regular state meetings at present, and its members are only called together when some matter of common interest like rate cutting seems to imperatively demand co-operative action which promises success. It no longer

has any very direct connection with the Interstate League.

The Senegambian concealed among the bottles and packages on the shelves of the drug departments of the department stores was recently revealed when the manager of one of the big State street establishments said to a local drug man: "We lost heavily in our drug department last year, selling, as we did, many articles below the actual cost to us, and everything else at the lowest margin of profit. Take it all in all, however, I consider that it furnished us with the best and cheapest advertising medium we ever had. We know a good thing when we see it, and shall continue along the same line."

Of the 156 matriculants in the junior class of the Chicago College of Pharmacy, 1893-94, 110 passed the final examinations successfully. The trustees' prize, an entire ticket for the senior course, for the best general average, was awarded to Edmund N. Guthrie of Chicago. The following juniors received honorable mention: R. W. Hull, C. A. Gumare, Edward Ciris, H. Sandkoetter, J. L. Beardsley, O. D. Schreiner, W. A. Zacharski, D. Flavin, D. L. Schrum, Ed Singer, G. A. Hops, Adolph Merritt, George L. Peck, John Nicholek, John H. Graves, R. C. Drew.

The Illinois Drug Clerks' Association, which was recently formed, has taken steps toward incorporating, and papers have been forwarded to Springfield. They will shortly issue a souvenir, which will contain a statement of the objects and aims of the association. Efforts to establish branches outside of Chicago will be taken as soon as the association is fully incorporated. Fred Rudrick, the president, who is with August Jacobson, 479 Ogden avenue, says that one of the principal objects is to establish a downtown office in Chicago, where the names of members, and especially those who are out of employment, will be enrolled, and where druggists can obtain competent clerks at any time. The other officers are: E. P. Bond, first vice-president; W. A. Stuckleck, second vice-president; J. Platt, third vice-president; F. A. Lemke, 95 Canalport avenue, secretary; W. T. Winters, treasurer.

Mrs. A. E. Ebert is now able to be out again.

Chicago suffered severely from the terrific storm of last week.

G. W. Shaw of South Chicago is recovering from recent illness.

C. L. Lindemann's new corner entrance makes his store very attractive.

William Mehl has returned from Baden, Ind., looking strong and hearty.

Benz & Hess of 37th and Wallace streets is succeeded by A. P. Hess.

Mr. Jerman of Lord, Owen & Co. is out of the city for a week on business.

C. D. Stone's, 1061 West Madison street, has recently become an all-night store.

J. G. Sponsel of Morrisson, Plummer & Co. will take a trip East this Summer.

Charles S. Ross, 1302 Madison street, will put in a new fountain, the make not decided.

V. H. Dumbeck, manager of Hurst's three stores, is away on a two weeks' vacation.

Mrs. William Bodemann and friends have returned from their California trip.

Morrison Bros. have opened a new store at the corner of 55th and Wright streets.

Arthur Pierce has just opened a new drug store, corner of 42d and Van Buren streets.

E. B. Macy and family of South Chicago have left on a several months' vacation East.

Ed George of the Davol Rubber Company is again in Chicago working the drug trade.

Axel Turquist, 242 Westworth avenue, will soon have an improved balance on the market.

The Colbert Chemical Co. has opened its new and attractive store in the downtown district.

Mr. Oughten of the Woodlawn Park Pharmacy has returned from his extended wedding trip South.

Oscar F. Isensee of Lord, Owen & Co. is soliciting trade in Englewood and the stock yards district.

E. C. Engels of 47th and Winter streets has purchased a large bill of drugs at a fire sale held in this city.

J. A. Johnston, 1049 West Madison, put in a new fountain, Hart Manufacturing Company make, on May 1.

H. B. Brown, 1249 West Madison street, is refitting his store, putting in new beveled glass show cases, etc.

M. E. Franklin, a prominent druggist of Deadwood, S. D., is in the city with his family, combining business with pleasure.

H. Giddings bought the drug store of Julius Mayr, 1238 West Lake street, about eight weeks ago, and is now conducting it.

Harry T. Lester of Knothe & Co., 45th street, has returned to his post of duty after a long visit at Salem, Ill., his home.

John Plummer, treasurer of Morrisson, Plummer & Co., is being congratulated on the advent of a second son into his family.

A. K. Lowry has opened a drug store in the new large building corner 47th street and Wabash avenue. Fred Taylor will manage it.

Henry Reuter has moved his drug store from the corner of Halsted and Jackson streets to the corner of 40th and Madison streets.

George Clark has bought the drug store of Max Schilling, corner Milwaukee avenue and Paulina street, and took charge last week.

Knothe & Co., proprietors of the Fifty-ninth Avenue Pharmacy, have sold their interest in the business to Emil Thiele, one of the former partners.

Scott & Yungk are soon to start a drug store on the northwest corner of State and 47th streets. This will make the second store at this street junction.

James Thompson, 83 Clark street, has had his store improved by the painting of the front of the building and a thorough inside Spring housecleaning.

A. C. Weckler of the Alhambra Pharmacy is exerting himself in concocting some new soda beverages for the patrons of the theatre during the Summer.

Charles J. Miller, Western manager for Charles Graef & Co. of New York, United States agents for the Apollinaris Company of London, will move shortly from the Owens to the New York Life Building.

C. B. Springer, 154 West Lake street, corner of Albany avenue, has just put in a line of white lead and oils, the Chicago White Lead and Oil Company's goods.

Mr. Rodgers, formerly of Rodger & King, has returned to the city after a long absence West for his health. He is at present employed at Buck & Rayner's.

William Bell, State and 22d streets (the Golden Key Pharmacy), went down to Peru, Ill., last week and returned a benedict, the bride being formerly of Chicago.

C. A. Jerman, general salesman of Lord, Owen & Co., has been spending a month for the benefit of his health at the Indiana Mineral Springs. He will return this week.

W. B. Behrens is conducting the store of E. B. Macy during his absence East. Ed R. Newcombe of Morrissan, Plummer & Co. is not improving as swiftly as his friends would desire.

R. M. Barbour, who sold his drug store, corner Laplin and Van Buren streets, last March to Romanto Wells, is now manager of the J. P. Lee Drug Company's store, at 290 S. Halsted street.

M. A. Curtis, Parkside Pharmacy, has moved his store one block south, on Stony Island avenue, nearer the I. C. R. R. station. This puts him in the same block with the new Harvey's Pharmacy, just started.

A. D. Thorburn of 464 Indiana avenue, the valedictorian of the last graduating class of the Chicago College of Pharmacy, is now conducting the Jackson Park Pharmacy for O. F. Schmidt & Co. of Hyde Park.

The retail drug business of the late Hugo W. C. Martin is now being conducted by his widow, with Paul Wickert, who at one time clerked for Mr. Martin, as manager. The store has been moved from 335 to 376 State street.

John C. Wood now travels through central and eastern Indiana and western Ohio for Morrissan, Plummer & Co. Mr. Wood was formerly with an Indianapolis house, and has a wide acquaintance in the territory covered.

Smallpox still has a strong hold on the city, so much so that the Mayor has issued a proclamation of compulsory vaccination. The Council has appropriated a large sum of money to be used by the Board of Health officers.

F. P. Kennedy has just bought the drug store of C. E. Reiss, 39th and State. Mr. Reiss retires from the retail drug business to devote himself entirely to the manufacture of cherry phosphate, which he has been engaged in for some time.

James A. Davidson, druggists' sundries and stationery, has moved from 231 Randolph street to 215-10 Randolph street, where he occupies the entire second floor. The new quarters are nicely fitted up, and Mr. Davidson says business is brisk with him.

C. W. Greene, who purchased the Harrison Pharmacy, corner State and Harrison streets, about four months ago, is making a success of it. The daily sales have trebled under the new management, and many needed improvements have been made.

J. A. Renner has recently remodeled his drug store, at 1082 West Lake street, putting in a new front, etc. Otto Look, Mr. Renner's competent prescription clerk, is

making a six weeks' visit to Sheboygan, Wis., and B. H. Levy is filling his place while he is gone.

Stone & Co. have removed their drug stock to the southeast corner of 26th and Calumet streets, while Kurth & Dougherty have refitted the store vacated by the former gentlemen, placing in it a complete new stock furnished by Peter Van Schaack & Sons.

G. A. Gaebler of Gaebler & Co. has started on a several months' trip to Europe. He expects to take advantage of various hospital clinics to aid him in the study of medicine, which he has been pursuing in one of our medical colleges. Mr. Link is conducting the pharmacy in his absence.

Curtl & Co. are now located on the northeast corner of 63d street and Cottage Grove avenue. Frank McRae, a former partner of Mr. Curtl, conducts a pharmacy on the opposite side of the street, while Dunning & Co. will start a new store in the building formerly occupied by Curtl & Co.

H. J. M. Schroeter, 425 State street, has opened a prescription pharmacy on the ninth floor of the Champlain Building, corner of State and Madison streets. Mr. Schroeter conducts his new pharmacy personally, and W. W. Hall, a graduate of the Chicago College of Pharmacy, is in charge of the store at 45.

The baseball league of the drug trade is composed this year of men from Lord, Owen & Co., Fuller & Fuller Co., Truax, Green & Co. and Morrissan, Plummer & Co., Peter Van Schaack & Sons and Humiston, Keeling & Co. having withdrawn. The first game of the season occurs Saturday, June 2.

In Englewood, on 63d street, near Wentworth avenue, a large department store is being built, which is to have a complete drug department. There are many druggists now on this street cutting prices on patent medicines who will have this establishment to compete with.

J. Fischer opened a handsome drug store, corner of Kedzie avenue and West Ohio street, May 21. Mr. Fischer has had fourteen years' experience as a drug clerk in Chicago, and is well-known among the west side druggists. He bought his stock from Morrissan, Plummer & Co. The fixtures were made by the Quincy Show Case Co., and the fountain, a small one for a starter, by the Hart Mfg. Co.

Martin V. Creagan, 1435 West Madison street, is undoubtedly the youngest druggist in Chicago, having a store of his own in Chicago. He is but 21 years of age, has been working in drug stores since he was 10, and was registered at 15.

The Colbert Chemical Company has just opened a drug store on the northeast corner of Dearborn and Monroe streets. The company is composed of T. Fred Colbert, Harry Gundling and Joseph Maas. Mr. Colbert conducted a small store at 60 Dearborn street for two years prior to the starting of the new store.

Stone & Co. have removed from 51st street and State street to 49th and State streets, where they are doing business under the name of the Economy Drug Co., H. H. Weissenborn, manager. C. L. Stone is now located at the corner

of 25th and Calumet avenue, while Keath & Dougherty have opened a drug store in Shane & Co's old location at 51st and State streets.

Mr. Blockl of Gale & Blockl has been in California for the last month with his family, and will probably stay for several years, endeavoring to regain his health, which has suffered greatly from a paralytic stroke he received a year or so ago. Walter H. Gale has taken charge of the firm's Palmer House store, which Mr. Blockl formerly personally managed. Mr. Blockl retains his interest in the firm.

R. C. Parks & Co. have just opened a drug store, corner of Van Buren and Whipple streets. The firm is composed of R. C. Parks and Z. Winters, and purchased the stock of Emmons & Co., formerly of 519 Wabash avenue, but who discontinued business May 1. Mr. Parks was with the firm prior to that time, as was also E. R. Bond, who is now running a store somewhere in Southern Illinois. Mr. Parks is putting in a new Lippincott soda fountain.

Extensive improvements are being made to the "Higgins" Pharmacy, 1250 West Madison street. C. W. Sisson, the proprietor, bought Mr. Higgins out about a year ago. Since then he has greatly enlarged the business, and has been greatly cramped for room. He has rented a new store room on California avenue, just back of his present one, and is fitting it up with his surplus stock. The laboratory, greatly enlarged, will be between the two stores.

May 22.—There was a meeting of the Board of Trustees of the Chicago College of Pharmacy this afternoon. Only routine business was transacted. The Committee on School of Pharmacy was expected to report recommending a successor to the late Hugo W. C. Martin as director of the laboratory. No report was made, owing to the chairman of the committee having been engaged in jury duty and unable to give the matter the required attention. The matter will, therefore, not be decided until the next meeting, which takes place on the third Tuesday in June.

Wm. C. Amos, western manager for the Winkelman & Brown Drug Company, has resigned, to accept the position of assistant manager of the railway and agency departments of the Fidelity and Casualty Company of New York, with headquarters in the Rookery building. Mr. Amos came here four years ago and started the western department of the company, whose business he has so well conducted. His resignation takes effect on June 1, but his successor has not yet been appointed.

The Delaware Pharmaceutical Society met in Wilmington May 3.

The following officers were elected for the ensuing year: President, Benton Smith, Wilmington; vice-presidents, J. B. Butler, Newark; C. D. Sypher, Dover, and T. A. Shipley, Seaford; secretary, F. W. Fenn, Wilmington; treasurer, James M. Griffin, Wilmington; Executive Committee, William Poole, D. M. White, and T. B. Cartmell.

The society decided to offer two prizes, one for \$20 and another for \$10, for the best prepared essay read at the next annual meeting of the society, the subject to be selected by the president.

ST. LOUIS.

St. Louis, May 22.—The wholesalers find a fairly good trade, although not what might be anticipated at this season of the year. Prices, however, are without any break, despite the fact that everybody is anxious to get business. Collections are improving, and are a good deal easier than they were last month.

John S. Moffitt, president of the Moffitt-West Drug Company, died on Wednesday night, May 18, at his suburban home, Webster Groves, Mo. He was 33 years old, and had been ill for some months past with a complication of troubles, prominent among which was nervous prostration, that caused his death. April 1, he went to Eureka Springs, Mo., with the hope that he might be benefited, but the disease grew worse, and he returned home a couple of weeks ago. (A sketch of his life is given on another page—Ed.)

There is no uncertain sound in the expression of views of St. Louis manufacturers of drugs and chemicals on the tariff question, or the responsibility for the present depressed condition of our industries. In reply to a circular sent out by Senator Voorhees as to how the Wilson bill would affect manufacturers, the Mallinckrodt Chemical Works, National Ammonia Company, Meyer Brothers' Drug Company and Larkin & Scheffer have made replies. The Meyer Brothers' Drug Company sent in "that they would be compelled to reduce either the price on the product, or discontinue manufacturing if any reduction of duty is made on the goods that they manufacture." The Mallinckrodt Chemical Works sent "they manufactured over 300 different articles, but it would be impossible to say just what difference in cost of production a reduction of one third of the present duty would make. However, such a reduction would result in our discontinuing the manufacture of a large number of articles and becoming importers." Herz & Frerichs send in answer to the circular, "We are manufacturers of such coal-tar preparations, which are not colors and dyes, and which are not used in the manufacture of colors and dyes, but which we used in medicine and the arts. If these preparations go on the free list the extensive plants which have been erected by United States and other manufacturers are valueless." Larkin & Scheffer said: "To reduce the duty one third would probably cause us to stop the manufacture of many articles." The closing paragraph of the letter is a reply and says: "Monkeying with the tariff, silver question and general imbecility of representatives in Congress of both political parties is the cause of the present depression."

The Paint, Oil and Drug Club held its final meeting and banquet of the season at the Mercantile Club on Thursday night, May 12. There was an attendance of fifty-five. O. H. Greene presided as toastmaster. Quite an elaborate repast was partaken of, and there was great flow of oratory. President T. B. Dougherty made the opening address, and he was followed by Mr. Moses L. Wieder, who responded to the toast, "The Manufacturers." Mr. Gustave J. Meyer spoke on "The Jobber," W. E. Scheppe on "The Retailer," and Mr. W. B. Long on "The City Drummer."

Mr. Frank Wyman gave several recitations, and informal speeches were made by Mayor Cyrus P. Walbridge and others. A quartet and mandolin club rendered several pleasing selections during the evening. The special guests of the evening were Messrs. W. E. Scheppe, Frank Wyman and Col. Thomas Richeson.

On Saturday afternoon the Mallinckrodt Chemical Works filed a transcript in the United States Court of Appeals of an appeal from a verdict given against them by Judge Thayer some time ago in favor of the Government. On Feb. 18, 1893 the company imported from Bremen, Germany, 750 ounces of murate of cocaine. The United States Appraiser classed the importation as a chemical compound, and assessed the duty at 25 per centum ad valorem, and charged \$743.25 duty. The company protested, claiming the importation to be a medical preparation in the manufacture of which alcohol is used, and further that the duty should only amount to \$23.45. Judge Thayer decided in favor of the Government, hence the appeal.

J. P. Tierney, proprietor of the Laclede Pharmacy, has been ill for the past week or so.

Theodore Meyer of the Meyer Bros.' Drug Company is in the East on a business trip.

The Dr. J. H. McLean Medicine Company is building a \$5,000 warehouse at Collins and Biddle street.

The retirement of E. A. Leonard from the Antikamnia Chemical Company is announced.

The C. F. Simmons Medicine Company will have an election of a board of directors on May 27.

Oscar Ruge has recently opened a pharmacy at the southeast corner of 19th and Hemet streets.

The wife of A. Phillips, the druggist, was made an M. D. last week in the Missouri Medical College.

Hutchason & Williamson's stock of drugs at Higginsville, Mo., was pretty badly damaged by water on May 12.

D. A. Emerson, representing J. C. Ayer & Co., passed through here last week on his way to the Indian Territory.

The name of W. B. Addington has been mentioned for Congress on the Democratic ticket in the Twelfth Congressional District.

The case of the Merchants' National Bank against the Meyer Bros.' Drug Company has been continued by consent until June 8.

D. E. Hewitt of Winfield, Mo., was in the St. James Hotel on May 16. He took a physician back with him to take charge of his pharmacy.

The Stegner Drug Company was incorporated May 8 with \$5,000 capital stock, by Emil Stegner, Charles Diggs and James A. Maginn, the latter as trustee.

On Wednesday evening, May 18, Miss Edna Waibel, a daughter of L. F. Waibel, the druggist at 763 1/2 South Broadway, was married to Mr. Frank Brimmer.

The Haggins Drug Company of East St. Louis was awarded the contract to furnish prescriptions to the poor of St. Clair County, Ill., at 17 cents each.

W. B. Addington, pharmacist, has purchased considerable stock in the Monitor Publishing Company, which will shortly

begin the publication of a new morning paper.

There is a rumor current that propositions are pending for a consolidation of the interests of two large wholesale establishments, but close inquiries failed to substantiate the story.

On Tuesday, May 15, the drug store and fixtures of Dr. C. C. Roesch at Alton, an Illinois suburb, were seized by a constable under an execution in favor of C. Sotler, owner of the building.

The Richardson Drug Company's laboratory and stock in the Supplies Building, Eighth and Walnut streets, was damaged to the extent of \$3,000 May 18, by smoke and water; fully insured.

Last Wednesday F. Sohn, superintendent of Postoffice Sub-Station No. 11, sold his pharmacy, No. 1400 North Grand street, to his clerk, Emil Stegner, who was also appointed to succeed him as postmaster.

The Arkansas State Association of Pharmacists will meet at Hot Springs on June 5, 6 and 7. They will be entertained exclusively by the local druggists at Hot Springs, and a very elaborate programme has been prepared for the event.

There has been some discussion recently among the druggists on the subject of establishing a retailers' protective association to prevent the sale of drugs by dry goods and other establishments outside of the regular trade, but no organized action has yet been taken, and may not be. The trade claims that State laws would protect them if they were enforced.

Wednesday, May 16, the St. Louis College of Pharmacy appointed the following faculty for the ensuing year: James M. Good, professor of pharmacy; Otto A. Wall, professor of pharmacognosy; Gustavus Hinrichs, professor of chemistry; H. M. Whelpley, professor of microscopy; Francis Hemm, professor of practical pharmacy. The college is in a most flourishing condition, both as regards financial standing and the number of students.

Missouri Pharmaceutical Association holds its sixteenth annual meeting at Excelsior Springs June 12-15. An elaborate programme has been arranged. Prizes are offered for best papers and also for best exhibits. A new feature, introduced for the first time, is the one of "debates," the debaters to be selected by the association, one on each side, and given five minutes for arguments and two and one-half minutes for rebuttal remarks. Here are three of the questions: "Resolved, That clerkship is preferable to proprietorship;" affirmative, a proprietor; negative, a clerk. "Resolved, That women in pharmacy are a failure;" affirmative, Kansas City; negative, St. Louis. "Resolved, That colleges of pharmacy are injurious to the drug trade;" affirmative, a college professor; negative, any one the association may select. Reduced rates have been secured from the railroads.

The Indiana Pharmaceutical Association will hold its two days' annual session at Evansville June 13 and 14. An elaborate programme has been arranged for the entertainment of the members and visitors.

Houston, Texas, Pharmaceutical Association has elected J. L. Cunningham president, Ed A. Schaeffer vice-president, A. G. F. Streit secretary, and R. F. George treasurer for the ensuing year.

PITTSBURGH.

Pittsburgh, Pa., May 22. Pittsburgh's College of Pharmacy seems to be in a better condition this year than ever. Already plans are well under way for extensive improvements next season.

The fact that "Father Mollinger" did not have a secret formula for his remedies was brought to light through a recent squabble in the Allegheny County courts. Father Mollinger, now deceased, was the noted priest-physician of the Church of the Most Holy Name, on Troy Hill, whose supposed miraculous cures on St. Anthony's day attracted pilgrims to that shrine from nearly every State in the Union. Faith and the laying on of hands, with an accompanying penance in many cases, had a great deal to do with the cures. Medicine was prescribed. The prescriptions were of a peculiar sort, written in cipher and filled by Druggist Sawhill. After the death of the learned priest Mr. Sawhill continued to sell remedies made according to the priest's prescriptions, but his field of operations was invaded by Morris Einstein, also an Allegheny druggist. Each used the portrait of Father Mollinger as a trade mark, and thus the suit arose. Mr. Einstein filed a bill to restrain Sawhill from using the formula and trade mark, claiming the right through an assignment of the same from the private secretary of the dead priest. The evidence before a master was to the effect that there was nothing to show that the formulas were secret; that they were simple and known to many physicians. No proof of authority from the priest was shown, and the bill was dismissed. Thus vanishes the popular belief that the prescriptions were out of the ordinary line and of mysterious power.

Three milkmen of Pittsburgh were compelled to submit to a rigid quarantine a few days ago by the chief sanitary inspector of the Bureau of Health. In the home of one scarlet fever and diphtheria broke out. The inspector learned the fact, but feared he would be powerless, as the milkman lived just outside the city line. However, the next morning but one after the cases broke out the milkman was met at the city line by an officer with an order from the Bureau of Health and none of the dangerous milk was admitted. The driver maintained that there could be no danger of infection, but the health officers ran no chances. The other two milkmen lived in adjoining houses where the fever broke out. One of the quarantined men declared the regulation and its enforcement would drive him out of business. The instance led the health inspector to remark that people nowadays submit to more trying conditions than they would many years ago.

Ex-Burgess R. J. Hardy of Carnegie, Pa., who is well known in Pittsburgh, contributed for George A. Kelly & Co.'s Market Review, this city, an article on "Extent to which Pharmacists Should Devote Their Attention to Outside Interests." He has been in politics for years, and ought to know from stern experience what he is talking about. He says:

"Every man of every profession and trade owes a duty to the public as well as toward his family, his business and himself, and, although the pharmacist has not

as much spare time as most business men, it is his duty as a citizen to do all in his power to further the interests of the community in which he lives.

"But as far as the benefit to him as a pharmacist is concerned, it all amounts to simply nothing. It is true that our public-spirited pharmacist will have made many friends, perhaps, and brought himself more conspicuously before the public, but he will also have made enemies, for no man can occupy a public position and discharge his duties faithfully without making enemies, and one enemy will do more harm to his business than several friends will do good, for the enemy will go out of his way rather than come into his store, while the friends will not make any special effort to throw their trade his way if they can be as well served in a more convenient place. As far as being brought before the public is concerned, so judiciously expended in printer's ink will do more good than a year of faithful and useful public services. The public may appreciate his efforts and even feel grateful, but the gratitude will not take the substantial form of increased trade, nor will the fact that he is freely and voluntarily attending to public business be taken as an excuse for his occasional absence from his store. The pharmacist is in a different position from most business men. Every minute of his time may be profitably occupied about his business. When he is not actually engaged in the necessary work of store or laboratory he can be occupied in interesting chemical and pharmaceutical research, and time thus spent will be much more profitable to him in his calling than if devoted to gratuitous public service.

"In conclusion, the writer would recommend every pharmacist who has not been there, and who has the opportunity of serving the public by accepting an honorary office, to do so, if he can afford it, if only for a term of a year or two, for the general knowledge he will gain thereby. But let him recollect that such services, if faithfully discharged, will involve more or less self-sacrifice, and that his business, if not actually injured, will certainly not be benefited."

Letters of inquiry relative to the Sunday observance question have been received from other cities by Pittsburgh druggists. After months of hard work, about four years ago the "Law and Order" Society (so-called) accomplished a "reformation" and closed up ice cream parlors, fruit stands, cigar stores and soda fountains. A thirsty citizen or traveler could not buy even a glass of milk between 12 o'clock Saturday night and midnight Monday morning. Everything, at least downtown, was tight as a drum. The L. and O. fell into disrepute last year, over prosecution of news-dealers, and several of their detectives were arrested and imprisoned on criminal charges. The chief agent of the society was convicted of conspiracy, but sentence was suspended for a time on account of his severe illness. The expenses of such wholesale work on the part of the society amounted to more than the receipts, and in a fit of absent mindedness some members of the L. and O. Society signed notes to pay the deficit. They are now reaping the harvest

of their folly and endeavoring to solicit funds to reimburse themselves. A few fruit stands lately resumed business, but on May 12 Roger O'Mara, Superintendent of Police, ordered them all closed, but said drug stores might sell soda water as a partial recompense for keeping open to fill prescriptions.

Drs. J. Milton Duff, J. I. Thomas and W. H. Duly, a committee of Pittsburgh physicians representing the American Medical Association, has issued a circular showing the route to be followed by the Pittsburgh contingent in going to the national convention in San Francisco, which meets June 5. The local members will leave here May 28 at 6 p. m., going via Chicago, Council Bluffs, Omaha, Denver, Salt Lake City, Ogden and Sacramento.

Druggist Reed has established a new store at 320 Larimer avenue, East End. J. K. Jyle of Sharpburg has sold his pharmacy in that place to a Greensburg druggist.

George W. Kutscher and Miss Lulu B. Fawcett of Bradock were married recently in that place.

The Pittsburgh Paint and Drug Club held its monthly meeting on the evening of May 18 at the Seventh Avenue Hotel. C. F. Nevin of Allegheny is secretary of the club.

Messrs. Hackney & Weber have a new pharmacy in East Liberty, this city, corner of Sheridan street and Penn avenue. Mr. Weber was formerly head clerk for Markell Bros., and Hackney has had a pharmacy on Larimer avenue.

Manager Sichelstein of W. J. Gilmore & Co., wholesale druggists, is one of the most popular business men in Pittsburgh or Allegheny. He is easily approached, and no matter how busy always has time to hunt a news item in his line.

Miss Lillie Mills, an employee of Boggs & Buhl, Allegheny, died on May 16 from the effects of a dose of poison taken by mistake. A physician prescribed some kind of tonic and small doses of a form of strychnine. The bottles, which were alike, stood side by side, and she got the size of the doses reversed.

D. W. Holland, brother to Samuel S. Holland, the Smithfield street druggist, died on board a Fort Wayne train May 11, just as the train was entering Union Station. He went West a year or more ago to get relief from pulmonary trouble. His brothers were at the depot expecting to greet him, but were not even in time to see him breathe his last.

Among the candidates for appointment as postmaster of Allegheny City at the hand of President Cleveland was Perry M. Gleim, a druggist. He was not appointed, but at least has the satisfaction of knowing that he made a good effort. Mr. Gleim's papers were signed by 113 of 123 physicians in Allegheny, 34 of the 42 druggists and by about 300 leading business firms and 80 other residents.

Henry F. Egers, one of the inspectors for the Board of Underwriters, a brother of F. H. Egers, the well-known druggist, had a wonderful escape from death on May 17. He fell five stories in the new fourteen-story Carnegie Building, and yet lives to tell how it happened. He tumbled through an elevator shaft, but his fall at each story was broken by loose boards. One arm and several ribs were broken, but his chances for recovery are good.

CINCINNATI.

Cincinnati, O., May 22.—The injunction suit filed in the Superior Court here before Judge Samuel F. Hunt by the John D. Park & Sons Company, against all the wholesale druggists of this city, and George B. Bower, secretary to M. N. Kline of Philadelphia, is of national importance.

The petition filed by the plaintiff is a rather verbose document, and recites in detail the action of the N. W. D. A. in endeavoring to put them in the "cut-off list" from securing proprietary articles. The suit was filed on April 23, and the defendants have until May 26 to make an answer. Messrs. Paxton, Warrington & Boutet represent the plaintiff, while the interests of the defendants will be looked after by Kittredge, Welby & Simmons. The outcome of the case will be awaited with much interest.

The appended petition which was filed by the attorneys for the plaintiff is of unusual interest to the druggists throughout the United States:

State of Ohio, Hamilton County, Superior Court of Cincinnati.

The John D. Park & Sons Company, a corporation, plaintiff,

vs.
The Standard Drug Company, a corporation; the Stein-Vogler Drug Company, a corporation; Hale, Justis & Co., a firm formed for the purpose of and doing business in the city of Cincinnati, Ohio; Lloyd Bros., a firm formed for the purpose of and doing business in the city of Cincinnati, Ohio, and George B. Bower, defendants.

Petition.

The plaintiff, the John D. Park & Sons Company, says that it is a corporation formed for the purpose of and doing business in the city of Cincinnati, Ohio, and that it is engaged in the wholesale drug business at Nos. 171, 173 and 175 Sycamore street; that in the possession of said business it has an established trade in the sale of proprietary articles commonly called patent medicines, and that it is essential to the carrying on of its said business that plaintiff be allowed in the ordinary way from time to time to purchase said proprietary articles in the wholesale market, from the manufacturers of and dealers in the same.

Plaintiff further states that there has been organized and established, with its headquarters or principal place of business in the city of Philadelphia in the State of Pennsylvania, a combination of a large majority of the various wholesale druggists throughout the United States known as "The National Wholesale Druggists' Association," that said association was formed and is now being conducted for the sole purpose of maintaining excessive rates and charges for certain proprietary articles or medicines throughout said United States; that said association has, by refusing to sell the proprietary articles of the various manufacturers of the United States, and by other means to the plaintiff unknown, caused said manufacturers to fix and maintain an arbitrary and excessive scale of prices, which prices the said association and its members have jointly and severally obligated themselves to maintain as aforesaid; and they have likewise bound themselves to sell such articles to only such persons, firms or corporations as shall obligate themselves in like manner and to sell goods and maintain prices accordingly.

Plaintiff further avers that it is a sale of said association to be observed by all its members, that if any member shall refuse to observe and sell according to said scale of prices, such member shall

be reported to what is known as the "committee on proprietary goods," composed wholly of members of said association, of which one M. N. Kline is chairman, and the defendant George B. Bower is secretary; that under the rules of said association it is the duty of said committee to, and, it in fact does, place such member upon what is known as a "cut-off list"; that hereupon said committee, acting through its chairman and secretary aforesaid, reports all whose names appear in such "cut-off list" to all the wholesale druggists who are members of said association, and also the manufacturers of proprietary articles; that such members and manufacturers are then, through such chairman and secretary, requested to boycott or discontinue selling any of said articles to such member so placed on the "cut-off list;" that such wholesale druggists, whether individuals or corporations, as refuse to become members of said association, are treated by the association precisely as members who refuse to observe the scale of prices aforesaid; that the power and influence of said association are so great that after a member or any wholesale druggist not a member refuses in manner aforesaid, the other members of said association and the manufacturers aforesaid refuse further to sell any of the said articles to said member or druggist placed upon said "cut-off list;" that the power and influence thus exerted to prevent sales are not obtained by the failure of plaintiff or others pursuing its aforesaid course, promptly to pay for all goods ordered, for it and they do in each and every instance pay or offer to pay the prices demanded by wholesale druggists, and only refuse to sell such goods according to the unreasonable and extortionate scale of prices so dictated; but such power and influence are obtained and exerted, first, by certain reductions made in said scale of prices—the exact percentage whereof plaintiff is unable now to state—in favor of such retail buyers as deal only with members of said association, and second, by fear created in the wholesalers that unless they agree to sell according to the scale of prices fixed as aforesaid, they will be unable to obtain the goods necessary to the successful prosecution of their business.

Plaintiff further says that the defendants—the Standard Drug Company, a corporation; the Stein-Vogler Drug Company, a corporation; Hale, Justis & Co., a firm formed for the purpose of and doing business in the city of Cincinnati, Ohio; and Lloyd Bros., a firm formed for the purpose of and doing business in the city of Cincinnati, Ohio—are members of said the National Wholesale Druggists' Association, and are competitors of plaintiff in its business aforesaid.

Plaintiff further says that it has been threatened repeatedly by said association and many of its members, that unless it is aided by the said defendants, that unless it would sign a contract binding itself to adhere to the scale of prices aforesaid, it would be placed upon said cut-off list and prevented from obtaining said articles from any one whatsoever; that plaintiff refused to sign such contract or to adhere to the scale of prices aforesaid, and said defendants have in consequence placed plaintiff in said cut-off list, through the committee to place plaintiff's name on said cut-off list, and to notify all the manufacturers of proprietary articles and wholesale druggists throughout the United States of plaintiff's refusal to sign such contract, or to be bound by the scale of prices fixed as aforesaid.

That, in addition thereto, the defendants hereinbefore named have urged and requested the wholesale druggists in the city of Cincinnati and elsewhere not to sell, and have themselves each refused to and still refuse to sell plaintiff any of the aforesaid proprietary articles; that

the defendant, George B. Bower, has been for some time, and he now is, engaged in ascertaining from whom plaintiff endeavors here and elsewhere to purchase said articles, and is greatly injuring and attempting to destroy its said business by having plaintiff boycotted, in manner hereinbefore shown, in the purchase and sale of said articles; that said defendant, Bower, has been and is now also working through others and on behalf of said association so to boycott plaintiff; and that plaintiff is now unable to give the names of the persons so engaged with said Bower.

That the means resorted to as aforesaid by defendants are only a part of the scheme devised by them and their associates as members of the association aforesaid to boycott and destroy such wholesale dealers as refuse to become parties to such scheme; that the means resorted to for such purpose are conducted with as much secrecy as possible, and plaintiff is unable to state all of them for that reason; that one of their plans is to induce their members to sign an instrument marked "confidential," and addressed thus: "Rebate Proprietors and Wholesale Dealers," to wit:

"I beg to inform you that this firm has just signed an agreement under date of _____, the same as that noted below, and have authorized me to place the same in your hands as being executed with each individual proprietor.

"I trust you will act upon this and honor their orders as hereinbefore.

"Realizing the disadvantage to us, and other wholesale druggists resulting from supplying John D. Park & Son's Company at Cincinnati, Ohio, or their representatives, with contract goods, which they are unable to purchase direct by reason of their open and continued violation of the terms under which such goods are sold, we hereby solemnly pledge ourselves not to make shipments of such goods hereafter to this concern, or to any of their representatives, directly or indirectly, and we also pledge ourselves not to sell rebate goods in quantity exceeding three dozen of any retail at one time whose name has been, or shall in the future be, sent us as supplying John D. Park & Son's Company with rebate goods, and hereby authorize you to discontinue shipments of your goods at any time that you are furnished proof that any such goods have been furnished by us in violation of this writing subsequent to this date;" that the name of the firm inserted as shown above is signed to this instrument and underneath that appears the name of "M. N. Kline, Chairman," that said Kline is chairman of the Committee on Proprietary Goods of the National Wholesale Druggists' Association; and that these instruments, called "contracts," are sent only to each and every member of said association, but also to every manufacturer or proprietor who sells goods according to the scale of prices hereinbefore mentioned.

By reason of the foregoing plaintiff has been, and now is, unable to purchase any of the proprietary articles aforesaid from any of the defendants, or from any of the wholesale druggists throughout the United States, members of said association, on any terms, or at any price, and, unless protected against said acts of defendants by order of this Court, plaintiff's business in said articles will be entirely destroyed, whereby it will suffer irreparable damage.

Wherefore plaintiff prays for an order of injunction restraining defendants and each of them from placing or causing plaintiff's name to be continued or again placed on said cut-off list, from requesting, directing, threatening or intimidating any wholesale druggists on account of selling any kind or quantity of proprietary or patent medicines to plaintiff, and from preventing or in anywise interfer-

ing with such sales to plaintiff, also from requesting or assisting said association or any of its members to carry out said contract to maintain prices, and from interfering with the lawful conduct of plaintiff's private business; that upon final hearing said order of injunction be made perpetual, and that such other and further relief may be granted as equity may require.

PAXTON, WARRINGTON & BOUTET,
Attorneys for Plaintiff.

State of Ohio, Hamilton County, ss.
G. F. Park, being duly sworn, says that he is treasurer of the above named plaintiff, the John D. Park & Sons Company, and that the facts set forth in the foregoing petition are true.

G. F. PARK,
Subscribed and sworn to before me this 25th day of April, 1894.

LOUIS A. BROWNBECK,
Notary Public, Hamilton County, Ohio.

The answers in the injunction suit of John D. Park & Son's Company against Hale, Justis & Co., Lloyd Brothers, the Stein-Vogel Co., the Standard Drug Co. and George B. Bower have been filed in the Superior Court. The case is No. 47,587 of Judge Hunt's docket, and the five answers are worded exactly alike, and are as follows:

"Now comes the defendant — — — and moves the Court to dissolve the temporary restraining order heretofore granted in this cause."

On Saturday, May 26, the motion to dissolve the temporary and restraining order will likely be argued by the opposing counsel, Messrs. Paxton, Warrington and Boutet and Kittredge, Willy and Simmons.

The Era correspondent called on a number of the defendants in reference to the suit.

"We are attending strictly to our own business," said Otto Stein of the Stein-Vogel Drug Company. "Of course, we are deeply interested in the outcome of the suit, however, and the case is now in the hands of our attorneys. I think we will show that there are no grounds for the institution of such a suit."

"I hear considerable talk about the suit," said Mr. Foote, of the firm of Hale, Justis & Co., "The petition of the plaintiff, or bill of particulars, as you may see fit to call it, strikes me as an ambiguous document, which is decidedly hard to make head or tail of. It will doubtless be several months before the matter is definitely settled."

"I have not given the matter a great deal of thought," said N. Ashley Lloyd of the firm of Lloyd Bros. "My opinion is, however, that we, the defendants, will come out on top with banners flying."

"Well, you may state that we will fight the case to the bitter end," said Otto Rauchfuss of the Standard Drug Company. "We have good lawyers and so have the other folks, and it will be certainly a battle royal from a legal standpoint. I think we will come out all right."

"I haven't had time to give the matter much attention," said Secretary Dosey of the Standard Drug Company. "The other officers of the company can probably give you more information."

"All we want is our rights," said Mr. Ambro Park of the firm of John D. Park & Sons Company. "Bower has had a detective after us for two or three months, and we were annoyed very much.

Of course your journal is 'foreninst' us, but we hope to come out all O. K.

"I can't tell you when the case will have a final hearing," said Attorney Simmons. "We have not filed our answer yet, but will do so before the allotted time expires. We will likely make a motion to dissolve the injunction, and the matter will doubtless be argued at length. It will be several months before the case is finally heard."

CLEVELAND.

A Painesville druggist advertises a "re-lined" toilet powder.

The Gold Leaf Baking Powder Company is a new Bryan (O.) corporation. Capital, \$10,000.

The Continental Chemical Co. is a new Cleveland corporation, with a capital stock of \$50,000.

The thirtieth annual session of the Ohio Homeopathic Medical Society was held in Toledo May 8.

C. J. Peit has been in the city for a few days looking for a party to handle his quinine whisky.

Brooklyn Village druggists are in clover. The whole annex to Greater Cleveland has measles, more or less.

Benton, Myers & Co. have a lot of second-hand store fixtures on hand if any one is looking for a bargain.

Cream of tartar adulteration cases seem to be rampant in this State, according to the Food Commissioner's view.

B. F. Goodrich & Co.'s rubber works had a boiler explosion on May 15, and fatalities were narrowly averted.

Druggist Consul Billhardt of Upper Sandusky is due in Moscow, Russia, this week, and will assume his official duties forthwith.

The forty-ninth annual meeting of the Ohio Medical Society began at Zanesville, May 16. Columbus will be the next meeting place.

Mrs. E. W. Reber's drug store at Logan, O., was closed by the Sheriff May 7. B. C. Reber, her husband, had the same difficulties last Winter.

The Virginia Oil Company is a new Cleveland corporation, with a capital stock of \$10,000. H. M. Dillhoefer, liquor department manager of Strong, Cobb & Co., is one of the incorporators.

Are you ready for Sin-sin-ity and the association meeting? Never mind refreshments. Old Mother Queen City has a full board. And she has ordered regular St. Louis Summer weather.

The Kubler & Beck Varnish Co.'s plant at Akron was completely destroyed by fire May 12. Loss about \$15,000, partially insured. The same fire damaged the Akron Chemical Co.'s stock to the extent of about \$1,000.

Patent medicines are moving fast. Cut rates? Nostree! Ladies have always that tired feeling this time of the year. The moment they swallow a bottle of X. Y. Z. all cure they are well. Don't the ads. say so?

A pharmacy located on Main or River street would be a paying investment, providing a man acquainted with the characteristics of the locality undertake the enterprise. A typical Irishman would be a typical success.

The amended Whittlesey cigarette bill has passed the House, and is therefore a law. This removes a lot of drivelling nonsense both enacted and in embryo. The new law levies a tax of \$30 a year on wholesalers and \$15 on retailers.

The Williamson Block was ignited by an explosion under the Euclid avenue pharmacy, May 12, and badly damaged. Manager Dreher says his stock is a complete loss. He estimates his loss at \$8,000. The insurance is \$3,700. The Goodyear Rubber Co., located in the same building, also suffered great loss.

The wholesale houses do a satisfactorily active business, while some manufacturing which use acids and grower drugs in bulk are closed. This line continues rather quiet, but the demands for medicines or medicinal drugs is good for these times. Oils, paints and varnishes are active and in growing demand.

En passant, if you go to Cincinnati, don't be attracted by the cut-rate tribe. Cincinnati and cut rates may work harmoniously together, but it won't do here. It is the imperative duty of Lewia C. Hopp to keep his flock from going astray. Cincinnati is a capital place to roost in, but not in her "abbreviated" pharmaceutical hotbeds.

It's a little awkward Cincinnati did not catch the State Republican Convention along with the Ohio Pharmaceutical meeting. As it is, the former goes to Columbus, and is held on the same dates. As most druggists are Republicans, and enthusiastic ones at that, many will find occasion to absent themselves and take a flyer to the near-by capital.

Gus Weisbrodt, the widely known Midgetown two-store druggist, is hard up. Poor Gussie! The bangalls sped off his last available cash. Thirty thousand plunks is said to be the sum spent by him on the race course. Paul Sorg, the tobacco king and Congressman-elect, has been made his quasi assignee. It is not expected Gus will be "down on his luck" long.

Patent medicine cut rates are not generally observed, not even by members of the C. P. A. They justify their action by the habits of their trade, and deem it far more profitable to sell a reduced amount at full rates than a carload at cut rates or cost. As the cut rate practice did not originate with regular druggists it seems that full rates could be re-established without serious results.

State Dairy and Food Commissioner McNeal announces the following appointees for his second term: Drug inspector, J. Sterrett, Troy. Dairy and food inspectors, W. B. Hastings, South Point; J. F. Knouff, Caldwell; W. E. Hurd, Ravenna; E. W. Dilyart, Swanton, and Willis Sells, Columbus. Chemists, H. A. Webber, Columbus; Albert W. Smith, Cleveland; G. A. Kirchmeyer, Toledo; Charles Fennel, Cincinnati.

What will Meyer & Gleim do with their City Hall Pharmacy when the new City Building is erected in the square? Call it the "old" City Hall or "ex" City Hall Pharmacy? Or move with the whole outfit, providing the architect understood the desires of the times? A modern City Hall

without intramural "dope" connections would be a bore, to be sure. Architects not considering this hint, will have their plans rejected.

The McConnell proposition, one of the several medical examiner bills, has passed the House. All physicians in continuous and and honorable practice for fifteen years be exempt from examination. All physicians must register with the probate judge who represents the State examiner. He is appointed by the Governor for three year and receives a fee of \$1.50 from each physician.

"Oh, what a difference in the morning!" G. L. Hechler drawled this obsolete Boweryism when he woke up smiling from the sleep made so deep by Pabst brews. George had seen the beer ad. In the Moving Day number, and forthwith proceeded to test the attested merits, as he is wont to do with everything but patent medicines. He had to admit, under such favorable circumstances, that Newburg was no longer the capital of Cleveland.

A country druggist running a half column of sundry matter in the only official paper of three counties carries this stereotyped remark at the bottom: "I wear no diamonds!" I often wondered, but never bothered until curiosity got the best of me. Looking up the pedigree of the burgh, I found it had 999 inhabitants. Resources three whiskey distilleries, one brewery, one cheese factory, ten saloons, two general stores. Russian settlement. The no-diamond mystery may be herewith explained.

Henry Stecher, of Stick 'em Fast infamy from a fly's standpoint, knows a thing or two about sundry business. Says he: "Perfumery should be sold at less than the old prices by all druggists, as the increased sales would more than make up for the reduction made; besides, the department stores would soon tire of carrying the wares into our domain. The only way of meeting an antagonist successfully is to meet him on equal terms, and duplicate the attempt if you do not succeed at first."

A country druggist who originated in the Vaterland called me up by the long-distance telephone (Fernsprecher, wohlverstanden), and when I succeeded in deciphering German as she is spoken over an Anglo-obstreperous wire, the following problem confronted me: "Why doesn't the Era come out in Anglo-German style—'alf und halb? The Moving Day number she was a dainty, but if she had been half German, lieber Gott! what for a letter dainty she would have been already." I replied in my perplexity that probably Mr. Haynes was one of "them Shermans" that was ashamed of owning up to their origin. "Dot must be so; how smart you be; he's one of 'em, bet yer life; his name was probably Heine." "Just my suspicion," replied I, "for I heard it said he was a direct descendant of Heinrich Heine, the great Jew poet." "Vat you say? A descendant of Heinrich Heine, the Jew poet? You don't say! Gracious, I didn't know he was one of unsre Leut. Say, but that last number was a dainty. What you think of us Jews now? From Heine he comes, so? I must tell Rebecca, my wife, right away. Gracious, but what a dainty she was!"

KANSAS CITY.

Kansas City, May 22.—The telephone is a dangerous substitute for the written prescription. From St. Joseph, Mo., under date of May 18, comes a story of a physician's careless haste, a drug clerk's good nature and a resultant fatality. Late that night the baby daughter of George D. Berry, purchasing agent of the St. Joseph and Grand Island Railroad, became ill. Dr. T. H. Doyle was called to attend the case. He prepared a prescription containing phenacetine, and to save a walk went to the telephone and called up Knight & Quenton's drug store. Edward Donovan, the clerk, responded, and instead of demanding a written prescription, took the one given him on the 'phone and misunderstood it. He put up atropine instead of the other drug, and one dose killed the delicate babe.

"Killed by a careless drug clerk," was the way the item was headed in the newspapers. There were editorial "roasts" on the druggist, but the physician who used the telephone was at once forgotten.

Charles V. Coelln has sold his drug store in St. Louis.

A. C. Simons has sold his drug store at Ida Grove, Ia.

J. M. McDevit has sold his drug store at Wausa, Neb.

J. P. Williams has sold his drug store at Clinton, Iowa.

Charles P. Ochsner has sold his drug store in St. Louis.

I. W. Waynack has sold his drug store at Eddyville, Neb.

The firm of Wilson & Formy, at Oakdale, Neb., has been dissolved.

H. Moulton has opened a new drug store in Phillipsburg, Kas.

Druggist J. A. Hatcher, at Neodesha, Kas., died recently.

Baschnagel & Co.'s pharmacy at Riverside, Ia., was recently sold.

A. Avitt's drug store at Aulville, Mo., has gone into new hands.

W. J. Marvin has moved his drug store from Achille to Herndon, Kas.

C. H. Finley has sold his stock of drugs at Osborn, Mo., to P. M. Hatch.

H. O. Hall has purchased William Chadwell's drug store at Chandler, Okla.

The drug store of Frank C. Garner, Gainesville, Tex., was recently closed.

Brown Bros. have sold their drug store at Hamilton, Mo., to G. W. Penny.

The partnership of E. O. Howard & Co., at Neola, Ia., has been dissolved.

Brengle & Buel have bought Webster & Co.'s drug store at Texarkana, Tex.

G. Newman has purchased E. L. Barringer's drug store in Cedarvale, Kas.

M. V. Hon and H. C. Boon & Co. have recently sold their drug store at Alvin, Tex.

The drug store of E. R. Russell, Humboldt, Kas., has been sold to Louis Perrenoud.

Charley Balbridge of Escondido, Cal., has accepted a position in A. E. Cutter's drug store at San Jacinto.

Druggist J. G. Wirthman has taken out a permit to erect a \$4,000 brick dwelling house at 1924 Troost avenue.

Dr. Waerhouse's drug store at Deep

Crook, Wash., was destroyed by fire recently. Loss, \$3,500; insurance, \$2,000.

A disastrous fire destroyed every business house in Fontana, Kas., except a drug store and a grocery—the two staples of life.

E. H. Shellack, Allen, Kas., has given a chattel mortgage on his entire stock and on some real estate, for a debt of \$82.50.

Deal Brothers' drug and jewelry store at Carthage, Mo., was destroyed by fire recently. The stock, however, was well insured.

The Supreme Court of the United States has formally fixed the status of lager beer by deciding that it is not spirituous liquor.

W. C. Kennedy of Riverside, Cal., has rented the room adjoining his drug store, and is having the partition taken out to enlarge his place of business.

The store of the Zarey Drug Company, at Ash Grove, Mo., was destroyed by fire a few days ago, together with half a dozen other business houses.

Burglars raided the town of Malta Bend, Mo., and among others, broke into the store of the Brown Drug Company, where they drilled the safe and stole about \$40 in money.

The three druggists of Downs, Kas., have caused the arrest of several persons for blackmilling them out of \$1,500 by threatening them with punishment for the sale of liquor.

The Mayor nominated Frank A. Faxon of the wholesale firm of Woodward, Faxon & Co. to be a member of the Board of Public Works. Mr. Faxon declined the office, as he could not spare it the time.

The Charles V. Coelln Drug Company of St. Louis has been incorporated, with a paid up capital of \$6,000. Charles V. Coelln owns thirty-seven shares, H. H. Stuessel twenty, and John Hirth three.

The Jaccard Watch and Jewelry Company has completed a lot of label buttons for the Missouri State Pharmaceutical Association. They have scales in gold, the mortar in white enamel and the background in blue, and bear the name of the organization.

The Midway Medicine Company of Kansas City, Kan., was organized a few days ago, with a capital stock of \$100,000, and was chartered by the Secretary of State of Kansas. The directors are Thomas S. Brown of Kansas City, Mo.; N. Cree of Kansas City, Kan., and Thomas B. Peacock of Topeka, Kan.

Henry P. Scott and Charles D. Ray, doing business in druggists' specialties under the name of the Gem Company at 515 Main street, have been indicted by the Federal Grand Jury for using the mails to advertise unlawful articles for women. Scott has been tried and convicted, and he will be sentenced in a few days.

The following travelling salesmen were recently in Kansas City: Henri Hospital, for F. Patrel & Co., New York; G. B. Swindell, Swindell Bros., Baltimore; Eli J. August, Elsner & Mendelson Company, New York; J. S. Henry, Crown Perfumery Company, Chicago office; H. C. Lockwood, Columbia Chemical Company, Washington, and Dr. Hammond's Preparations.

PHARMACEUTICAL ASSOCIATIONS.

Pennsylvania Pharmaceutical Association meets in seventeenth annual session at Neversink Mountain Hotel, near Reading, June 12, 13 and 14. Complete arrangements have been made for musical and other entertainments, and for an afternoon excursion over the Mountain Railroad.

New York State Pharmaceutical Association, through its local secretary, Chas. F. Fish, announces that reduced hotel rates will be accorded all members or non-members who may be in attendance at its meetings in Saratoga Springs, June 26-28. Ample space for exhibition purposes will be provided.

The Laporte County, Ind., Druggists' Association, at its recent meeting, held in Laporte, elected the following officers for the ensuing year: W. F. Woodson, president; Thomas A. Boyd, vice-president; George S. Dennison, treasurer, and T. M. Godfrey, Michigan City, secretary. The next meeting of the association will be held in Michigan City in August.

Tennessee Druggists' Association held its ninth annual convention in the Chamber of Commerce, Chattanooga, May 16. The address of welcome was made by Hon. R. M. Barton, of Chattanooga. Officers for the ensuing year are as follows: President, J. F. Volst, of Chattanooga; vice-presidents, C. M. Greve, Chattanooga; James Thomas, Nashville; secretary, Will Vickers, Murfreesboro; treasurer, Louis Lawrenson, Memphis. A resolution favoring an amendment to the pharmacy law by which it should be made effective throughout the entire State was adopted. The delegates were tendered an excursion on the Tennessee River.

Milwaukee (Wis.) Drug Clerks' Association has a membership of seventy-six, no debts, elegantly furnished quarters at 323 Chestnut street, and a brilliant outlook for the future. Apparatus, books, specimens of drugs, etc., have been contributed by prominent manufacturers. Officers of the society are: H. F. Weber, president; J. A. Block and M. E. Traylor, vice-presidents; Ed. Meinecke, Jr., corresponding secretary; A. J. Luebke, recording secretary; C. Rogers, treasurer; C. S. Wasweyler and Casper Hennel, censors, and M. Kleinhans, librarian. The association meets bi-weekly, and expects to soon become incorporated.

Illinois Pharmaceutical Association will hold its fifteenth annual meeting at Peoria, Aug. 14, 15 and 16, 1894, in the Y. M. C. A. auditorium. A reception, musical programme and banquet, Wednesday evening, Aug. 16, at Turner Hall, will be tendered to the visiting druggists by the Peoria Retail Druggists' Association. Reduced rates on all railroads belonging to the Western Passenger and Central Traffic Association (for Illinois points only) have been secured on the certificate plan—pay full fare going and return at one-third fare. Peoria is known all over the West as the "Convention City," and the druggists of Illinois can find no better time to enjoy a little vacation from business.

The Alabama Pharmaceutical Association, at its annual convention in Anniston, May 8 and 9, elected the following officers,

after deciding to meet next year in Montgomery: E. P. Galt, Selma, president; J. L. Wikie, Anniston, vice-president; P. C. Candidus, Mobile, secretary; E. E. Elam, Anniston, treasurer. The local druggists tendered the visitors an outing and a banquet at Oxford Lake, for which resolutions of thanks were unanimously tendered by the association.

Georgia Pharmaceutical Association met in Americus May 8. There was a large attendance. An address of welcome by the Mayor, responded to by Mr. Goodwyn of Macon, was a feature of the opening session. Interesting papers were read by many members, among the number being Dr. Durban of Augusta. The officers elected for the next year were: President, John Turner, Columbus; first vice-president, Dr. Curry, Rome; second vice-president, Dr. Dickinson, Thomasville; third vice-president, Dr. Fort, Americus. Dr. S. C. Durban of Augusta was elected president of the State Board of Pharmacy. A banquet at the Windsor Hotel wound up the exercises. "It was the best meeting the association ever held," was the verdict of all present.

California Pharmaceutical Society held its semi-annual meeting in the rooms of the California College of Pharmacy May 8 and 9. There was a good attendance, keen interest being taken in the proceedings, the various phases of the drug business being ably discussed by members present. Papers were read: "Iodine Ointment," S. A. McDonnell; "Dead Stock," W. M. Seaby; "Monograph on the Constituents of Ergot of Rye," W. T. Wenzell; "Bismuth Sub-gallate," Frank T. Green; "Solution Chloride of Lime," H. E. Besthorn; "The Druggists' Bogle Man," Charles M. Troppman. May 9 was "Pharmacy Day" at the Midwinter Fair, and the members of the society spent the afternoon in visiting the various attractions, terminating with a banquet in the roof garden of the Model Cafe, in the Fair Grounds. The toasts and their responses made the latter occasion one to be long remembered by the visitors.

The Mississippi Pharmaceutical Association convened in annual session at Jackson May 7 and 8.

President West called the association to order, and Secretary Carson Lemly called the roll, which showed a full attendance. After routine business the following officers were elected for the ensuing year: N. C. Mosby, Jackson, president; John Hough, Magnolia, and R. R. Ledbetter, Jackson, vice-presidents, C. H. Herbert, Jackson, secretary; W. G. Barnes, Brandon, treasurer. The following committees were appointed: Executive: J. C. Schotell, Dr. Ellis, Utica; H. C. Price, On Papers and Queries; J. P. Mayo, Carson Lemly, S. M. Dampier, George L. Moore, W. T. Matthews. On Trade Interests: P. B. King, John Hughes, O. Lillybeck, E. Lemly, C. H. Cotton. On Legislation: J. W. Eckford, A. G. Cassell, B. Lemly, H. T. West, Wade Harvey, G. S. Beall. On Revision: L. A. Rafter, J. B. Small, C. H. Herbert. Delegates to the American Pharmaceutical Association: J. W. Eckford, J. C. Means, H. T. West. A number of interesting papers were read by J. C. Schotell and others.

The Kentucky Pharmaceutical Association held its 17th annual meeting at Paris, May 16-17. Seventy-five members were in attendance, and the entire proceedings were characterized by harmonious and enthusiastic discussions.

The following papers were read and freely discussed: "Local Organization," Addison Dimmitt; "New Proprietary Remedies," Dr. J. P. Barnum; "Facts from the Prescription File," C. S. Porter; "Glycerine of Commerce," G. Holzhauer; "Artificial Carlsbad Salts," Chas. L. Albus; "Microscope in Pharmacy," Louis Rominger; "Creosote of Commerce," G. Holzhauer; "Syrup of Hydrochloric Acid," O. C. Dily; "Emulsion of Cod Liver Oil," G. Holzhauer; "How the Physician Can Be Influenced to Prescribe the Preparations of the National Formulary," G. Holzhauer. The association prizes were awarded to C. S. Porter and to Louis Rominger for the best papers on commercial and scientific topics, respectively. The following officers were elected for the ensuing year: President, C. J. Clarke, Paris; Treasurer, Charles G. Morris, Louisville; Secretary, J. W. Gayle, Frankfort; Chairman Executive Committee, E.

BOARDS OF PHARMACY.

Wisconsin Board of Pharmacy holds meetings for examination the ensuing year as follows: June 13, Madison; Aug. 17, Racine; Nov. 14 and Jan. 16, 1895, Milwaukee; March 13, 1895, Baraboo.

Maine Board of Pharmacy, at its recent meeting in Portland, granted certificates of registration to Edmund Wilson, Belfast; John K. Parks, Portland, and Lewis N. Messler, Manchester, N. H.

The Iowa Pharmacy Commission has elected J. H. Pickett president, W. L. Leiland vice-president and confirmed the previous election of S. J. Spaulding as secretary and treasurer.

Michigan Board of Pharmacy meets at the Star Island House, St. Clair Flats, June 25 and 26, for the purpose of examining candidates for registration. Meetings for examination will also be held at Houghton, Aug. 23 and 30, and at Lansing, Nov. 6 and 7.

Georgia Board of Pharmacy met in Americus May 7, and examined fifteen applicants for registration. The following were successful: Henry Gann, Columbus; R. W. Mitchell, Savannah; E. A. Gregory, Atlanta, pharmacists; E. B. Smith, Columbus, apothecary, and J. A. Adams, Waycross; E. M. Baker, Savannah; H. W. Doster, Rocky Ford; W. S. Elkin, Atlanta; Ed. P. Holley, Butler, and H. A. Munro, Ellaville, as druggists. S. C. Durban, Augusta, was unanimously elected chairman of the board, a position made vacant by the resignation of John W. Goodwyn. T. P. Marshall and James McMullen were examined May 8, and were given certificates as druggists. Roger Boyd was awarded the Sprague medal. Next meeting, Atlanta, Nov. 12.

John Rosch was recently elected Mayor of Menasha, Wis. Mr. Rosch is also a member of the State Board of Pharmacy.

Asa Foote, Druggist, was elected Mayor of Fort Atkinson, Wis.

JOHN S. MOFFITT.

John S. Moffitt died of consumption on the morning of May 18 was the substance of a message flashed over the wires, and which occasioned great shock to the drug trade. Mr. Moffitt was widely known and thoroughly liked, and particularly was he popular with the trade of the Central and Western States. He was in but the fortieth year of his age, having been born in Pittsburg, Pa., July 7, 1854. His entire life was passed in St. Louis, with the exception of the two years immediately following his birth, for in 1856 his parents removed to St. Louis, where his father entered the drug business with James Richardson. The boy John acquired his early education in the public schools, but at 14 years of age, at the death of his father, he found a family of five brothers, a sister and mother depending upon him for support. He found employment in 1868 as assistant in the laboratory of Richardson & Co., and, until 1889, was continually in service for this house, acting in various capacities and becoming thoroughly familiar with all branches and departments. While thus engaged he

became famous as a sundries salesman, showing a peculiar adaptability to this branch of the business. When on New Year's Day, 1889, the Richardson Drug Company's premises were destroyed by fire, and it was later decided not to continue the business, Mr. Moffitt secured sufficient capital, and with a number of the old employees of the house organized the Moffitt-West Drug Company, of which he was the president and general manager up to the time of his death. The business which he managed and directed has been steadily and increasingly prosperous, standing high in the estimation of its customers, and having acquired a reputation for integrity of dealing and reliability and rapidity in the transaction of business.

Mr. Moffitt always showed great interest in pharmaceutical affairs. The Missouri State Association owes its large membership to his exertions. In St. Louis he was a member of all the commercial bodies, and was highly connected in social circles. He always refused political advancement, preferring a successful bus-

ness career to the worrying life of a politician. He leaves a widow and one daughter, 14 years of age. Besides these there are three brothers, Andrew J., manager of the city department of the firm; Samuel, who is manager of the J. A. Pozzoni Complexion Powder Company, and Charles of the Merchants' Exchange. Mr. Moffitt was treasurer of the Fall Festivities Illumination Company, and took a deep interest in charitable enterprises.

The St. Louis Paint, Oil and Drug Club and Wholesale Druggists' Club adopted resolutions of condolence on the death of Mr. Moffitt. The funeral took place May 29, from the Union M. E. Church, of which Mr. Moffitt was an active member for many years. The services were conducted by the Rev. C. P. Masden, of New Haven, Ct., assisted by the Rev. R. I. Fleming and the Rev. Wilbur F. Williams. The pallbearers were Gov. E. O. Stanard, L. B. Tebbetts, George W. Parker, John W. Kauffman and Seneca N. Taylor.

TRADE COMMENT.

It is reported that Asiatic cholera, after spending the Winter in remote districts of Russia and European Turkey, rehearsing, as it were, for its usual Summer tour, will soon be ready to "take the road." Successful appearances are said to have been already made at Czenstochow, Poland, and in the neighborhood of Lisbon, Portugal. Advance agents will probably reach us by the middle of the Summer.

The Supreme Court of the United States has decided that it has no jurisdiction in the case appealed by Gov. Tillman of South Carolina from the Court of Appeals, which sustained the Commissioner of Patents in his refusal to register "Falmetto" as a trade mark for whisky sold by the State. As the Supreme Court of that State has decided that the Dispensary law is unconstitutional, the trade-mark decision will not occasion much worrying in that section.

The recent advance in the duty on spirits has affected the drug trade of England in much the same way that many of our most prominent men of the trade in this country predict as a result of the proposed increase contained in the Wilson bill. The English duty was raised from \$2.52 to \$2.64 per proof gallon, and this was followed by a raise on the part of manufacturers of from 2 to 6 cents per pound on tinctures and similar preparations. The retailer has to figure this raise in prices as an item in his aggregate loss account, as the advance is not great enough for him to advance retail prices in the face of competition.

In the report on awards made by the jury appointed at the Eleventh International Medical Congress in Rome, we notice that Messrs. Oppenheimer, Son & Co. (Limited) of London have been awarded the gold medal, the highest gift in the power of the jury to confer, for the quality, general excellence and originality of their pharmaceutical preparations, and for the purity and hitherto unobtainable high proteid digestive power of Pepsinum-Oppenheimer (which, it might be mentioned, is manufactured under the Webber patents). The members of the jury—which was constituted of the following well-known professors, Paterno, Rome, president; Daccomo, Modena; Peratonera, Catania; Hans Blinz, Bonn, and Monardi, the president of the Government Chemical Laboratory in Rome—were unanimous in their praise of the exhibit made by this firm.

Professor Monardi was especially interested in the range of pepsins exhibited by Messrs. Oppenheimer, a compliment shared by Mr. J. Le Roy Webber, the originator of the process. When the keen competition and rivalry which existed between the first houses of pharmaceutical manipulation represented at this Congress are considered, the success of Messrs. Oppenheimer is all the more noticeable, and reflects great credit upon the head of the house, Mr. William Oppenheimer, and the general manager, Mr. Robert E. Martin.

It is with this company that Mr. H. Baskerville Mason, son of Secretary Mason of Seabury & Johnson, is associated as special representative.

The money circulation of Japan is officially estimated at \$5,837,892 gold and \$20,481,307 silver. In August of last year one hundred silver dollars were required to purchase sixty-one gold dollars.

The case of the Stearn's Electric Paste Company and Joseph J. Kearney versus Adolph Cremlieux, for an injunction to restrain the defendant from manufacturing Stearn's Electric Paste, was decided in favor of the plaintiffs in the Circuit Court of Cook County, at Chicago, on April 30, 1894, and damages recovered to the extent of \$36, and an injunction was secured restraining the defendant "from at any time entering into the making of any article to be used for similar purposes as is Stearn's Electric Paste, either for himself or for others, whether under some other name or not." This decision was reached after five examinations before a master in chancery, from which it appears that the defendant sold his entire interest in the Stearn's Company on April 29, 1893, to Joseph J. Kearney, and signed a contract not to manufacture any article used for similar purposes. The plaintiffs showed that in June, 1893, the defendant was manufacturing Stearn's Electric Paste and using cartons which he had not turned over to the plaintiffs when the transfer was made. A temporary injunction pending a hearing was secured June 26, 1893, since which time the matter has been in litigation, with the result before stated.

Deputy United States Marshal J. D. Gore has completed the destruction of 6,000 bottles of bogus Worcestershire sauce, which has been stored at 114 Pine street, St. Louis, awaiting the final decree from Judge Thayer of the United States Court. The wholesale destruction is the result of a suit brought against the Western Distilling Company by Lea & Perrins, Worcester and New York, to enjoin them from manufacturing an imitation of the original Worcestershire sauce. On April 12 Judge Thayer handed down his decision and ordered that all the spurious sauce manufactured by the Western Distilling Company be destroyed. Marshal Gore with four assistants began the execution of the order a few days ago. Lea & Perrins have also obtained temporary injunctions against Davis, Rosenburger & Levy and Charles H. Dorsey of Galveston, Tex., and Carson & Foley of Houston, Tex. In the decision of the court it was held that the defendants had used the firm name, signature and wrapper of the plaintiff, and that every vestige of the wrappers, bottles, stoppers, etc., should be destroyed. Mr. D. E. Bennett, a representative of Lea & Perrins, is in St. Louis and has given the matter his personal supervision.

A NEW FUEL.

The following is Maestracelli's method of manufacturing petroleum bricks for fuel: Mix one liter of petroleum, 150 grams of turgitated soap, 10 per cent. of resin and 233 grams of caustic soda. Heat this mixture, being careful to stir it well meantime, until solidification commences—say about forty minutes. If the mixture should tend to boil over, pour in a few more drops of the soda, and continue to stir until solidification has sufficiently pro-

gressed, then pour the semi-fluid material into molds to form the bricks, and place these in a hot room or drying place for ten or fifteen minutes; then remove them and let them cool. In a few hours they can be used as fuel.

To the three elements which constitute the mixture, Maestracelli recommends the addition of 20 per cent. of sawdust and 20 per cent. of clay or sand, which make the bricks more solid and less expensive. Trials of these bricks as fuel have been made at Marseilles on several tugs, and it has been found that, weight for weight, they develop three times as much heat as the ordinary coal brick, and leave no ashes. (United States Consular Report.)

LOOK TO THE MOISTENERS.

Although the use of moistening apparatus is now common to almost the entire retail and wholesale cigar and tobacco trade, there still appears to be many dealers who do not fully understand how much depends upon the care given to them at the Spring and Fall of the year, and it is therefore necessary at these periods for us to sound the warning note, not only to the established people in the trade, but more especially to give advice to those young recruits who may be using them for the first season.

As soon as the steam heat ceases to be used, and the average registration of the thermometer approaches sixty, the moistening cabinets and cases should be emptied out and thoroughly scrubbed out with a hard brush and hot water, and the tin pans, tanks, etc., should be placed in the sun to receive a thorough warming and drying, as well as a practical deodorization, which no artificial heat can duplicate. Where sheets or pads of absorbent matter have been used they should be thoroughly rinsed out in at least half a dozen waters, and should also be placed in the sun, where they may thoroughly dry and warm through. These should then be returned to the cabinets and cases, and during the Summer no moisture whatever should be used except where the air is very dry, as is the case in the mountains and high-lying districts.

Practical experience, however, has proved that it is necessary during the cessation of the use of moisture to open the doors every day in the early morning for half an hour or so, while the day is yet cool, so as to give full ventilation to the goods. This, however, must not be done at the seaside or lake resorts, and it must not be done when the temperature is very humid and overladen with moisture. There are more cigars ruined during the Summer by cases and cabinets being left open on humid days at places located near the water than there probably is by any other type of negligence.

The idea of all this cleaning out and of the sun baths is to render the receptacles perfectly sweet before they are again used for stock, as during the Summer the interior of the cases will be several degrees lower than the outside midday temperature, and when the door is opened a sudden influx of heated air will materially injure the goods unless the greatest cleanliness is observed.—Tobacco.

THE MANUFACTURE OF CALOMEL IN JAPAN.*

By Edward Divers, M. D., F. R. S.

Calomel, in the form common in England and all countries under Western civilization, is now extensively used and is even manufactured in Japan, under the name of kanko. But mercurous chloride is also largely used there under the name of "light powder," keifun (Chinese, king-fun), in another and very much older form, which is of signal purity, and made by a simple process as yet quite unknown in Europe. I witnessed this interesting process from beginning to end some years ago, and now make this publication of it to the society, with full permission of the proprietor of the works I visited, Mr. H. Kokubu, who has aided me in every way he could, and notably with drawings, some of which illustrate this paper.

According to Terajima Kokyo and Ono Ranzan, writers who lived in the last century, the first-named perhaps a little earlier, calomel was known in Japan as far back, at least, as the beginning of the eighth century, having then been presented to the Empress Gemmyo; but their authority is the "Zoku Nihongi," reference to which, Professor Haga, F. C. S., informs me, makes it clear that mercury itself, not its chloride, was the thing presented. In the time of the writers above named, mercurous chloride was well known and was manufactured in Japan, not only at Isawa, a village in Ise, where it is still made, but also in the city of Osaka and in a town near it called Sakai. Mr. H. Kokubu, manufacturer, tells me that records exist at Isawamura of his family having carried on the manufacture of keifun there for the last 300 years.

Far earlier, namely, in the tenth century, Minamoto-no-Shitagao, in his work entitled "Wamyo-ruishu," makes mention of a mercurial preparation named kofun, or "powder of mercury." It is, however, questionable whether this was mercurous chloride or mercuric oxide, and therefore whether calomel was known or not at this time. But since calomel, under the name of keifun, is mentioned by Chinese writers even earlier than this, it may be safely accepted that Japanese knowledge of this body is older than ours in Europe. The Western knowledge of chloride of mercury dates from the first half of the sixteenth century, but the distinction between calomel and corrosive sublimate was not recognized till near the end of that century.

The literature on Japanese calomel is meagre. Japanese writers of the old school have contented themselves for the most part with translating Chinese writings. One Ranzan mentions that the Japanese method differs from the Chinese in making use of water in place of alum and other chemicals, in which he came near the truth. The late Dr. Geerts, a Dutch pharmacist, who in the government service did much in establishing Western pharmacy in Japan, treated of keifun in some metallurgical contributions he made to the "Transactions of the Asiatic Society of Japan." What he wrote is contained in Vol. IV, (1875), and consists of information almost exclusively about Chinese cal-

omel, and derived more from Chinese and Japanese writings than from any experience of his own. Concerning Chinese calomel English readers have the "Notes on Chinese Materia Medica," among the "Science Papers" by the late Daniel Hanbury, F. R. S., edited by J. Ince. Hanbury mentions, as the result of his own observation, the characters of kingfun and its great purity but for the presence of minute, transparent, acicular crystals of calcium sulphate. He refers to Porter Smith's "Contribution Toward the Materia Medica and Natural History" of China for an account of the manufacture. Smith, however, takes his information solely from Pearson's account on p. 59, Vol. III, of Sir J. Davis' work "On the Chinese." I have not seen this book, but it is clear from Porter Smith that Pearson again has only derived his information from the Chinese Materia Medica, Puns-tsaou-kang-muh, and not from his own observation, and it amounts to this; Common salt and mercury, of each 1 ounce; alum, 2 ounces, or salt, mercury, coppers, and saltpetre, in some such proportions are rubbed together and put into an iron bowl, which is then covered with a roomy earthen dish well luted down. This is exposed to the heat of a strong charcoal fire for four or five hours, when water is thrown on the cover and the cover taken off. On its inner surface the calomel is found adhering in the form of a beautiful feathery white sublimate. Ten parts of mercury are said to yield about eight parts of calomel. Dr. Geert's paper, already referred to, contains essentially the same account, translated from the Japanese version of the Chinese work.

Lastly, there is a paper in the Japanese language on the manufacture of keifun at Ise, which is the forerunner of the present one. That paper appeared in 1857, in the Journal of the Tokyo Chemical Society, written by Mr. T. Shimidzu, M. E., F. C. S., my former pupil and colleague, and it was his description to me of what he had seen that led to my own visit to Ise in company with Professor Haga in the following year. In one or two points I have availed myself of this paper to make my own account more complete.

Keifun is in very thin, minute scales, lustrous, transparent and white or faintly cream-colored. It might be described as micaceous calomel. To the touch it is soft and smooth. Measured in bulk, dry, it is four times as voluminous, more or less, as the ground calomel prepared by the European process, and can be readily scattered by a puff of the breath. Rubbed hard in a porcelain mortar, it gives the brown resinous streak characteristic of calomel, and the evidence, therefore, according to pharmaceutical authorities, of its freedom from corrosive sublimate. Exposed to bright sunlight, it gradually assumes a light brown color; a color, that is, having no affinity to gray or black. Moisture does not seem to favor this change, which is certainly not owing to any reduction to metal. European calomel suffers a similar change. Keifun is free from corrosive sublimate and from metallic mercury.

Hanbury found selenite in Chinese calomel, and Geerts found calomel of this form generally adulterated with selenite and mica; but whether what he examined was ever Japanese and not always im-

ported Chinese calomel he does not show. I have found keifun as it came direct from Ise quite free from adulteration, and have not met with any adulterated.

The materials for making Japanese calomel are mercury, an arenaceous red clayey earth, bay salt, bittern or salt mothers and air. The mercury is imported from Europe, but in old times it is said to have been found in the neighborhood of Ise, as cinnabar.

The earth, called mitsuchi ("seed earth"), is all taken from a neighboring hill, Shunakayama, and, according to Mr. Kokubu, many other clays have been tried in place of it, always with bad results. It is of a rather light brown red color, which changes to a duller and somewhat brown red on drying and gently heating the earth, and to a light ordinary brick red by a strong heat. As mined, the earth is seen to consist largely of colorless quartz grains. Besides the quartz a very little biotite is seen sparkling through it. The fresh, damp earth does not form a compact mass, but a slightly cohering aggregate of damp crumbs. This texture appears to be due to the earth being a mass of quartz in small grains, from the size of a hemp seed down to that of impalpable particles held together by plastic clay. For use, that which does not contain coarse quartz grains too abundantly is selected, and it is made into briquettes and moderately baked on the hearth of the fireplace under the calomel pots. These briquettes are then as light and porous as the prepared porous clay used in Fletcher's gas furnaces. The raw earth, air-dried, is readily rubbed into its constituents by the fingers; and the baked briquettes very easily and rapidly reduced to a soft powder, quartz grains and all, in the agate mortar. The larger grains of quartz in the raw earth are also very brittle. I have treated thus fully of the mechanical characters of the earth, because probably much of its efficiency is due to them; but its chemical character also calls for notice. As baked ready for use, it contains in the thoroughly air-dry condition still 5 per cent. and more of water. Before ignition it is almost entirely decomposed by sulphuric acid, either in some days in the cold or quickly by heat. It is also largely acted upon by hot hydrochloric acid; and, heated in sealed tubes with this acid to 120 to 150 degrees, it is almost as fully decomposed as by sulphuric acid. It contains practically no silica soluble in hot sodium carbonate solution, but after acid treatment yields, of course, much silica to this reagent. The composition of the earth, as found in use at the works, but rendered anhydrous, is as follows:

Quartz.....	33.4
Combined silica.....	24.2
Alumina.....	26.3
Ferric oxide.....	10.5
Magnesia.....	0.3
	99.7

The magnesia is only got by fusion of the finely-ground earth with alkali carbonate, and belongs to the particles of mica scattered through it. Only doubtful traces of phosphoric acid could be found, and, what is specially to be noted, no lime whatever. The earth is thus nothing but quartz, kaolin, ferric hydroxide, and a very little biotite, and is probably valu-

* Published in Journal Society Chemical Industry; reprinted from Am. Jour. Pharm.

able to the calomel maker, not only for its highly porous texture, but also for its negative chemical qualities.

The bittern and even the rough hay salt contain magnesium chloride, and this rather than sodium chloride must be the source of hydrochloric acid in the process. That air finds a graduated entrance to the other materials by diffusion during the process will become evident from a consideration of the set-up of the apparatus.

The apparatus for making Japanese calomel consists of a table-furnace supporting sixty cast iron pots lined and surmounted with the Shunakayama earth or mitsuchi, on which rest, as covers and condensers and receivers of the calomel, unglazed clay cups, bottom upward.

In Fig. 1 the furnace as it is when in action is seen from the working side; ten pots on the left side are shown still to be charged and covered. The wooden step in front enables the workmen to reach over the table easily when charging the pots or emptying them. In Fig. 2 the furnace is seen from the back or firing side, and with the walls broken away to show its interior and the method of firing. In Fig. 3 the mounting of the pots is shown in three stages by sectional plans of the table.

On a smoothed clay hearth the walls of

FIG. 1.

the furnace are raised in clay, building in the three stones which frame the stoke hole (Fig. 3). The walls are 2.6 feet high and the inclosure is 7.6 feet by 4.7 feet, measured outside. The stoke hole is 1 foot by 1 foot, but a little wider than this at the base, and is without door. The table of pots and roof of the furnace is constructed (Figs. 1 and 3) by laying a square iron rod on each of the long walls, and on these 11 cross rods, also square, on which are to rest the flanges of the pots. The pots are then put in position as close together as possible, hanging by their flanges, in ten rows of six each, and plastic clay pressed into the openings left between the flanges and the roots, and the roots and flanges covered in so that only the mouths of the pots remain visible, as shown by the middle rows in Fig. 3. The furnace clay being thoroughly dry, it is deeply laid over with the red earth mixed with a little bay salt and moistened with bittern in small quantity. The pots are also filled with the same moist red earth, except in a central cylindrical shaft (see the left side of the furnace table in Fig. 1 or the right side in Fig. 3), reaching to the bottom of the pot, which is left bare. The pot is 0.5 feet deep inside, and across its mouth, inside, is 0.45 feet. It is shown

in Fig. 4. The shaft or cavity left in the lining is 0.18 feet in diameter, and is shaped by resting a wooden core on the bottom of the empty pot, and then pressing in the moist earth around it, smoothing off the top, and dropping a perforated board over the projecting core to hold

FIG. 2.

down the earth while withdrawing the core, which is then removed by its handle. The furnace is now ready for work. It should have been mentioned that after the clay walls of the furnace are built they are framed in with wood to increase their stability and to give support to a wooden back and to shelving above the table, as seen in Fig. 1.

The firing the pots is kept far below what are usually regarded as furnace heats. The fuel employed is wood, and the Japanese are clever in the use of this economically and effectively in firing pots for boiling, evaporating, distilling or subliming. The method of heating is seen in Fig. 2. Five lengths of firewood are ranged along the back and front walls on the hearth, generally raised at one end by resting on a lump of clay. In the ordinary working of the furnace as I saw it, the heat from previous work is sufficient to kindle the fresh wood. The flames rise up the sides and run over the bottoms of the pots, leaving the central space in the chamber free from flame. The air enters by the lower part of the stoke hole and the products of combustion escape invisibly by its upper part, so perfect is the combustion. At the time of first lighting the fire, and of irregularities in stoking, some smoke is unavoidable, and to keep the top and table free from this smoke and from ashes, a wooden back is put in above the table, as shown in the figures.

FIG. 3.

There are also a wooden hood and flue above the stoke hole to carry off any smoke; this is not shown in the figures, but is similar to those put up in England and elsewhere over the working doors of furnaces to protect the workman from

arsenic, sulphur or other noxious fumes. The heating is so well effected that the pots, two feet above the burning logs, are made sufficiently hot, barely red-hot at the bottom, and yet the wooden frame on the outside of the furnace is not charred and the workroom is not unpleasantly warm.

About three bundles, or forty pounds, of wood serve for one firing, and it is remarkable to see so little fuel working so many pots.

A compost of burnt mitsuchi with about a fourth of its weight of bay salt is made up with bittern into lumps the size of large chestnuts.

The furnace being hot enough the mitsuchi surface of the table is once for all freely wetted by a watering pot, perhaps half a gallon of water being used, all of which is absorbed; a lump or two of compost is dropped, by tongs or by hand, into each pot in rapid succession, a very small spoonful of mercury poured into each pot, the total charge for the sixty pots being somewhat less than one pound avoirdupois (more exactly five-sixths of a pound), and a clay cup, bottom up, placed over each pot and adjusted by gently pressing

FIG. 4.

(a) Tongs for lifting and dropping the lumps of wet compost into the pots. (b) Clay cup condenser. (c) Brass mercury spoon. (d) Iron heating pot. (e) Rectangular iron bars for pots. (f) Wooden core and board for lining pots. (g) Bamboo water pot for wetting furnace top. (h) Quill feather for emptying cups. (i) Peel for lifting compost ball out of pot.

and turning it round slightly. The cup is thus made to fit neatly on the earthen top without adhering to it in the least. The cups are thick and unglazed, but become very smooth inside by use. They have an inside diameter at the mouth of six inches and a depth of three inches.

Thus arranged the pots and cups are left for three hours, and during the latter part of this time the furnace is cooling. When cool enough each cup is lifted in turn, and with two turns of a feather, the kelfun or calomel, which fills it in the form of a sparkling network of delicate crystalline scales, is transferred to a sheet of paper held under it, and the cup, mouth downwards, placed on a shelf of the furnace ready for use in the next operation.

The calomel, it will thus be seen, forms no adherent cake in the cup, but particles only loosely hanging together. So ob-

tained, it is ready for the market, needing only to be packed in small wooden boxes for sale.

The spent lumps of earth and salt are lifted out of the pots by the tool shown in Fig. 4, and when the furnace has become still cooler, the fire is made up again, the furnace top freely wetted, and a new operation set going as before. The furnace is worked twice each day. Nothing could well be carried out with greater simplicity and less expenditure of labor and time.

The loss, I am told, is about 16 per cent. of the theoretical amount of calomel, which is, I believe, about twice as much as is lost in the Western process.

If one of the cups is removed a few minutes after the operation has been started much of the mercury is found in it as a sublimate of fine globules, mixed with only a little almost amorphous calomel, from which it would appear that the formation of the calomel results from reaction in the cup between the mercury in vapor and the active gases.

On dipping into the pot, uncovered during the process, a glass rod with a drop of water hanging to it and then withdrawing it, and testing the remainder of the water with potassium iodide and starch, no chlorine can thus be detected. The same is true when a drop of solution of potassium hydroxide is used. Nor can the slightest odor of chlorine be detected in the vapors issuing from the uncovered pot.

On passing air, containing a little hydrochloric acid gas, through a tube in which mercury is freely boiling, sparkling calomel is formed close to and mixed up with the mercury.

Red earth which has been used in the process turns moist, red litmus paper blue, while fresh red earth is neutral.

The nature of the materials used and the observations gained by the preceding experiments are sufficient to establish that the calomel is formed by a reaction between mercury vapor, oxygen and hydrochloric acid gas, in which, along with mercurous chloride, water is formed—

and that the formation takes place at a temperature near—above or below—the boiling point of mercury, and much below that at which calomel freely volatilizes. The source of the hydrochloric acid is certainly the magnesium chloride of the bitter and bay salt which, heated in a moist atmosphere, even in the presence of sodium chloride, is, as is well known, partly converted into magnesia and hydrochloric acid. Hence the alkalinity of used mitsuchi.

The porosity of the walls of the apparatus, particularly of the layer of mitsuchi on which the clay cup rests, must be more than sufficient to allow enough air to enter during the working. I had supposed that the hot hydrochloric acid and air might, in contact with the earth, have yielded a little chlorine, but the temperature reached in the process normally worked seems never to reach that required for the liberation of chlorine.

The Chinese process, if correctly described, differs from that used in Japan in several material points, one of which is that the mercury is intimately ground up with the other materials, and one fails

to see what reaction can take place between it and the two others, namely, salt and alum. Heated, the mixture must give off mercury and hydrochloric acid, and then these, as in the Japanese process, will, with air, give the calomel, but this is independent of the previous intimate mixture of the mercury with the salt and the alum. Another point is that in place of the magnesium chloride of sea water as the source of hydrochloric acid, the Chinese are said to use alum or coppers, which, with the salt, will react to give hydrochloric acid. A third point is that the cover is said to be closely luted to the iron pot, which must nearly exclude the air, without which it is impossible to explain the formation of the calomel. Perhaps this is the reason why the Chinese process is said to take four or five hours' firing, since this may give time enough for the needed oxygen to diffuse through the cup and luting, it will also account for the fact, if it is one, that the yield of calomel is markedly less in weight than the mercury used. Again, there are to be noticed the statements that the iron pot is exposed for hours to the strong heat of a charcoal fire, and that the hot clay cover is cooled by throwing cold water on it, statements which must be regarded as greatly exaggerated if not erroneous. Lastly, the calomel-giving vapors are allowed to remain in contact with the hot iron of the pot, instead of being kept from it by the thick lining of earth provided in the Japanese process, a contact which such vapors could not stand without destruction. I think, therefore, that we may be fairly doubtful whether any reliable description has yet been given concerning the Chinese process, which we may expect to find differ little, if at all, from the Japanese process, except in salt and alum being used in place of the mother liquor of sea salt or "water," as One Ranzan supposed it to be.

One thing to which attention may be called is that the Chinese are stated to add some nitre to a similar mixture when employed to give corrosive sublimate. For that being the case, it is seen that free chlorine which would here be developed from the salt, nitre and alum, is necessary for the production of the higher chloride, and that air and hydrochloric acid can only yield the lower chloride, a difference of much theoretical interest, and, indeed, of practical moment also. It is known that re-sublimation of calomel generates some corrosive sublimate, and, although authorities are not quite agreed as to whether reaction occurs between gold leaf and calomel vapor, it is hardly to be doubted that such reaction does occur. Now I have found that if in the Japanese apparatus the temperature of the cover be raised sufficiently to volatilize much of the calomel the remaining calomel is no longer free from corrosive sublimate. It must, therefore, be borne in mind that the calomel formed in the Japanese process is not, and cannot be, the result of true sublimation, but of precipitation as fast as formed from the three gaseous bodies which give rise to it. At the temperature at which mercury boils calomel is either quite fixed or, at most, has a vapor of exceedingly small tension. In the two facts that the three gases do not react to yield corrosive sublimate and that the calomel is not heated to its

volatilizing point, lie the explanation and, at the same time, the assurance that Japanese (and Chinese) calomel contains no corrosive sublimate.

The Japanese prepare calomel pure, above all things free from corrosive sublimate. They heat balls of porous earth and salt soaked in bitter along with mercury, in iron pots lined with earth. The heat forms hydrochloric acid from the magnesium chloride in the bitter, and the mercury sublimes into the closely fitting but unattached clay covers of the pots. Air enters by diffusion and oxygen and hydrochloric acid gas act together in the hollow cover on the vapor given off from the sublimate of mercury there formed. The cover thus becomes filled with a network of micaceous particles of calomel, precipitated at a temperature below its subliming point at the moment of its formation.

This investigation of an interesting product of Japanese industry has been carried out under the authority of the Imperial University of Japan. I cannot acknowledge fully enough the indispensable assistance I have received from my colleague, Assistant Professor Haga, F. C. S.

COLLECTING AND CURING GINGER IN JAMAICA.

By Wm. Fawcett, Director of Public Gardens and Plantations.

The collector-general reported that during the year the average prices realized for ginger in several parishes were as follows:

Kingston, 50-55 shillings per 100 pounds; St. Ann's, 50 shillings per 100 pounds; Trelawny, 36-41 shillings per 100 pounds; St. James, 52 shillings per 100 pounds; Hanover, 45 shillings per 100 pounds; Westmoreland, 60 shillings per 100 pounds; St. Elizabeth, 30-48 shillings per 100 pounds; Manchester, 163-40 shillings per 100 pounds.

Information was sought from the collectors of taxes as to the reasons for the varying prices, whether proceeding from the difficulties in curing or from some other cause, and also as to the method of curing in different parishes.

It appears from answers with which I was favored, quoted below, that the variation in prices in the different parishes arises generally from causes independent of curing, but that low prices anywhere indicate want of care in curing, or that ratoon ginger is harvested. This latter product consists of the pieces of ginger left in the ground after harvest, and are dug up the following season and sold at less prices than the first crop. Further consideration will be given to this subject, and I hope to visit some of the districts when the harvest is being brought in.

Hanover Collectorate.

"My remarks in my last quarterly report were based on ginger which came under my observation as several lots were sold to the traders here mildewed, and in one or two cases soft and spongy. I inquired at the time what was the defect in curing which had caused the depreciation in the condition and quality of the ginger, and I was told that ginger, to be successfully cured after it is scraped, must be kept away from the damp or rain, and be subjected every day to exposure to the sun in a dry

place, until it is perfectly hard. The ginger mildewed had not received proper attention in this respect, which accounts for the low price which the ginger of this parish brings; and the soft spongy ginger had not arrived at proper maturity, otherwise grown, and had been put away damp into bags. I thought, as the matter at various times came within my notice, that this want of proper attention to a valuable commodity was productive of a great loss. In the Seafort Town District I understood that greater care is exercised, and as a result much higher prices obtained.

"E. P. Fuller.

"Revenue Office, Sav-la-Mar."

"As far as I have been able to ascertain, the price obtained was not so much due to superior preparation by the producer as to competition on the part of purchasers.

"I am able to state that the mode of preparing ginger in this parish is by scraping and washing and carefully drying it in the sun.

"The low prices given in the early part of the season are for ratoon ginger, which is often reaped before it has attained maturity, and almost immediately mildews for want of constant sunshine, which prevails only later in the ginger season. AUBREY G. FACEY.

"Internal Revenue Office, Black River."

"The information I have been able to gather is this: The ginger is scraped and peeled with knives by the growers. The knives are specially imported and known as ginger knives. The ginger is then washed once or twice and turned out to dry on mats, care being taken to provide against mildew.

"I have never heard of ginger being boiled for purposes of curing. I should imagine that such a process would deteriorate its strength and impair its value to an appreciable extent.

"The difference in price is due to the quality of the ginger as well as to competition. A very superior description is grown at Seafort Town in Westmoreland, on the borders of St. James, and owing to a very keen ginger trade done in Montego Bay, where most of this commodity is taken, the Westmoreland traders, if desirous to compete, must be prepared to outbid the traders from Montego Bay.

"In the Piskah Districts of this parish a good quality of ginger is cultivated, which has been known to fetch 54 to 58 shillings in Black River, but the bulk of the ginger brought down to Black River is of an ordinary description, where there is little or no competition, which accounts for the differences in prices between St. Elizabeth and Westmoreland.

S. E. PAYNE.

"Collectorate St. James.

"The process of removing the skins of ginger by means of boiling is not known in this parish so far as I can gather, and is regarded as one calculated to reduce the spice of the article and lessen its value as such.

"The mode adopted for removing the skin is by paring with a sharp, thin, narrow-blade knife (properly called scraping) a protracted and tedious job. It is then dried on a paved terrace, boarded platform, or mats made of the stalks of the leaves of the banana or plantain

are being taken at the time while drying, but the ginger does not get wet, and, at the same time it is frequently and carefully turned over to avoid mildew.

"I am afraid the price obtained between one parish and another is no criterion of quality, so long as the ginger is not at all passable; it depends on the demand for the trade for the article by the exporting merchant during the particular season, to fulfill an obligation to supply a certain quantity probably, and it therefore must be procured, if even at a loss. This principle descends to the smallest shopkeeper, who finds it at times to his advantage to procure as much ginger to be placed to the credit of his account with larger traders, with whom he may be dealing, and who in turn may be equally glad to get such a remittance at a given time even in preference to cash.

"I have no doubt that produce is thus procured at prices unwarranted by the ruling market's value abroad, and the small shopkeeper probably discovers for the first time, when he delivers his purchase, a loss in weight, and likely in monetary value, too, from depreciation in quality, and so on with the next man in his turn. J. W. GRUBER."

Collectorate Manchester.

"Ginger—There are two descriptions grown here, the yellow and the blue, the yellow being the superior quality. To obtain best ginger it must be planted every year on virgin soil; it is ready for harvesting from March to December in ratoon, and plant-ginger after Christmas up to March and April. The crops grown on the same land after the first year are called ratoons, first, second, third, respectively. The gathering is much after the manner of taking in a potato crop, the pieces of stems (from which the ginger is taken) being left in the ground, and, matted up, are what form the ratoons which year by year become inferior in quality and is abandoned when it cannot bring more than 16 shillings per 100 pounds.

"Ginger said to be grown in Manchester, the bulk of it comes from over the border of the parish some miles away in Trelawny, St. Ann and Clarendon. It is purchased in centres there up to 40 to 45 shillings per 100 pounds, according to the fineness in quality (it takes some years to be a competent ginger-buyer), the purchaser having to transport the same. The best descriptions are brittle and easily broken, which depreciates its value. Considering its bulk and lightness, a heavy item for cartage has to be added: A barrel of the best quality will be many pounds lighter than the inferior; some finds its way to Montego Bay; what comes this way is shipped via Kingston, a distance of over ninety miles from where grown. The distance for transport is not so great in Westmoreland, Sav-la-Mar and other places. This may account for the difference in prices between this and the Westmoreland ginger.

"It may be that the Westmoreland buyer pays too high, or that the grower abandons the ratoons and keeps to the growing of new plant-ginger every year, and so maintains a uniform price, or that the soil is better adapted and yields bolder samples, hence better results. The writer

is inclined to the opinion that the difference in prices arises from the difference in root and rill carriage. It may be noted that some of the ginger shipped from the districts stated 'via Manchester' brings the highest price in the English market, which will go far to prove that the quality can hardly be considered inferior.

"Preparation of Ginger.—When taken out of the ground it is washed free from dirt, then experienced hands peel between what are called the toes, to avoid their being broken off, as the large branches or bold pieces bring the best price. It is then handed to less experienced hands to peel off the outer portions of the skin. The knife used has a very narrow blade, which is riveted into the handle and cannot shut. The blade cannot be too thin and narrow, as it has to cut between the toes, which grow very close to each other. When peeling is finished each piece is thrown into a bowl of clear water, and afterwards thoroughly washed, then put on mats, i. e., stands are made of crutch-sticks driven into the ground and of even height; strengthening pieces to in parallel lines. Mats made of thatched palm are then spread, and drying commences. The ginger must not get wet when once it begins to dry, and is then taken in every evening. Some parties use lime juice in washing, with a view to make the ginger white and insure a better price. It is invariably found when so treated that it mildews, thus injuring and considerably reducing the value. No ginger is as that which is washed in pure, clear water properly, and thoroughly dried.

"Curing with Boiling Water—I am glad to say that it is not resorted to on this side as far as I am aware.

"In view of the constant demand for virgin soil for the production of fine ginger, its exhausting effects on the soil, the wholesale destruction of valuable timber in forest lands fire being the only agent for cleaning up for planting, one can only realize by a visit to the district the alarming destruction from year to year going on, the drying up of streams, the tens of thousands of pounds of valuable timber lost in smoke; the now varying rainfall, the soil becoming so impoverished that only ferns will grow on it afterwards, with other attendant evils. The conclusion arrived at is, the sooner the production of ginger is abandoned the better. A howling wilderness of barrenness marks its progress in every direction, and the worth of ginger is the outcome of ten times the destruction. GEO. NASH.

"Bulletin Botanical Department, Jamaica, through Am. Jour. Phar."

INSTRUCTIONS TO SALESMEN.

Mr. F. Madener, a prominent Chicago merchant, attributes much of his success in selling goods to an observance of the following rules which he has compiled for the use of his traveling men. They appear to be of such general application to all departments of trade that we reproduce them as they originally appeared in *Mida's Criterion*:

INSTRUCTIONS.

Report at the office the exact time at which you start to go on a route. Do not deviate from your route except you hear of important business, but even then await my advice by telegram before changing the route.

After starting out on a trip, finish it without going home, and then going out again on the same road, except in cases of sickness or unavoidable circumstances; in all cases, however, inform the office at once of your intentions.

If you arrive from a trip during business hours, call at the office before going home.

Report in writing every day, as only for those days of the trip on which letters or postal cards were sent expenses will be allowed.

Always keep me informed where letters can reach you in three days. Inquire for letters or telegrams as soon as you reach a town and before you leave it.

Report all prospective sales if customers intend to come to the city, and ascertain the time of their arrival and their stopping place.

The regular time given on goods is 30, 60 and 90 days; give a full report in all cases where the bills are running over four months, and if parties do not pay, make arrangements for payment and report in detail about it.

All sales which have been running over six months will be deducted from your credit sales account, as the time lost and expenses incurred for collection will swallow up the commission.

Report also the reasons when customers refuse to buy.

If you know of a chance to sell to parties with whom you cannot deal on account of some former trouble you may have had with them, do not ignore them but notify me of the fact, so they may be attended to in some other way.

Endeavor to get new and good customers wherever you go.

If any business too complicated for you should turn up, report the same at once and do not leave the locality until you hear from the house.

In making close sales, state the time, which you should make as short as possible. Close buyers cannot expect much money spending of long time.

If you have orders outside of my line of business, report them to the house, and I will attend to them in the interest of the customer. I do not allow the selling of other goods and making commissions thereon.

When the whole trip is finished, make statement of same; report all matters that you might have overlooked in your daily reports, take a rest of some days, according to the length of the trip made, get all the rest you can, but call at the office every day, and if you have any suggestions to make which will be to the interest of the house, you are requested to do so.

Deliver all the money collected, deducting expenses, at the office, and draw your salary from the cashier in the same manner as all other employees of the house.

Try to do business during business hours and as early in the morning as possible. Do not visit customers after supper if you can help it, as this is the time to make out daily reports and cash accounts. Stop at good hotels.

All orders brought by you personally you must enter in the order book yourself, so as to avoid mistakes, and if any should have been made, to find out who made them, also look over all orders sent in by you during your last trip.

These rules must be strictly observed and are not to be regarded as a dead letter.

TO CURE HARD-DISEASE FALLER-FIT BY WORDS.

OR TREATMENT WITHOUT MEDICINE

BY WILLIAM T. HUFFNALLE.

I am now Prepared to Cure "HARD-DISEASE,"
FALLER-FIT by Treatment of words, and if
I can not cure in one session I
WOMEN is suffering say
of these Diseases, should write to me.

ANY MAN OR

of these Diseases, should write to me.

TRIAL ORDER,

no need to be done. All that you have to do is. Write to
me and I will send you the book. I give it to you
 Respectfully yours.

WILLIAM T. HUFFNALLE,
KALPELLA, INDIANA

CHRYSTAL

A "WORD" CURE.

One reads with curious interest of the ancient practices for the cure of "king's evil," or the incantations of savage medicine men, and the time and environment for such things seem far distant from us. It is quite true that in certain sections of the country the "blowing" of fire from burns, the "measuring" of children to prevent "stunted growth," various mysterious operations for the cure of warts and the carrying of buckeyes to cure rheumatism are popular practices, but it has always been supposed that in localities where such curative methods were in vogue the schoolmaster did not stir much abroad, and the power of the printing press was not making itself felt. A friend of the Era has, however, discovered a brilliant exception, which seems to clothe the foregoing observation with the dignity of a rule. In the instance noted modern methods are made to support old ones. That great engine of civilization, the printing press, lends its aid in support of therapeutic ideas which were, perhaps, extant in the fifteenth century. The advertisement shown herewith, which is taken from "Printer's Ink," is a photographic reproduction of a handbill which is being circulated in the vicinity of Grantville, Pa. It speaks for itself, and extended comment upon its salient features might spoil the effect upon the reader. The typographical style of the "ad." savors somewhat of the "way-back" period, and the spelling may have been borrowed from "Canterbury Tales," but this phase of the subject is not one for unreserved ridicule. We doubt very much whether any of our bright advertising experts could take this matter in hand and design an "ad." which would attract as much attention, or could present the subject in such a way that every word would be read. Although this individual who refers to his professional services as a "trial order" might find condemnation in the code of ethics on account of his penchant for advertising, yet our brethren of the regular profession will recognize the fact that they must use words themselves (and strong ones, too), in dealing with such competitors. The sociologist might find here a pre to his own liking, while the advertising crank may look at the production for a long time and wonder what there is in the crude arrangement which attracts attention.

THE RETAIL DRUGGIST AND THE INCOME TAX.

To the Editor:

H. R. 4864, "An Act to reduce taxation to provide revenue for the Government, and for other purposes," as it is officially known, or the Wilson tariff bill, as it is popularly known, imposes a tax of 2 per centum on the amount of all individual incomes in excess of \$4,000.

Now, of all taxes, it would seem this tax would be the last to interest the retail druggist.

While the balance of the world for some unexplainable reason seem to believe the drug business is all profit, and believe the druggist to be an envied mortal, who has nothing to do but to rake in the greenbacks, the druggist himself knows only too well how far away the realization is from the popular conception. Not many druggists will be called upon to pay the 2 per centum on their incomes under this section.

There is another section of this bill, however, that taxes his income, and levies the tax in such a way that there can be no escape. The bondholder and capitalist may dodge their taxes, but this tax on the druggist's income is one that cannot be dodged.

If he does business he must pay it, and the more business he does the more he pays.

The bill increases the tax on proof spirits 20 cents per gallon, or 36 cents per gallon on alcohol; alcohol will cost him at least 5 cents a pint extra if this increased tax stands, as the distiller is entitled to the fraction of a cent extra for interest and profit.

The druggist's tinctures, liniments and other alcoholic preparations that are sold by the ounce, afford him a good profit; they are about the only things left him that do afford a good profit in these days of cut rates and combinations. The difference in cost on each ounce is too small to allow of an increased charge; they will still be 5 cents or 10 cents an ounce, as the case may be. The increased tax will come entirely out of his own pocket.

An average druggist, we will say, uses three barrels, or 140 gallons, of alcohol a year; the increased tax (not counting the distiller's charge for interest and profit) is 36 cents x 140, or \$50.40. Now, assuming the average income of druggists to be \$1,000 per year, this amounts to a tax of 5 per cent on his income.

So, while the individual whose good fortune it is to enjoy an income in excess of \$4,000 per year is taxed 2 per cent on the excess, the person whose income is less than \$4,000, if he is unfortunate enough to be a druggist, is taxed 5 per cent on his entire income, and there is no possible way of his shifting or evading this tax.

The distiller promptly raises his price, adds a profit and goes on rejoicing, as well he may, for he makes a fortune by adding the tax to existing stock on which he has paid only the old and lesser tax.

With the manufacturing druggist it is not quite so easy, I am sorry to say, to add the tax to his selling price, but eventually he succeeds in doing so.

The saloonist easily recoups himself, merely softens his spirits with a little more water.

The druggist will not and can not dilute

his tinctures, he cannot add to the price, he must pay Uncle Sam out of his own pocket.

This tax on the retail druggist is wrong. It is an absurdity.

It should be prevented.

Prompt, positive and decisive action by all druggists of all sections alone can overcome this threatened misfortune. By acting singly, and also collectively through their State and local associations, much good may be accomplished.

The increased revenue it is necessary to provide for in this bill, it seems to me, might be raised by an increase in the tax on beer, and not increase the tax on alcohol.

Beer at present is taxed but 92 1/2 cents per barrel of thirty-one gallons.

Increasing the tax to \$1.00 per barrel would increase the revenue \$3,664,317.

The proposed increase of tax on distilled spirits will add to the revenue but \$19,610,000.

Gain to the Government by increasing the tax on beer and leaving the alcohol tax as at present, \$14,944,517.

This shows that the proposed increase of tax on alcohol is unnecessary—any unnecessary tax is wrong.

An increased tax on beer would cripple or injure no business or industry.

To the brewer it is merely a question of specific gravity. If he is working, for instance, at 1.065, he brings the gravity down to 1.050, and the thing is done, the tax is paid, no increase of price to his customers, no one's profit disturbed, and the consumer is as well or better served than before.

For the benefit of the trade in general and the retail druggist in particular, this objectionable increase of the alcohol tax should not be made.

I have a printed petition gotten up in form suitable for presentation to Congress, that I will mail to any druggist wishing it, who, by obtaining signatures to the same and forwarding it to his Congressman, will do his share toward accomplishing a much desired result.

FREDERICK F. INGRAM,
Detroit, Mich.

SCHEMES FOR ADVERTISING.

Belton, Tex., April 18, 1893.

To the Editor:

I inclose you a sketch of a little device that I have been using for some time, and which I think is a clever little arrangement with which to stop passers-by in front of your store, and, possibly, lead them inside, where nine times out of ten they will spend some money with you. This device is nothing but an eccentric, so arranged in a wooden frame that when set in operation it moves a wooden rod back until it reaches the farthest point of the eccentric, when suddenly the rod is released and drops back, causing a placard out on the sidewalk (suspended above the sidewalk by a string connected with the rod worked by the eccentric) to drop down suddenly about 6 or 8 inches, and this is again very gradually drawn up and suddenly dropped as before. This operation repeats itself about five or six times every minute; of course, the larger the eccentric the fewer drops each minute, granted that your power has the same speed. I run this device with a small electric

Embree's Eccentric.

motor, which cost me \$10 and which develops about 1-32-horse power. This same dynamo also runs a Ferris wheel 6 feet in diameter, and is fed by three batteries such as are used in any telegraph office, only they are larger, having about 6 pounds of sulphate of copper and a zinc block about 5 by 8 inches, and 1 inch thick, which is separated from the blue-stone by about 2 inches of sawdust. Cards can be changed daily, calling attention to any special article that you have just received. The larger the eccentric the greater will be the drop.

I also inclose you a rough sketch of the casting-box which I use in making my plates, or, I should say, cuts. (See pages 438-9, Era of May 1, Ed.) A chalk mixture is placed on the bottom steel plate and allowed to dry over a slow fire, when you are ready to do

fact: that I have never seen a stereotype or casting-box as used by regular houses in this line of business. However, my box serves by every purpose, and can be made at any foundry for from \$5 to \$10. It, of course, has to be made from steel, and the plate on which you do your engraving has to be perfectly smooth in order that your finished plates or cuts may make a good, clear impression. The wooden cores shown in the sketch are also my own idea, and serve the purpose, as you know, to reduce the amount (weight) of metal used. If any of my brother druggists wish to take up the work of doing their own advertising by the use of cuts as I do, I would suggest that they procure some good work on stereotyping and study it well, and they will have no trouble, as far as knowing how to do

Stereotyping Apparatus.

your engraving. When you have finished your engraving, melt your type metal, and after your casting-box has been well heated pour in your melted metal and you have your cuts, which have to be trimmed with a plane. They are now ready for the press; the black prints are written on cardboard with heavy ink, which leaves the lines raised, then cast as before. The stippled plates are done in the same manner—that is, on heavy cardboard, and cast as above stated. My casting-box, I imagine, is rather crude, from the fact that it was gotten up by myself, in the face of the

work; but they will have to burn a quantity of midnight oil if they do their own prescription work in addition to their own advertising work. Yours very truly,
A. J. EMBREE.

One of the important features of the International Medical Congress, lately held in Rome, was the exhibition of many of the products of manufacturers of pharmaceutical preparations. Among the latter was the well-known American firm of Wm. R. Warner & Co. of Philadelphia, who were the recipients of a silver medal awarded by the congress.

SAMPLE OF EFFECTIVE ADVERTISING.

To the Editor:

I have been greatly interested in the "samples of effective advertising" appearing in your columns. Let me give you a few ideas that have not yet appeared. I have used the illustrations that Jack Embree advocates, but with this added idea: At the beginning of the year I secured one-fourth column in our best local paper (weekly), and made arrangements to change each week. This is a great point. Educate the readers of the paper you advertise in to look for something new each week (if a weekly), and then have something in your space worth looking for. In my case I promised a present to each person who would cut out my advertisements and bring them in to me at the end of the year. The result was a surprise, and showed that more people were reading my "ad" than I thought.

BOWER & BARBER, DRUGGISTS.

Our Soda Fountain Is Open.

"All the world's a stage,
And men and women merely players;
They have their exits and their entrances,
And one man in his turn plays many parts,
His acts being seven ages."

"At first the infant," for whose benefit we constantly keep on hand Infant Powder, Puffs, Castoria, Paragoric, etc.

"And then the whining schoolboy," who wants Tablets, Pencils, Pens. We have them.

"And then the lover." Well, boys, we've been there. Come along, we know your wants and can supply them.

"Then a soldier." We keep a panacea for the "sea serpent" fever.

"Then the justice," whose busy life oft brings an aching head. Remember our Excelsior Headache Powders.

For the aged we have much that will relieve and rejuvenate.

"Last scene of all," * * * "Sans teeth, sans eyes, sans taste, sans everything." Yet we are the last and most faithful to minister to your wants.

Our Soda Fountain Is Open.

BOWER & BARBER,

3 E. Lake Street. Telephone, No. 31.

This year I have a new method. Instead of the illustrations I use a familiar quotation from some well-known author, join my advertisement to it, and again offer a present to each person who will bring in all my "ads" for the year and write the name of the author quoted on the ad. This is a winner. The school children have their teachers or parents

assist them. Older people of a literary turn of mind take pride in letting me know that they are keeping up with me; and, in fact, my "ads" in our local paper are eagerly looked for as soon as the paper reaches the subscribers. Why? Just because they are free from mold, dust and signs of laziness. Wake up, Brother Druggists, and change that stale old ad, or, for the sake of modern taste, cut it off. I inclose a sample, just to show you my style. The squib regarding the "sea serpent" is of local interest, but the ad. will suffice to give you the idea.

Yours truly,
R. T. BOWER, JR.

Petoskey, Mich., May 8, 1894.

LATEST FROM THE SEAT OF WAR.

Like one of the heroes of "Three Men in a Boat," who studied medicine alphabetically, beginning with diseases commencing with A and ending with Z, so the Senate of the United States, after a period of vocal activity extending over two months, seems to be floundering somewhere near the letter M. (to be exact in the matter of saying "where they are at" would entail too wearisome an investigation). With due apologies to our readers for mentioning a matter which everybody is tired of, we will say that the Senate Finance Committee has recommended the following rates on drugs and chemicals: Chloral hydrate, 25 cents per pound; ad valorem; chloroform, 25 cents per pound; coal tar colors or dyes, 25 cents per pound; collodion, 40 cents per pound; in sheets 50 cents per pound; in finished articles, 45 cents per pound; ad valorem; medicinal barks, berries, etc., 10 cents per pound; ad valorem; sulphuric ethers, 40 cents per pound; spirits nitrous ether, 25 cents per pound; fruit ethers, oils or essences, \$2 per pound; ethers not otherwise specified, \$1 per pound; dyewood extracts and decoctions, 10 cents per pound; ad valorem; gelatine glue, etc., 25 cents per pound; ad valorem; crude glycerine and refined glycerine, 1 and 3 cents per pound respectively; iodoform, \$1 per pound; extracts of licorice, 5 cents per pound; carbonate of magnesium, 3 cents per pound; calcined, 7 cents; Epsom salts, one-fifth of 1 cent; castor oil, 35 cents per gallon; cod liver oil, 20 cents per gallon; ad valorem; flaxseed and poppyseed oils, 20 cents per gallon; hemp and rape seed oil, 10 cents per gallon; peppermint oil, 25 cents per gallon; ad valorem; aqueous extract and tinctures of opium, 20 cents per gallon; ad valorem; opium prepared for smoking, \$5 per pound; crude opium, free; phosphorus, 15 cents per pound; chromate and bichromate of potash, 25 cents per gallon; ad valorem; hydrochlorate of potash, 25 cents per pound; refined saltpeter, 1-2 cent per pound; prussiate of potash, red or yellow, 25 cents per gallon. ad valorem. These rates are now being debated, and as the matter will have to be referred back to the House, those prophetic individuals who can usually tell what Congress is going to do are now keeping very quiet.

The Wood Glass Company has succeeded the Wood & Fox Company. The old firm was located at 511 Kirk Block, Syracuse, but Arthur S. Fox has withdrawn, and the other partner, Clarence W. Wood, has assumed all liabilities and is removing its office to 26 North Salina street.

What . . .

Congress

Has Done.

— WRITTEN BY —

GLAZEBROOK & Co.

Prescription
Druggists,

Seventh and Oak Streets,

TERRE HAUTE, - - - IND.

A JOKE ON CONGRESS.

Every once in a while some bright genius brings forth a piece of work which makes the world revolve a bit easier by supplying that great anti-friction element—a hearty laugh. The above is an instance of this kind, and is a fac simile of the front cover of a little book now going the rounds, which the strict partisan of the dominant party will regard with pleasurable anticipation, while his opponents will, at first glance, assume that it is a work containing spread-eagle statements, which it is their duty as party men to strenuously controvert. They will both be badly fooled, and will laugh and poke each other in the ribs when the true situation dawns upon them. A clear-store Indian would probably smile could he open the book and find that it contains—nothing—except a few blank pages. The victim of the joke, after trying it upon all his friends with gratifying success, preserves the unique little book, and uses it for a memorandum. Glazebrook & Co. are certainly to be congratulated upon their employment of this bright "hit," and as the back cover of the book is utilized to display a general advertisement of the firm's business, the idea is entitled to a prominent position in The Era's collection of effective advertising.

THE BEAUTY OF NIAGARA.

Can never be described, and it has never been pictured so adequately and satisfactorily as in the splendid portfolio just issued by the Michigan Central, "The Niagara Falls Route." It contains fifteen large plates from the very best instantaneous photographs, which cannot be bought for as many dollars. All these will be sent for 10 cents by Frank J. Bramhall, Advtg. Agent, Michigan Central, 402 Monadnock Block, Chicago.

TRADE NOTES.

The Buffalo College of Pharmacy offers special advantages to those who desire a practical pharmaceutical education by giving one-half of the instruction in laboratory work. Illustrated announcing men will be sent upon application to John H. Gray, Ph. G., secretary, 216 Seventh street, Buffalo, N. Y.

The letter "M" is probably as easy to write as any in the alphabet, and the drawing of a diamond to surround it is also an easy matter. This simple procedure, in connection with orders to your jobber, will bring you the high grade cork manufactured by the E. W. McCready Cork Co., 47 Illinois street, Chicago. Try it.

Menn & Stubenrauch, manufacturing pharmacists, New York, have given a good deal of attention to the manufacture of those fluid extracts intended for use in making syrups, and they invite the trade to give their specially prepared Will Cherry, Ginger Soluble, Tolu, Sarsaparilla Compound, Sweet Orange Peel, Ipecac, etc., a fair trial, as they are convinced that they will give the most careful dispenser perfect satisfaction.

Repeated chemical and clinical tests seem to fully justify the Oakland Chemical Co. in offering their O. C. Peroxide of Hydrogen as a compound devoid of irritating qualities, non-acid, stable at all temperatures, and possessing a definite antiseptic and germicidal action. The use of this important product in sanitary affairs is on the increase, and the manufacturers of "O. C." respectfully ask for a comparison of their brand with others upon the market.

French manufacturers are noted for the care which they use in selecting the best raw materials in the manufacture of perfumes, which accounts for the high favor with which Pinaud's goods are regarded by the lovers of fine odors. The druggist who is in doubt as to the prospect for selling high grade perfumes should send for samples to Ed Pinaud's importation office, 42 East 14th street, New York, and learn why it is that so many willingly pay good prices for goods of fine quality.

Attention is called to the advertisement on another page of Dr. Mason of Chatham, N. Y., who conducts a sanitarium at that place for the treatment of cancer, tumors and blood diseases. The doctor claims that his treatment is purely vegetable, no knife or plaster being used. His medicine is sold by many druggists and proves quite remunerative to the dealer. Druggists who will send him the names of patients will have the remedies furnished through their stores. Write for particulars as to prices, etc.

Among the things which the druggist may safely count upon is the demand for preparations for the face, hands, skin and complexion during the Summer season. The "Summer" girl will soon be inquiring for such things, and she is quite likely to want Hind's Honey and Almond Cream. If you are acquainted with the preparation note the invitation of the manufacturer, A. S. Hinds, Portland, Me., to send for his special offer. If you are not acquainted with it, send for free sample, and judge of its selling qualities.

The saving of time in the shipping department is an important item with any firm which does a large business. This saving often means a distinct advantage over slower competitors. Barlow Brothers of Grand Rapids, Mich., manufacture patent manifold shipping blanks with effect a decided economy in that direction, and every shipper who is on the lookout for improvements in his service should write for particulars to the manufacturers.

With twenty-five sizes and kinds of ice cream cabinets to choose from, there should be no difficulty in making a choice of an article which is now recognized as a necessity to the dealer who dispenses ice cream at his soda fountain. The E. T. Burrows Co., Portland, Me., show illustrations of several cabinets in their advertisement in this issue, but they have a handsome catalogue, giving full description of all their goods, which they send upon application. Write them about it and mention The Era.

A glance at the personnel of the faculty of the Philadelphia College of Pharmacy will convince the seeker after a pharmaceutical education that his studies will be guided by men who are among the foremost in their profession, and an investigation of the facilities which the college possesses for practical instruction will further convince him of the advantages to be gained by pursuing his studies at this old and reliable institution. Write for announcement to Thomas S. Wiegand, 145 North 10th street, Philadelphia.

If there is any one who should set the example and advertise the fact of his using pure water it is the retail druggist. He should furnish an object lesson for the public to imitate. If he dispenses soda water, he should apprise his customers of the fact that all the ingredients composing the beverage, including the water, are absolutely pure. One of the means for attaining this result are set forth in a circular which the McConnell Filter Company, Buffalo, N. Y., will send upon application. Send for it and investigate their germ-proof filter.

The peroxide of hydrogen, manufactured by Larkin & Scheffer, St. Louis, Mo., is claimed to be an "ideally perfect product," and in support of such claim they call attention to a series of comparative tests which have been made of the goods of several manufacturers. The "L. & S." product shows a strength of 11-12 volumes—permanenate test; requires but 3-1.2 cc. standard solution of ammonia to neutralize 1 litre, and shows no trace of earthy salts. When you want a product which conforms to the standard of the U. S. P. 1890, specify "Larkin & Scheffer."

There is nothing like being seasonable, and the Cudahy Pharmaceutical Company of South Omaha, Neb., will assist every druggist in being in season with a new preparation for soda fountain use, "Lime Juice and Pepsin," prominently displayed, will bring the crowd to your fountain. Cudahy's Wine and Beef Peptone is another "hot weather" seller which is going to become well acquainted with the retail drug store this Summer. See advertisement of the Cudahy Company in this issue, and send for samples and prices on these two preparations.

W. Baedigen & Sons Co. of Rochester, N. Y., have a specialty which is well worth the investigation of the drug trade. It seems a very simple one when it is known that it is in the line of paper boxes, but there is a great difference in boxes—that is, between common ones and fine ones. This firm makes the latter kind, and solicit correspondence from those who really want fine goods.

If you are looking for any of the leading French and English pharmaceutical specialties you will probably find them by inspecting the list handled by E. Fougera & Co., 26 to 30 North William street, New York. They handle a very extensive line of such preparations, and will be pleased to answer any inquiries which the trade may make regarding them, and furnish advertising matter descriptive of any particular preparation in which you may be interested.

As the selling price of nearly everything is now regulated by competition, the only avenue to wealth seems to be the one in which economy of manufacture can be successfully practiced. The only profit lies in lowering the cost of production. The Merz Capsule Co. of Detroit, have something right in this line for the retail druggist. By using their empty elastic capsules they claim that a saving of 50 to 100 per cent. can be effected. Old method prices can still be obtained, but cost of production can be cut in two. Better investigate this.

Duroy & Haines of Sandusky, Ohio, show in their advertisement on page 32 an illustration of the extensive wine cellars and plant where the genuine Duroy wines are made. They ask the trade to see that all wines purporting to be "Duroy" are shipped from Sandusky, Ohio. The only parties authorized to sell these wines are Morrison, Plummer & Co. of Chicago, and the force of seven travelers employed by the manufacturers. Send for samples, which will be sent by express free of charge, and compare them with any and all wines sold.

Attention is directed to the advertisement of J. C. Kenyon, Owego, N. Y., in this issue of The Era, in which he makes a special offer to introduce his Golden Tobacco Habit Cure to the retail drug trade. The preparation retails for 25 cents, and on orders for three dozen at \$1.50 per dozen, one dozen will be given free, the transaction giving a net return of \$7.50. The goods are put up in easel boxes for counter display, and are quite attractive.

The suit of Dr. Amick against the St. Louis Clinique and Faculty of the College of Physicians and Surgeons, of St. Louis has been decided in favor of the plaintiff.—*Am. Med. Journal.*

The dissemination of diseases is a subject about which there has always been, and still is, much obscurity, but scientists and physicians are becoming more and more agreed upon the probability that impure drinking water is an important factor. An excellent means of combating this possibility is furnished in the water distilling apparatus manufactured by the James Curran Mfg. Co., 313 West 36th st., New York. By its use druggists, physicians and families can supply themselves with pure water, and be sure that they are getting a healthful article. Send for descriptive pamphlet.

"Compound Extract Beef, Sarsaparilla and Celery" sounds like a winning name, does it not? Preparations of beef, sarsaparilla and celery are very popular with the public, and when a druggist has a call for any of them he can supply the demand with the above mentioned preparation. It is put up by French, Cave & Co., Philadelphia, with buyer's address, and the retailer can make money by retailing it at either 50 cents or \$1 per bottle. It is just the thing to fight cut rates. Send your label for specimen wrappers, and note prices on the preparation in an advertisement in this issue.

Now that the soda-water season is fairly open, the enterprising dealer will also pay some attention to those goods which share popularity with Summer beverages. Among these is fine confectionery, and the latter is a synonym for Pomona Fruit Juice Tablets, manufactured by Duquette & Co., Council Bluffs, Iowa. These goods are put up in elegant shape, packed in four-pound, net-weight, square, flint-glass bottles, with large mouth and ground glass stoppers. The goods attract customers. Write for prices on case lots, assorted flavors.

It will be of interest to the drug trade to know that H. B. St. Clair, so well known as the representative of Beach & Clawridge and the I. Calvin Shafer Co., has branched out into business for himself in a line of specialties in fine package candies, gotten up especially for fine trade. His packages are decided novelties, and their attractiveness and fine quality will assure their sale. These are just the goods your customers will want. Write H. B. St. Clair, 78-80 Cortlandt street, New York, for prices, and be sure to ask about "Royal Butter Scotch," retailing in five-cent packages.

The possibilities in the way of colors at the command of the Low Art Tile Company, 92 Broadway, Chelsea, Mass., are so great in the construction of their soda water apparatus that the druggist who is at all artistic can, by taking advantage of the opportunities offered, fit up his place of business with an apparatus which will be in harmony with the finest schemes for general interior decoration. The expense for such a result is no greater than that involved in purchase of any other good apparatus, and as a means of pleasing customers the Low fountains are hard to excel.

The Rosshardt & Wilson Company, Philadelphia, manufacture a very fine line of petroleum products especially suited to the needs of the retail drug trade. Their line of manufacture includes "Lucilline," a pure petroleum jelly, put up in handsomely decorated tin cans; glycoline, petrolatum oil, sewing machine, mineral, castor and fine lubricating oils. These goods are handled by all the leading jobbers of the United States, Canada and England, and those of the trade who desire a fine line of such goods will be furnished full information upon application to the manufacturers.

Shafer's Standard Fruit Juices have three points in the way of economy to recommend them. First is the quality. They are warranted pure and to retain their original flavor and color in any climate. Second, the convenience attending their use, as they need no boiling with sugar, but simply admixture with syrup in a cold state in the proportion of one part of juice to seven or ten parts of syrup, according to fullness of flavor desired. Third, their prices, \$9 per case of one dozen quart champagne bottles, or \$3 per gallon in bulk. They also put up the juices in 5 and 10 gallon kegs, half barrels and barrels, as desired. All jobbers sell them.

The possibilities which surround the future employment of aluminum in the mechanical arts are almost unlimited, and many are the suggestions for its application. Perhaps one of the most unique uses which has been brought to the notice of the public is that of a comb made of the "metal of the future." The idea strikes the public at once, and there is no trouble in selling them, as they never break or tarnish and are nearly as light as the ordinary rubber comb. Write to the sole agents, William L. Strauss & Co., 27 Warren street, New York, for prices and particulars, mentioning *The Era*.

Nearly all druggists handle the same goods, but, in spite of this fact, there is a great difference in stores, and in the volume of business done by them. One of the great secrets for doing a good Summer business is keeping a store cool, so that it is a pleasure for customers to do their trading and be comfortable at the same time. Such a store soon becomes popular with the masses. The druggist who reads the advertisement of D. H. Bates & Bro., Dayton, Ohio, in this issue will discover a means of drawing trade by making his patrons comfortable. Write for particulars regarding Bates' electric ceiling fans.

The Hart Manufacturing Company has just placed in the drug store of L. Ambrecht, corner of West Lake and Lincoln streets, Chicago, one of their new Mexican onyx tilting can soda water apparatus, Hoff's patent. The apparatus is the talk of the town, and is pronounced by many the finest soda fountain in the city. The advantages of the new apparatus are that the cans are arranged so as to come in direct contact with the ice, and can be tilted forward to be filled with syrups without opening the cover of the ice chamber. The factory is running full time in order to supply the demand.

Have you seen the Boston Petty Ledger manufactured by A. G. Moore, 47-49 Court street, Boston, Mass.? They have sold over 25,000 of them, but if you are not one of the purchasers of a portion of this large number, sample pages and descriptive circular will be sent you upon application. See advertisement in this issue.

Plummer & Ward of Chicago are putting upon the market "Breath of Roses." This is in tablet form, put up in small oval screw-cap bottles, convenient to carry in the pocket, and retails at 15 cents per bottle. The trade price is \$1 per dozen, and this seems to afford quite a satisfactory profit to dealers, judging from their willingness to handle the goods. Unlike other remedies for offensive breath, they are swallowed like any medicated tablet, instead of dissolving in the mouth. They correct disorders of the stomach, and are said to be positively harmless in their nature.

Last season was a great one for Bromo-Seltzer. The extensive advertising which was done for it at the World's Fair has made it known all over the country, and the retail drug trade can look forward with considerable certainty to the demand which the Summer months will bring. The offer of the Emerson Drug Co., Baltimore, Md., on this preparation is still open. On all orders for Bromo-Seltzer amounting to \$20 the retailer receives one pound free and a discount of 10 per cent. Attractive advertising, including popular selections of sheet music and memorandum books, is furnished free. Write for particulars, and mention *the Era*.

Whitall, Tatum & Co. have recently brought out an article which the retail drug trade can handle with advantage and profit. It is the Acme Water Cooler, and the above illustration shows what it looks like. It consists of a glass jar, capacity one quart, inclosed within a double-walled can, so constructed as to be a non-conductor of heat. Ice placed in the jar will remain unmelting for many hours, and water can be kept perfectly cool all night. Owing to its non-conducting quality the can is also well adapted for retaining the heat of broth, gruel or other food placed in the jar when hot. The can is lined with zinc, the outside is handsomely japanned, and it is furnished with a folding handle, so that liquid may be readily poured out without removing the jar from the can. These coolers are especially valuable for sick-room use, and druggists can sell lots of them the coming Summer if they will take the trouble to call their customers' attention to them. Price \$15 per dozen, with discount to the trade of 50 per cent.

Many persons who are using Wilson's Common Sense Ear Drums have spoken favorably of them as a means of relieving deafness, and druggists are finding them a profitable article to keep in stock. Write for descriptive pamphlet to the Wilson Ear Drum Co., Louisville, Ky.

Many druggists can remember the thriving business they did with hot water bottles last Winter, and will naturally think the season for pushing such goods is past. This is not the case, however, with the Penniston Food Warmer, manufactured by the Davol Rubber Co., Providence, R. I. This article is a combined hot water bag and food warmer, but it can be used in a similar manner during the Summer by filling it with salted ice-water, thus keeping food cool and sweet for a long time. Write for prices on this and mention The Era. You can sell hot water bottles this Summer if you get the right kind and tell people how to use them.

The J. S. Carroll Manufacturing Company, 93 Locust st., Philadelphia, Pa., are sending out to the trade a very neat and attractive catalogue of soda water apparatus. This new firm admit that they are not the oldest makers of soda fountains, but the latest and newest and claim that the construction of their fountains embraces all the points of the latter character. Among the points to which they call attention are their new system for removing coolers, silver-plate lids for wall apparatus, and improved draught arms. This firm also have some prices which will interest those who are figuring upon a change or a new soda fountain. Write for catalogue and mention The Era.

Medicated chewing gums are becoming very popular with the public—and why shouldn't they? They certainly furnish a delightful means of taking medicine, and deserve to be popular. The J. Hungerford Smith Co., of Rochester, N. Y., put up gums of this sort—one for indigestion and dyspepsia and the other for coughs, colds and hoarseness. For a limited time these gums will be packed in a patented, automatic, alarm box for counter display. This serves as a means of attracting attention to the goods, and one trial usually insures a continued demand. Write for prices on these goods. It will not take long for your customers to become interested in medicated chewing gums, if you give them a chance.

James W. Tufts, 33 Bowker street, Boston, argues that if it pays to exchange an old soda fountain for a new one (and nearly every one admits that it does) the time for such an exchange is when business is inclined to be a little dull and trade in soda water needs just the kind of stimulation which a new and attractive apparatus can give. The plea that a druggist cannot go to the expense of making a change when business is dull is met by Mr. Tufts' announcement that his prices have been reduced to fit hard times. At any rate, write him for prices, a free sample of his raspberry juice, his new syrup book and a copy of "How to Make a Soda Fountain Pay."

If you will let Tilden & Co., manufacturing pharmacists, New Lebanon, N. Y., know that you are interested in their products, they will soon show their interest in your success by interesting the physicians in their goods which they sell through the retail pharmacist. They have an extensive line of literature relating to their preparations and business methods, and if you will send them your name they will be pleased to keep you supplied.

People now go to drug stores for a great variety of articles, and there is no reason why they should not go to the same place for many of the attractive and novel articles which Woods, Sherwood & Co. of Lowell, Mass., put upon the market. Write for this firm's catalogue and see how many readily salable articles they make which can be appropriately and profitably handled by the drug trade.

Have you a complete line of the Lanoline Toilet Specialties? On account of the favorable position which Lanoline occupies in the favor of the medical profession, toilet preparations in which this valuable agent is incorporated are of the kind which the druggist can conscientiously recommend. Lanoline Cream or Salve and Lanoline Cold Cream are both emollient, bland and soothing, the former being an excellent preparation for sunburn, tan, and for use "after shaving." Lanoline Soap, being made from a natural skin fat, is an especial favorite with the dermatologist. Lanoline Pomade is said to be one of the best of applications for the hair, and is an excellent remedy for dandruff. Write for descriptive circular and prices to Schulze-Berge & Kaechl, 79 Murray street, New York.

The Crown Perfumery Co., 17 New Bond street, and 112 and 114 Fore street, London, England, announce that their business, which was interrupted by fire, has been completely re-established, and that they are now erecting a large factory in London, which will answer all the requirements of their growing business. They also state that changes have been made in the management of their American branch, and that all orders and correspondence should in the future, in every case, be addressed to the depot of importation of the Crown Perfumery Co., 25 Elm street, New Haven, Conn. A full line of samples, including the pyramids and showcases, will be on view at their New York office, 190 Fifth avenue.

The many friends of Mr. G. S. Woolman, so many years engaged in the scientific instrument business at 116 Fulton street, New York, will be interested to learn of a very important change in his affairs. The firm of Queen & Co. of Philadelphia, with whom he was connected earlier in life, having found it necessary, owing to the great volume of their business in the vicinity of New York, to establish a branch there, have purchased Mr. Woolman's entire business and have secured his services as their New York manager. Mr. O. T. Louis, formerly in charge of resistance standardization in Queen & Co.'s laboratory at Ardmore has been detached from the Philadelphia staff of the electrical department and stationed at the New York office.

It is said that the basket in which the freedom of the city of London was presented to Jenner in 1803 was recently purchased at a pawnbroker's sale of unredeemed pledges in that city.

"Silent Salesman" has been found so appropriate for the clear case manufactured by John Phillips & Co., Detroit, Mich., that the firm has had the name trade-marked. The illustration on page 33 shows what it looks like. The case is fitted with molisters in the bottom, also in shelf in centre. The top part is used for opened goods, while the bottom is utilized as a storage cabinet. The case is made in various kinds of wood (oak being the prevailing style), and the glass is double-thick French sheet or polished plate. The lower doors slide horizontally and the upper doors drop on spring hinges, which are set four inches above the shelf, so as not to interfere with the box lids. When desired, beveled plate glass, flush with molding, is furnished for top of case. Write for prices and mention The Era.

Lehn & Fink have added a new flavor to their line of "Concentrated Fruit Juices:" Wild Cherry Juice, designed especially for dispensing "Cherry Phosphate" at the soda fountain.

Directions: Mix, col. 1 part Wild Cherry Juice, 8 parts simple (or rock candy) syrup, and 1 part acid phosphate; dispense a liberal amount with soda water, and the result will be a delicious "special flavor" beverage.

A judicious addition of "L. & F. Soda Foam" to the syrup made with any fruit juice will greatly enhance the flavor and appearance of the dispensed beverages.

Lehn & Fink's Dutch Cocoa has been in the market several years, and without advertising has found favor and increasing large sales. It is powdered and soluble; for use in syrup at the soda fountain, and likewise for home use as a breakfast cocoa. It is an absolutely pure powdered cocoa, free from cocoa butter, and containing no sugar, flour, starch or other foreign ingredients. Manufactured especially for and imported from Holland solely by Lehn & Fink. One teaspoonful will make a delicious cup of chocolate; one-half pound will make a gallon of soda-water syrup, yielding an unsurpassably rich and delicious beverage with soda water. Put up in five-pound cans at 50 cents per pound. No matter what sort of cocoa or chocolate you have been using heretofore try a can of L. & F. Dutch Cocoa. Satisfaction guaranteed. And you will introduce it in your household, too, without fail.

IN A THOUSAND DIFFERENT WAYS.

The druggist will find the adjustable type printing outfit offered by Wm. H. Dietz, 117 Dearborn street, Chicago, a great help for advertising and printing purposes. A druggist often wants a rubber stamp for immediate use for filling in blanks, printing odd prescription labels, stamping price tickets, etc. As a special offer, Mr. Dietz includes a dating stamp, with abbreviated words, good for six years. A memorandum stamped with the date in colored ink is a great aid in tracing back orders, and besides the system is valuable. See advertisement on page 13.

A customer of the Springer Torsion Balance Company writes them from Central Falls, R. I., as follows: "I bought one of your prescription scales (style 269) recently, and am very much pleased with the same. It is a pleasure to use such scales, and it seems to me a few remarks may not be amiss. The drug journals and druggists give too little time to a matter that needs the most careful attention. I mean the matter of scales. Being a practical and observant druggist, I have often wondered why so many druggists persisted in the use of scales that were not sufficiently accurate or fine to weigh minute quantities of drugs. The majority appear to have forgotten that exactness is essential to success in our line, consequently they have selected poor scales, so that when called upon to weigh small quantities they are placed in a queer position. They have either to trust to luck as to accuracy, thereby running the risk of poisoning, or to give themselves the benefit of the doubt, and weigh short, thus deceiving the doctor who prescribed. Either alternative is pernicious. If too much is given and death results the druggist's reputation is gone. If too little is given, the intended effect is not produced, the patient may die, and the doctor lose part of his reputation. For instance, a doctor attending a person suffering from overindulgence in alcohol thinks that a certain amount of strychnine is necessary to sustain his patient. He prescribes accordingly. The prescription is brought to the owner of the poor scales. Unable to weigh exactly, the druggist, anxious to be on the safe side, favors himself by weighing short. The result is that the amount intended is not given, the doctor is deceived, the patient receives not enough to sustain him and dies. Who is to blame? Not the doctor, but the druggist who owns the poor scales."

JUST THE THING FOR THE SUMMER TRADE

All question as to the probable success of a British invasion has been settled at last. A landing has already been effected and the invading forces, moving under banners inscribed "Kops Cheer" and "Kops Extra," are having an easy time of it occupying our country, which, strange to say, is displaying no hostility whatever. Kops Cheer and Extra are the ideal temperance drinks of the day, and they have a record across the pond of over 5,500,000 bottles sold in London in four months. Both are absolutely non-intoxicating, the first named closely resembling Bass' ale, and the latter would puzzle a Dutch judge to distinguish it from porter or stout. These beverages are made with pure Pulham (England) artesian well water, to which is added the finest and most wholesome ingredients, including the best hops, thus producing drinks which are excellent thirst quenchers, appetizers, nerve tonics and remedies for indigestion. These goods can be sold anywhere without license. The drug trade can work up a profitable trade with them, unless it waits until other lines of business take the initiative. Write for further information, terms, etc., to the Depot and Bottling Stores for United States of the Kops Company, 406 West 53d street, New York, and mention the Era.

There is certainly a chance to save money by buying oil of tar at the prices quoted by Hansen & Smith, Wilmington, N. C., in their advertisement in this issue. They put it up especially for the drug trade in iron-hopped barrels, and will be pleased to correspond with druggists who desire anything in the way of superior pine tar products.

The eleventh edition of Gray's Pharmaceutical Quiz Compend, published by Gray & Bryan, Chicago, has just been issued. The work has been considerably enlarged, and its revision has put it upon the basis of the U. S. P., 1890. Students in search of a quiz compend will find Gray's a valuable and up-to-date publication. Price, \$1.50.

Dr. H. L. Bowker & Co., 295 and 297 Franklin st., Boston, publish a large catalogue devoted to the firm's famous soda water extracts, beers, ginger ale and fruit flavors. They want every druggist who has a soda fountain to have a copy, and become acquainted with this firm's products and their methods of doing business. Send for a copy.

The William S. Merrell Chemical Co. of Cincinnati, O., believe in bringing their preparations to the notice of the medical profession through the pharmacist, and they offer attractive inducements to the enterprising druggist who will co-operate with them in bringing about this result. Write them for particulars and supply of their printed matter.

The prevalent reports upon the adulteration of olive oil make the guarantee upon "Lautier's," referred to in the advertisement of Geo. Luenders & Co., 218 Pearl street, New York, quite interesting to the drug trade. The statement that no one has ever seen Lautier's oil rancid, no matter whether four years old or left open for a long time, is certainly a strong recommendation in favor of this brand.

Medicinal and commercial carbolic acid are specialties with the firm of Charles Lowe & Co. of Manchester, England, and they are prepared to furnish at all times, through their American wholesale agents, Schoellkopf, Hartford & MacLagan, or Merck & Co., of New York, any required quantity at the lowest possible prices. Write to the above named agents for quotations.

Most of the pharmaceutical colleges begin their terms in the Fall of the year, but the coming Summer will be the proper time for the student to make up his mind which school to attend. The catalogue of the Illinois College of Pharmacy will give much valuable information on this point, and will be sent to any one applying to Oscar Oldberg, Dean, 2121 Dearborn street, Chicago.

Write to the Star and Crescent Mills Co., Philadelphia, for figures on their bath outfits. These consist of several requisites, such as robe, slippers, mitts, etc., put up in a neat box, and are just the thing to attract the attention of the better class of customers. You already sell soaps, toilet waters, sea salt, bath brushes, etc., and why not sell everything for bathing purposes except the water?

MICHIGAN UNIVERSITY NOTES.

Caps and gowns have made their appearance on the campus, and the honor belongs to the senior Lits. The professional students, in spite of their demonstrations to the contrary, cannot refrain from casting admiring glances at them.

The Journal Club, which was organized at the beginning of this semester under the direction of Prof. P. C. Freer, is presenting some interesting papers, among them "The Synthetic Methods for Preparing Citric, Tri-carballic and Aconitic Acids," by Miss N. F. Goldthwaite; "The Preparation and Structure of Thio-sulphuric Acid," by R. R. Putnam, and a "Digest of Moissan's Work on Fluorine and Fluorides in General," by Richard Fischer. The Journal Club is composed chiefly of professors, instructors in chemistry and graduate students, but no one is excluded from the meetings. They meet on Thursday night of each week. One complete paper is presented at each meeting, followed by a general discussion.

Goodyear & Co. recently exhibited an interesting show window. For a centrepiece was a skull and crossbones, and around this was arranged a handsome display of poisons. Besides the usual poisons, morphine, strychnine, arsenic, etc., tobacco, cigars and cigarettes, pipes, whiskies and playing cards were included.

The junior pharmacy students are busily at work on their third and last set of pharmaceutical preparations. This set comprises some of the more difficult operations in practical pharmacy, requiring patience, perseverance, skill and, above all, accuracy in manipulation to insure good results. Among the preparations receiving their attention at present are ethylnitrite, monobromated camphor and phosphoric acid, the object being to give them practice in handling corrosive and inflammable substances. The students are required to make all their preparations conform with the U. S. P. strength and tests of purity before submitting them to the final inspection.

The seniors are receiving special drill daily under the personal supervision of Prof. A. B. Stevens in compounding prescriptions. These prescriptions are difficult ones chosen from a large collection of actual physicians' prescriptions, and are selected with special reference toward exercising their knowledge of materia medica, compatibility and posology, and to give them practice in compounding so as to produce the most elegant appearing preparation. All the material used in dispensing which can be manufactured advantageously on a small scale is made by the senior and junior students. A number of the juniors every year donate their preparations to the dispensing department.

As a tonic beverage Malto occupies a preferred position in the estimation of the patrons of the soda fountain. This is its record in the past, and it is being pushed by the manufacturers more than ever for the coming season. It is furnished in the form of a syrup, and is also carbonated. Send for samples of the beautiful advertising matter which the Malto Manufacturing Company of Cleveland, Ohio, is sending out to boom Malto.

THE SOUTH.

Frank C. Garner, Gainesville, Tex., has made an assignment.

Andrew Van Antwerp has opened a new store at Mobile, Ala.

R. E. Harris of San Antonio, Tex., has opened a store in Topeka, Kan.

D. C. Curtis, the Decatur street druggist, Atlanta, was married recently.

Cunningham & Gatchell are successors to Cunningham & Blakely, Selma, Ala.

Weimar, Klein & Co. have purchased the Avenue Drug Store, Hot Springs, Ark. Volgt Brothers, Chattanooga, Tenn., are adding a nice laboratory to their store.

Wilson & Stern, doing a druggists' sundries business in New Orleans, have failed.

The Weimar Drug Co. of Russellville, Ark., have filed articles of incorporation, the capital stock to be \$100,000.

John L. Day, Gadsden, Ala., has retired from the drug business and gone on a stock farm near Selma, Ala.

W. P. Smith, Atlanta, has purchased the stock and fixtures of W. W. Webbs, and will continue the business at the old stand.

J. C. Price, Galveston, Tex., has purchased the stock of Clark's pharmacy, Yoakum, Tex., and will remove it to Galveston.

Sol. Cronhelm, Atlanta, attended the meeting of the Grand Lodge, Knights of Pythias at Columbus, Ga., as a delegate from his lodge.

Ben. Clarke, formerly in the employ of H. J. Lamar & Sons, Macon, Ga., has accepted the position of manager of Jacob's pharmacy branch drug store, Atlanta.

W. A. Graham has filed suit for \$5,000 damages against the Lamar-Tankin Drug Co., Atlanta, for violation of contract in dividing proceeds from the sale of Graham's Specific.

American proprietary preparations are enjoying a great sale in India. Several of our most important firms have established agencies in Calcutta and Bombay, among which is Mellin's Food Company for India.

Is your shelfware becoming rather shabby from a want of attractive labels? If it is, your attention is directed to the advertisement in this issue of Dr. R. R. Lansing, Detroit, Mich., who will furnish you his patent glassine labels, to match anything you have in the way of glass labels. Send for samples and catalogue, mentioning The Era.

Charles R. Doane, 22 Meserole street, Brooklyn, N. Y., makes self-litiz powders by machinery, and as a result of the employment of such means is enabled to guarantee the accuracy of the goods he puts upon the market. It also enables him to make extremely favorable prices. Samples of his powders will be cheerfully furnished upon application.

In commenting upon the loud tones and intricate designs of the wall papers of the season, an authority upon such subjects says: "A plain wall, with a good top frieze, forming a strong note of color, makes a strong room and gives opportunities for hanging etchings, plaster casts, sketches, etc." This is evidently a plea for a return to plain walls, hung with cartridge papers, etc.

PATENTS, TRADE-MARKS AND DESIGNS.

From U. S. Patent Office Gazette.

PATENTS.

- 519,220 Luminous Paint.—Carl Kraut, Washington, D. C.
- 519,386—Process of Manufacturing Pyroxylin Solvents and Their Products.—Gustave Zeller, Rahway, N. J.
- 519,387—Process of Manufacturing Pyroxylin Solvents and Their Products.—Gustave Zeller, Rahway, N. J.
- 519,388—Process of Manufacturing Pyroxylin Solvents and Their Products.—Gustave Zeller, Rahway, N. J.
- 519,428—Process of Purifying Ammonia.—Ernest Solvay, Brussels, Belgium, assignor to the Solvay Process Co., Syracuse, N. Y.
- 519,429—Apparatus for Causticizing Ammonia Liqueur.—Ernest Solvay, Brussels, Belgium, assignor to the Solvay Process Co., Syracuse, N. Y.
- 519,442—Thermometer.—Michael Byrne, New York, N. Y.
- 519,445—Process of Making Chlorine.—William Donald, Saltcoats, Scotland.
- 519,446—Process of Making Chlorine.—William Donald, Saltcoats, Scotland.
- 519,458—Blue Dye.—Karl Krekeler and Paul Kraus, Elberfeld, Germany, assignors to the Farbenfabriken Vormals, Fr. Bayer & Co., same place.
- 519,513—Apparatus for Distributing Carbonic Acid.—Emil Reuff, New York, N. Y.
- 519,514—Apparatus for Charging Liquids with Gas.—Emil Reuff, New York, N. Y.
- 519,710—Method of and Apparatus for Electrochemical Decomposition.—Henry Carmichael, Malden, Mass.
- 519,989—Petroleum Sulfo-Acid.—Hans A. Fresch, Cleveland, Ohio.
- 519,990—Petroleum Sulfo-Acid.—Hans A. Fresch, Cleveland, Ohio.
- 519,991—Brown Petroleum Nitro-Dye.—Hans A. Fresch, Cleveland, Ohio.
- 519,992—Petroleum Dye.—Hans A. Fresch, Cleveland, Ohio.
- 519,014—Syringe.—Gustav Beck, Berne, Switzerland.
- 519,006—Brown Petroleum Dye.—Hans A. Fresch, Cleveland, Ohio.
- 519,057—Distilling Apparatus.—Alphonse Lavy, Paris, France.
- 519,130—Apparatus for Charging Liquids with Carbonic Acid.—Jacob F. Theurer, Milwaukee, Wis.
- 519,229—Blue Alizarin Dye.—Rene Mannheim Bohn, Ludwigshafen-on-the-Rhine.
- 519,433—Soda Fountain.—Thomas Riley, Boston, Mass.
- 519,434—Soda Fountain.—Thomas Riley, Boston, Mass.
- 519,522—Polyazo Yellow Dye.—Johann J. Brack, Basle, Switzerland.
- 519,523—Polyazo Yellowish Dye.—Johann J. Brack, Basle, Switzerland.
- 519,627—Apparatus for Making Oxygen.—Ferdinand Fanta, London, England.

Patents Expired May 1st.

- 190,122—Composition Paravasselline Paste.—B. L. Budd, Fairfield, Ct.
- 190,125—Composition Emery Paste.—B. L. Budd, Fairfield, Ct.
- 190,126—Composition Rouge Paste.—B. L. Budd, Fairfield, Ct.

Patents Expired July 8th.

- 190,395—Soda Water Apparatus.—Fred W. Wiesebrock, Brooklyn, N. Y.
- 190,396—Automatic Carbonic Acid Gas Generators.—F. W. Wiesebrock, Brooklyn, N. Y.
- 190,533—Devices for Preventing the Accumulation of Frost and Steam upon Store Windows.—Charles S. Anthony and J. Manheim, Taunton, Mass.
- 190,564—Machines for Putting up Self-litiz Powders.—Charles R. Doane, Brooklyn, N. Y.

TRADE MARKS.

- 24,520—Mineral Waters.—Gerolsteiner Sprudel W. Castendyck, Gerolstein, Germany. The representation of a heraldic lion upon a star.
- 24,531—Natural Mineral Water.—Waukesha Lithia Spring Co., Chicago, Ill. The representation of a pneumatic-cylindrical life-preserver, with the symbols "L2 O" upon it.
- 24,535—Medicinal Wines.—F. Comar et Fils & Co, Paris, France. The words "Vin Nourry" and the fac-simile signature "J. Nourry."
- 24,537—Linctent.—Wm. C. Johnson, Eau Claire, Wis. The word "Volco."
- 24,538—Egg Water.—Ann E. Brady, New York. The words "Diamond Water" in connection with the representation of an eye.
- 24,539—Line of Proprietary Preparations.—Foley & Co., Chicago. The words "A Friend of the Family."
- 24,540—Fluid Medicine to Neutralize the Effect of Microbes on the Physical System. Goodman & Macatee, New York. The words "Macatee's Microbicide" in two parallel lines, one letter "M" serving as the initial letter of both words.
- 24,541—Shampoo for the Hair.—James Whitney Barnum, Louisville, Ky. The word "Shamponia."
- 24,542—Toilet Soap.—The J. B. Williams Co., Glastonbury, Conn. The representation of a cow's head.
- 24,545—Flavoring and Perfuming Extracts.—Charles S. Netter, New York. The words "Love's Extracts."
- 24,546—Insect Powders.—Adolph Thurmayr, Stuttgart, Germany. The word "Thurmeline."
- 24,587—Toilet Soap and Lotions.—Charles Emory Cornell, New York, N. Y. The representation of an ear of corn.
- 24,588—Face Powder.—Henry Tetlow, Philadelphia, Pa.—The words "Blanc Illusion."
- 24,589—Preparation for Beautifying the Complexion.—Wm. A. Hance, Springfield, Ohio. The words "Diamond Dew."
- 24,590—Balm or Cosmetic.—Lyon Manufacturing Co., Brooklyn, N. Y. The words "Hagan's Magnolia Balm."
- 24,591—Preparation for the Hair.—Lyon Manufacturing Co., Brooklyn, N. Y. The words "Lyon's Kathalron for the Hair."
- 24,592—Liniment.—Lyon Manufacturing Co., Brooklyn, N. Y. The words "Mexican Mustang Liniment."
- 24,593—Extract of Sarsaparilla, Cough Cure, Pills, Salve and Worm Tablets.—Charles E. McIntosh, Calais, Me. The words "Dr. Thomson's" and his portrait.
- 24,594—Remedies for Throat and Lung Diseases.—Gilpin, Langdon & Co., Baltimore, Md. The word "Kreol."

BOOKS.

***BRIEFER COURSE, ELEMENTS OF CHEMISTRY.**—As its title implies, this work is a brief course in chemistry, following in general the plan of the more pretentious work, "Shepard's Elements of Chemistry," by the same author. It has been the author's intention to furnish a comprehensive work in which the experiments and laboratory work are so simplified and arranged as to come within the time usually available in schools where but part of the year is allotted to the study of chemistry. The work will be appreciated by those whose time is limited to a consideration of the main facts of a science which has no limits, and the careful selection of experimental illustrations will be of great aid to the student in making application of these facts.

***THE DISEASES OF THE WILL.**—Those who have read with interest the works of Ribot upon the diseases of personality and the psychology of attention will find this interest revived with the announcement of another work by the same author bearing the above title. The author has attempted the exposition of a certain branch of psychology by a method which is directly opposite to the evolutionary idea which has heretofore dominated such investigations, and instead has approached the subject from a different direction by carefully studying the anomalies of these psychological attributes of the human race. The work is divided into five chapters, and its character may be judged by the following titles of the same, viz.: (1) "Impairments of the Will—Defect of Impulse;" (2) "Impairments of the Will—Excess of Impulse;" (3) "Impairments of Voluntary Attention;" (4) "The Realm of Caprices;" (5) "The Extinction of the Will."

***FORMULAIRE DES MEDICAMENTS NOUVEAUX ET DES MEDICATIONS NOUVELLES, POUR 1894.**—As its title indicates, this little work is designed to keep the French pharmacist and physician posted upon the new remedies which are being introduced so constantly, and the fifth edition which is now before us contains a large number of brief, condensed descriptions of the newer synthetic remedies, as well as references to many of our common plants, which are evidently just beginning to be recognized by the French medical profession. While occupying but little space, the descriptions are quite comprehensive, embracing in the case of plants the description, physiological and therapeutical properties and

***Briefer Course, Elements of Chemistry,** by James H. Shepard, Professor of Chemistry, South Dakota Agricultural College and Chemist to the U. S. Experiment Station, South Dakota. Cloth, 240 pages. Boston: D. C. Heath & Co.

***The Diseases of the Will,** by Th. Ribot, Professor of Comparative and Experimental Psychology, College de France. Translated by Merwin-Marie Snell. Cloth, 134 pages. Chicago: The Open Court Publishing Co. Price, 75 cents.

***Formulaire des Medicaments Nouveaux et des Medications Nouvelles, Pour 1894.** By H. Boissillon-Limousin. Introduction by Henri Huchard. fifth edition. Paris: J. B. Bailliere et Fils, 9 Rue Hautefeuille. Cloth, 16mo, 314 pages.

method of employment and dose. Directions for the preparation of many of the synthetic remedies are also given. Quite a little space is given to the methods employed in the manufacture of extracts of animal origin, such as cardine, "liquid cerebral," and those from the pancreas, thyroid glands, etc.

***A MANUAL OF MICROCHEMICAL ANALYSIS.**—Processes which have been devised of late years called "Microchemical Methods," by which minute particles of the rock-forming minerals may be subjected to a more or less complete chemical analysis, have developed into such magnitude and importance that the desire for a work devoted especially to such methods has long been felt by those students of chemistry whose inclinations led them in the direction of petrographical research. It is doing no violence to a trite saying in asserting that this book supplies a long-felt want, as the ground seems to be completely covered, and the advantages as well as the disadvantages of the various methods are referred to in a quite candid manner. Although microchemical analysis has its most direct bearing within the domain of geological research, yet Professor Judd, in the introduction to the work, says: "It is evident that, like blowpipe assaying, the methods described in this work may be often employed with advantage in the ordinary chemical laboratory, either for rapid testing or in confirmation of the results obtained by other processes. Archaeologists and metallurgists, too, will often find the methods for examining the alloys of great service, especially in cases like those of manufactured articles or objects of art, in which only very minute quantities of the material are available for analysis."

THE STATE BOARD OF HEALTH OF MASSACHUSETTS has prepared a very valuable manual for the use of the various local boards of that State. The book contains the statutes relating to public health, the medical examiner laws, the laws relating to the registration of vital statistics and the decisions of the Supreme Court of Massachusetts relating to the same. The work has been carefully compiled, and contains much information of value to those interested in public health and sanitation.

PAMPHLETS RECEIVED.—The works of Justine Siegemundin, the midwife; *The Limitations of the Use of Pessary*; abstract of two articles treating of progress in midwifery; a case of double vagina, with operations—all being reprints of articles in the Johns Hopkins Hospital Bulletin and Maryland Medical Journal, by Hunter Robb, M. D., associate in gynecology.

The Block Drug Company of Chattanooga, Tenn., has been succeeded by M. Block & Co., Mr. Leo Block having transferred his stock to the latter concern.

***A Manual of Microchemical Analysis,** by Prof. H. Behrens of the Polytechnic School, Delft, Holland, with introduction by Prof. John W. Rudd, F. R. S., Royal College of Science, London. Cloth, 246 pages, 34 illustrations. Macmillan & Co., London, and 65 Fifth avenue, New York. Price, \$1.50.

MARKETS.

A COMPLETE PRICES CURRENT, covering all staples, drugs, chemicals, etc., usually purchased by retail druggists, will be found on page 45 of this issue, in the back part of the journal.

Advanced.	Declined.
Balsam Peru	Opium
Coriander seed	Morphine
Lovage root	Balsam fir
Menthol	Citric acid
Oil citronella	Ipecac
Paris green	Oil bergamot
Sarsaparilla	Oil lemon
Spermaceti	Oil orange
	Salts of iron
	Saffron
	Serpentaria root.

New York, May 25, 1894.

With the advent of milder weather there has developed an increased inquiry for the more seasonable varieties of articles in the drug department, such as citric acid, camphor, etc., but the general demand continues almost exclusively for moderate quantities to meet current necessities of consumers, and the movement of round lots is still held in check by the long-delayed and vexatious tariff question. Holders of merchandise, however, are not disposed to force business through the medium of concessions, and values, as a rule, are maintained with a remarkable degree of steadiness. Perhaps this is largely due to the fact that current values are comparatively low, and that in very few instances could stocks be replenished from primary sources at figures materially below ruling spot prices. The orders received cover a wide extent of territory, and show no particular activity in any section, although the West and Southwest are the principal buyers. Speculative interest has again become almost dormant, and the bulk of the business has been in accordance with legitimate wants of the consuming trade. Consequently there has been little opportunity for radical fluctuations, and changes have been mainly within a narrow range. From a financial point of view the situation is satisfactory, and collections are being made with very little difficulty. This is largely the result of careful and conservative methods pursued by consumers when making their purchases, and should meet with approval from dealers, as such conditions naturally impart a feeling of confidence, and give the general market a healthy undertone.

OPIUM—The unsettled condition of the market noted in our last report has resulted in the development of a decidedly weaker feeling, and values have gradually but steadily declined during the interval covered by this review, and a loss is shown of fully 15 cents per lb. The causes influencing the depression are numerous, and include unusually liberal stocks, lack of important demand, weaker primary markets, favorable reports regarding the growing crops and the probability that the article will not be placed on the dutiable list in the pending tariff bill. Some are inclined to believe that sufficient pressure will be forthcoming at the proper time to

reconsider the question of duty, and that the original proposition to exact \$1 per lb. will finally succeed. Others are equally sanguine that it will remain on the free list, and they predict further concessions in prices.

POWDERED OPIUM—Is also weak and lower, and the reduction is fully 25 cents per lb. on the various tests. The demand, however, has been unimportant, and buyers have kept close to actual necessities in view of the depressed condition of the market for gum.

MORPHINE—Has also been affected by the weakness in opium, and, on the 19th inst., manufacturers announced a general reduction of 10 cents per oz. on all-sized packages of acetate, muriate and sulphate. The decline has not stimulated demand, and the market has presented a quiet appearance.

QUININE—There is no material change in the general condition of the market for this article, except that the stock in second hands has been gradually reduced by a steady, far, consuming demand, and a consequent firmer feeling is manifest on the part of holders. Manufacturers of both domestic and foreign adhere steadily to previous prices, and there is nothing in the future outlook of a discouraging character. On the contrary, the belief is gaining ground that as soon as the low cost supplies in second hands are absorbed manufacturers will again advance their selling limit.

ARSENIC—No change has occurred in white, the desirable brands being held with steadiness under a fair inquiry, but Saxony red has ruled easier, owing to increased offerings, and values show a fractional decline.

BALSAM COPAIBA—A continued firm feeling prevails throughout the market, with jobbing parcels moving freely into channels of consumption, and, although former prices are still acceptable, there are indications of an early improvement in strictly prime grades of Central American, which are said to be in exceedingly limited supply and more or less concentrated in few hands.

BALSAM FIR—The outlook for new crop Canada continues promising, and the tone of the spot market is easy, with values showing a further decline of 5 cents per lb. Consumers are slow to respond, and no business of consequence has transpired.

BALSAM PERU—Has continued to harlequin under the influences previously noted, and the principal holders have advanced their quotations 10@15 cents per lb. For small lots in outside hands former prices might yet be accepted.

CORIANDER SPED—The closely concentrated stock is held with decided firmness, and values are again slightly higher, with every probability of a further advance as the result of increasing scarcity.

CITRIC ACID—Is seasonably active, and a fairly liberal business is in progress, but owing to lower markets abroad values have ruled easy, and manufacturers have reduced quotations 1 cent per lb. for both kegs and barrels.

CAMPHOR—Is also meeting with the usual active seasonable demand, but the market is without other noteworthy feature, as manufacturers' prices remain un-

changed, and there is nothing in the condition of the market for crude to influence any material fluctuation.

CHOCOLATE—The last season's output has about all come forward, and with the principal consumers well supplied there is not much inquiry for the stock remaining in first hands. Values, however, are fairly steady, and there is no pressure to force business.

CHLORATE OF POTASH—Remains dull, with the tone of the market weak, and fractional concessions have been granted to purchasers of English crystals.

CASCARA SAGRADA—Prime quality old has continued in active demand and steady, but new crop has been arriving in liberal quantities, and values have ruled weak and lower.

COLAINE—Manufacturers have made a reduction of 50 cents per oz. in their schedule rates for all sized packages and now quote ounces \$5.45, halves \$5.50, quarters \$5.55 and eighths \$5.65.

COD LIVER OIL—There has been no material change in prices during the past two weeks, but the market is hardly so firm as on the date of our last issue, and there is less anxiety shown by buyers. Holders of the more popular brands report a fair distribution to consumers, but transactions have been mainly of the jobbing order.

DEER TONGUE—Is very scarce, and current quotations are comparatively extreme, but consumers in want of stock seem to realize the situation and meet holders' views.

IPECACUANHA—Has declined abroad, and prices here are easier, with some holders reporting a decline of 2-1-2 cents per lb.

JUNPER BERRIES—Are firmer on the report that the new crop is practically a failure, and that prime old are very scarce in primary markets.

GUM KINO—Is strong at the advance previously noted, and, with the limited stock steadily diminishing, still higher prices are anticipated.

LOVAGE ROOT—Is scarce and higher, holders having advanced prices 5@10 cents per lb., but there is no important inquiry.

MANNA—Has been receiving increased attention, and some business is reported in large flake, but at lower prices. Small flake is wanted at slight concessions from previous figures, but holders are decidedly firm and quote an advance of one cent.

MENTHOL—Has further improved, in sympathy with foreign markets, and the bulk of the available stock is held at prices showing an advance of fully 25 cents per lb.

OIL BERGAMOT—Sanderson's and other brands have declined 10 cents per lb.

OIL LEMON—Values of all brands have been reduced 5 cents, and concentrated is \$4 per lb. lower.

OIL ORANGE—Also shows a reduction of 5 cents on all varieties, and \$4 on concentrated.

OIL CITRONELLA—Is in light supply and wanted, with the tone of the market firm and values about 1 cent higher.

OIL CUBEB—Shows a lamper range, mainly in sympathy with the easy feeling in berries, occasioned by liberal stocks.

OIL PENNYROYAL—The demand increases with the advancing season, and prices are steadily maintained for both American and foreign.

PAIS GREEN—The market has developed a stronger tone, and on the 15th inst. the combination of manufacturers announced an advance of 3 cents per lb. on all sized packages and quantities. The tendency is still upward, and a further improvement in the near future is not improvable. The following is the new schedule of prices:

In arsenic kegs or casks.....	cents 25
Kegs, 100 to 175 lbs.....	30 1/2
14, 28 and 56 lbs., iron cans or bxs., net weight.....	25
2 to 5 lb. paper bxs.....	25
1 lb. paper bxs.....	25 1/2
1/2 lb. paper bxs.....	27 1/2
1/4 lb. paper bxs.....	29 1/2
One to 5 lb. tin bxs. put up to order at an advance of 1/2 cent per lb. over paper bxs. of similar sizes.	

Terms.—Payable July 1, 1894. Discount, 6 per cent. per annum for unexpired time. Rebates.—To purchasers of 10,000 lbs. or over during the season, 3 cents per lb.; 4,000@10,000 lbs., 2 1/2; 2,000@4,000 lbs., 2; 1,000@2,000 lbs., 1 1/2; 500@1,000 lbs., 1.

SALTS OF IRON—The easier feeling in citric acid has influenced a weaker tendency, and manufacturers of scales have reduced their quotations 2 cents per lb.

SAFFRON—American continues easy in tone, and the principal holders have made a further reduction of 3@5 cents per lb. A fair jobbing business is in progress, but with the tendency of values toward a still lower basis there is no disposition shown to operate in large parcels.

SARSAPARILLA—Mexican is in reduced supply, all the parcels in first hands having been taken either for export or by dealers, and with everything available on the spot controlled by the latter, the tone of the market is firmer, with prices again fractionally higher.

SERPENTARIA ROOT—The near approach of new crop has had a tendency to weaken the market, and sellers have modified their views to the extent of reducing prices 2@3 cents per lb.

SPERMACEITE—Continues to rule strong under light supplies, and values of cakes are about 1 cent per lb. higher.

TONKA BEANS—Angostura are held firmly at the recent advance, and further sales have reduced the spot stock to a minimum. Crop accounts continue unfavorable.

W. H. Bowdler & Co., Boston, report that although beeswax is more plentiful, the surplus is quickly taken by foreign buyers. Prices for crude range from 23 to 30 cents, according to quality. Carnauba wax tends downward in anticipation of the new crop. Ozokerite remains at previously quoted prices.

A thirty-inch wheel, ball-bearing, pneumatic tire bicycle, weighing thirty-seven pounds, for \$35, less 5 per cent. discount for cash in ten days, is what the Columbia Carriage and Cycle Co., 26 Broadway, Milwaukee, Wis., offer in their advertisement in this issue. Or they will ship, C. O. D., with privilege of examination and 7-1-2 per cent. discount. They guarantee the wheel, and refer to any bank in the city of Milwaukee.

A. B. STEVENS.

ONE of the earnest and hardworking men in the profession of pharmacy is A. B. Stevens of the University of Michigan. There are few men who so ardently desire those advancements and reforms which will place the pharmaceutical profession upon a broad and solid basis, and few who, from an honest love of the profession are willing to make such personal sacrifice of time and labor to accomplish these results.

Mr. Stevens is a thoroughly self-made man, being obliged by the death of his parents to rely upon himself at a very early age. With a record for good scholarship and excellent moral character he graduated from the University of Michigan in 1875, without having had any previous experience.

Times were hard, positions were scarce and Mr. Stevens labored under the disadvantage of possessing few acquaintances able to assist him in the pharma-

ceutical line. The first position offered him was that of errand boy in a thriving store in Detroit. The position was accepted, but before the close of the first day his ability and excellent training were recognized, and he was given permission to compound prescriptions. In less than six months he was invited by his employer to take entire charge of the store.

In the year 1877 he opened a prescription store of his own, located upon the corner of Lafayette and Shelby streets, and here for a period of ten years he enjoyed a successful business and made many business and personal friends. He was the first president of the Detroit Pharmaceutical Society, and has ever felt a deep and abiding interest in its welfare. He was for two years instructor in the Detroit Medical College, combining laboratory work with lectures for medical students. In 1887 he was called to

take charge of pharmacy in the School of Pharmacy in the University of Michigan, where he still remains. Mr. Stevens is a thorough and systematic teacher, well abreast of the times. He is a man of honest Christian principle, in hearty sympathy with young men, especially those obliged to rely on themselves for livelihood and education, and is constantly pressing home the need of accurate knowledge and perfect integrity of character in those who wish to enter the pharmaceutical profession. For several years he has been an active member of the American Pharmaceutical Association, having served as secretary and chairman of the section on education and legislation. Mr. Stevens is also the present president of the Michigan State Pharmaceutical Association, an association in which he feels no small degree of interest and of pride.

ESTABLISHED BY THE NEW YORK P. O. IN 1864.

ESTABLISHED 1867.

THE PHARMACEUTICAL ERA.

SEMI-MONTHLY.

Issued on the 1st and 15th of Each Month.

All Communications for this paper should be addressed to:

D. O. HAYNES & CO., Publishers.

106 Fulton St., NEW YORK.

For Subscription and Advertising Rates, see Advertising page 99.

EDITORIAL.

INDEX TO VOLUME XI.

The present issue of the Era is the concluding number of the eleventh volume of the publication, and we feel assured that the verdict which our friends may render upon its contents will be one of commendation which will encourage us to still greater efforts for the future. We take this opportunity to refer to the index which accompanies this number. This index enumerates some 1,600 titles, and a little careful notice will discover the great variety and appropriate nature of the information given. There has been maintained in each number a high average of number and quality of original contributions. Nearly 400 queries from readers have received reply, the illustrations have been profuse and of best quality, and no branch of the drug business has failed to receive thorough attention. Several times has it been necessary to increase the number of pages, so that the total for the volume reaches 596. Although this index may be regarded as a record of achievement, we desire to impress upon our readers its intrinsic value as a guide to recent pharmaceutical affairs, and hope it will prove a key to a storehouse of useful information. When in search of anything of professional interest the best way to find it is to consult the index.

NATIONAL BUREAU OF HEALTH.

A movement fast gathering strength among the medical fraternity is that directed toward the establishment of a national bureau of public health, and in the newspapers, too, appear frequent commendatory expressions. The demand has, in fact, become a public one, and it is very probable that Congress will, at a not far distant date, be called upon to give the matter the attention it merits. The New York Academy of Medicine is distributing a pamphlet collection of literature and editorial opinions, showing the trend of public sentiment, which, it is believed, will crystallize into a formal demand upon Congress to pass some bill which will give that protection to the health of the people which they have a right to demand. As one of our medical exchanges succinctly puts it, "The practically unanimous opinion of the profession, and of all rational thinkers in the general public, is that in the light of modern medical discoveries our people ought not to go on dying by tens of thousands each year from tuberculosis, typhoid fever and diphtheria, for they are all preventable diseases. Certainly much more will be

accomplished by governmental aid, directed in unison with State and local health authorities, than by the latter alone, however well directed."

We would suggest that pharmaceutical associations could do much to aid the cause by passing resolutions of approval, or taking other appropriate action.

PURE ESSENTIAL OILS.

We print elsewhere the major part of the report of the United States Consul at Messina regarding the character of the essential oils produced there. The exhibit is an interesting one, though the conclusion to be drawn from it is not so highly comforting a nature as might be wished. All of the exporters state that the oils of lemon, bergamot, orange, etc., are largely adulterated, and not a few virtually admit that little else than an adulterated product is sent to the United States. Apparently the degree of adulteration is governed by the price to be paid, and the reason given for sending the poor grades to this country is that our market will not pay the price for the pure article. The adulterant most largely employed is oil of turpentine, which in physical character and chemical composition is so closely like the genuine essential oil that it is almost sure to escape detection; in fact, its differentiation with absolute certainty is a matter that few chemists are willing to swear to. Some argue that the addition of turpentine really improves the quality of the essential oil; perhaps so, but the purchaser should be told of its presence. It is curious, too, to see the many degrees of comparison to which the adjective "pure" is subjected in the description of the various brands and qualities. One exporter has been driven to the use of the word in unqualified, naked form to designate his genuine, unsophisticated oil. Apparently the only way to get a pure oil is to pay a good price for it and entrust the order to a firm whose word can be relied upon. There are pure oils in Messina, and the trade of the United States should be willing to pay their value. The drug trade cannot afford to get a reputation for cheap goods in any line.

EDITION AND ISSUE.

The Chemist and Druggist, in its issue of May 19, thus good-naturedly comments upon the Moving Day number of the Era: "The illuminated cover idea which the Chemist and Druggist introduced into pharmaceutical journalism, has moved as far West as Detroit, where the 'moving day edition' of the Pharmaceutical Era comes out with chromo views of Detroit on the front and of New York on the back. The Era seems proud of its number, for it says: 'The edition, if we are correctly informed, is the largest of any drug paper in this or any other country.' Our contemporary is not correctly informed. Its issue is not half the size of the last Winter issue of the Chemist and Druggist, upon which it is admirably modeled."

We must confess that the "illuminated cover idea" was not without precedent when our May 1st issue appeared, but we regret that we cannot show our readers, by reproducing previous contemporaneous efforts along the same line, the

great progress which has been made in such matters. Regarding the size, we must also confess that a copy of the Moving Day number will not weigh as much as the number of the C. & D. referred to, but we still think our statement regarding the edition is correct. In this country we are in the habit of depending upon Noah Webster's excellent Dictionary for a choice of words whenever we desire to be extraordinarily truthful, and, relying upon the correctness of that eminent authority, who says under the head of "Edition, (2.)" The whole number of copies of a work published at once; as, edition of 1,000 copies," we still think we were correctly informed when we used the words "largest edition" for we issued 40,000 copies of that issue. If our friends across the water have, at any time, sent out a larger edition of their excellent journal, why in the name of little Jack Horner and his remarkable feat, have we not been informed of it?

THE VALUE OF TESTIMONIALS.

A case of peculiar significance is now perplexing the legal luminaries in Rochester, N. Y., and vicinity, the result of which may possibly lead to some repairs upon the medical and pharmaceutical codes of ethics, and may, perhaps, pave the way for an additional chapter to the works on Jurisprudence of the allied professions. Albert A. Baker, a druggist of Rochester, has created a precedent which, if success attends his efforts, will redound to the benefit of the general public, and at the same time stand as a danger signal to the venturesome patent medicine man. Mr. Baker has commenced action against the American agents of Acker's English Remedy, to restrain them from publishing and circulating a certain testimonial which he wrote during the Summer of 1891, when he believed that the remedy in question had saved his life. Mr. Baker declares that he forbade the defendants to continue the publication of the testimonial, and that the same was published without his consent and contrary to his wishes. He further avers that the publication has caused him considerable annoyance, as various persons have threatened to boycott his business on account of his appearance as a purveyor of patent medicines.

Now comes an interesting portion of the suit. Mr. Baker says he is a regularly qualified and practicing druggist in the city of Rochester, where he is so well and favorably known "that his recommendation of a drug or medicine is of value to all persons therein concerned," and he now seeks through the present suit to recover a share of the profits which the company has received through the unauthorized publication of his testimonial. The courts have already decided in favor of the plaintiff by overruling a demurrer from the defendant, who contended that there was no cause for action, and the case will be tried upon its merits at an equity term of the Supreme Court this Fall. That the result is awaited with great interest goes without saying. When we consider the vast number of people who have been snatched from untimely graves by using certain patent medicines, and whose portraits have been placed in evidence in the public prints for the detection of the terrified public, the situ-

ation becomes truly appalling. The bare thought that all these people may soon be clamoring for a share in the profits of the proprietary medicine men may well fill the souls of these gentlemen with a horrible dread, and cause the cold, clammy sweat of anguish to roll down their perturbed brows.

GROCERS AND PHARMACY LAWS.

The Grocers' Criterion says: "There is urgent need of a better and more effective pharmacy law than that which exists at the present time, which should determine without question what a grocer can sell in the way of drugs, etc." Our contemporary indulges in the farther reflection that "of course, druggists are interested in preventing, as far as possible, the handling of drugs by grocers, and are zealous in their efforts to prevent grocers from selling patent medicines."

We thoroughly agree with both statements. A law which is capable of various interpretations is assuredly susceptible of improvement. Some of our laws are very loosely drawn and carelessly worded. Grocers are permitted to deal in the "usual domestic remedies." Will any two persons interpret this alike? The law should state explicitly the individual articles the grocer may handle, and not leave it to his rather misty knowledge of chemical and pharmaceutical products to determine which ones fall within his province. We believe the grocer should not be allowed to sell any drugs to be used as medicines. He may sell those which are used in household processes of cleaning and dyeing, for making agricultural insecticides, etc. (though even here it would be better if he did not handle them), but should be rigidly debarred from dealing in remedials and potent medicines. Under present circumstances in this country and because of the absence of drug stores in sparsely settled rural districts, it would perhaps be inexpedient to deny him the sale of patent medicines and regularly packeted and labeled household remedies, but of these he should not be allowed to deal in any which contain principles which, through careless or ignorant use, will result harmfully. We would it were possible to prevent him from selling even this mongrel type of medicines, for the grocer is not the legitimate and natural purveyor of medicines; these belong to the pharmacist, who must qualify himself to handle them by years of professional training, and who, being thus qualified, is held answerable to the law for every remissness. To be sure, Friend Criterion, the druggists are zealous to prevent the handling of drugs and patent medicines by grocers. These belong in the drug trade alone. Over in England, if the grocer sells any poison or any patent medicine containing a poison he is prosecuted. We would like to see similar restrictions here. The people would not suffer if the grocer could not sell drugs; there are properly qualified persons to do this. We do not like to see grocers encroaching upon the druggists' business, nor druggists cutting into the cigar trade, but in this free and enlightened land there seems to be a disposition in every business to get a slice of some other fellow's line. It has reached a point where the grocery and drug trades are so deftly

dovetailed that they cannot be separated without considerable disturbance.

But, anyhow, let us have it down in black and white in the law just what particular drugs, chemicals, patent medicines, etc., the grocer may sell.

THE SEWING CIRCLE.

We have received so many favorable commendations and expressions of hearty good will upon the issue of our "Moving Day" number that it is positively refreshing to welcome a bit of unfavorable comment. While we might have harbored a thought that some of these kind words emanated from an excess of courtesy on the part of our friends, we are in possession of the most satisfactory evidence that the issue as a whole was an unqualified success.

The criticisms in question are from the Bulletin of Pharmacy, and are on much the same line with what Mrs. Jones would tell Mrs. Smith about Mrs. Brown's new dress at the weekly meeting of the sewing circle, but in so doing she calls attention to her own poverty of apparel rather than to the elegance of Mrs. B.'s attire.

Objection is raised to the picture of Niagara Falls upon our front cover. We have always understood that there are a few peculiarly constituted individuals who could never recognize the beauty of that great work of nature. We are content now that one of them has been definitely located. An objection is also lodged against the view of Brooklyn Bridge upon the fourth cover. We fail to see the justice of this criticism, but reflect that it might have been more caustic had the critic ever seen the bridge itself.

Another thing which apparently gnaws at the vitals of our contemporary is the horrible suspicion that we received money for publishing these illustrations. Bless its dear innocent soul, none but a novice at the business would ever think of making such a break, and please don't show such ignorance again. Were we not dealing with a senile old lady with a propensity for gossiping, we might ill naturally say it was none of her business.

The Bulletin also makes the wonderful discovery that we did not do it all ourselves, but that we hired others to help us, and that we are "prancing in borrowed plumes" because we showed illustrations from other printing establishments which did work on the Era. Had our critic taken less time to scour about the printing offices of Detroit to find the originals of our pictures, and more time to examine the molehill out of which he constructed his mountain, he would have discovered that our "labels" were strictly correct in every case, and that on editorial page 391 we extended our hearty thanks to the several concerns who helped us to produce that great number. We tried to be modest in our statements about the number of printing, lithographing and engraving firms we were compelled to call to our assistance in producing the issue, but we are now forced to admit that it did require the combined efforts of several large concerns both in Detroit and New York. We might add that instances are rare where pub-

lications of the character of the Era support "plants" of their own, for they would be needed but a few days in each month to produce editions so few and far between. The exceptions to this rule are those journals which are conducted as side issues to some manufacturing concerns for the advertising of their wares at second-class postage rates, in which case presses and type find continuous employment in turning out patent medicine labels, private formula literature and "ethical platforms" for the guidance of the medical profession.

The most amusing incident at this particular meeting of the old ladies' sewing circle was the sudden departure of Mrs. Smith. She was so nervous and excited after listening to Mrs. Jones' twaddle that she couldn't wait another minute, but toddled right off down to William street to tell "Grandma."

DOSES IN THE U. S. P.

The Pharmacopoeial Convention which met in Washington in May, 1890, instructed the new revision committee to omit doses in the revision of the pharmacopoeia which was given into its charge. Some of the members of the committee individually did not approve of this direction, and the sentiment of a very large proportion of the pharmacists of the country was strongly opposed to it. But the committee of revision had no option in the matter. It was commanded to omit doses, and it did so. The Era has frequently expressed its views on this subject, in effect that, all things considered, it is very desirable that the pharmacist's official guide and authority should be authority on dosage, too. There is now no recognized authority, none which would have immediate recognition in the courts. We have to consult a variety of reference works, reconcile conflicting statements and strike such a mean as seems safest and best.

Of course, we all understand that dosage is not an exact science; but surely the pharmacopoeia can do as much as the dispensatories, and state maximum and minimum limits. It is frequently said that the pharmacopoeia is not popular with druggists, and that physicians hardly use it at all, and this reproach is not entirely unwarranted. The pharmacopoeia is "good, what there is of it," but there isn't enough of it. The druggist, compounding a prescription, can find in the pharmacopoeia the various physical and chemical characteristics of a chemical, but for the (to him) most important information, the size of the dose, he must turn to the dispensatory. As the dispensatory contains all the pharmacopoeia does and much besides, it is natural that it receive the preference. The consequence has been and is that if the pharmacist can afford but one of the works, he purchases the dispensatory. In hundreds of drug stores the pharmacopoeia is not to be found, and, really, if there be found a dispensatory, of what service would be the pharmacopoeia? Of course, the lack of popularity of the pharmacopoeia is largely due to the liberal employment of its text in the larger and more comprehensive dispensatories, and so long as this is allowed, the dispensatories will be

first choice; but beyond all this, is the truth that the pharmacopœia does not give what the druggist wants and needs, and in this category of missing information is that pertaining to doses. Some will say that doses vary so greatly according to the varying conditions under which they are administered that they cannot be stated with definiteness and accuracy; surely the pharmacopœia can be as definite and accurate as the dispensatories, medical works and manufacturers' circulars.

We believe that it will materially enhance the value of the pharmacopœia if the doses are included, and we also believe that the majority of the pharmacists who use this book are of the same opinion. This desirable improvement can be made if the delegates to the convention in 1900, appointed by the several State associations, colleges, etc., are instructed to this effect, and it is the duty of pharmacists to see that their delegates are so instructed.

Pharmacists and physicians who purchase the book are justly entitled to this information, and a liberal discussion of the subject will produce the desired results.

A DANGEROUS CATARRH CURE.

It cannot be denied that there is a legitimate field for proprietary medicines, and that there are legitimate preparations to meet this demand. To greater or less extent the people always have done and always will do a certain amount of self-diagnosing and self-medicating. For minor, trivial ailments they persist in doing themselves, and the choice of the particular remedy is determined largely by the character of the laudatory circulars and attractive advertising matter of the proprietary preparation. To avoid the expense of consultation with a physician the patent medicine is brought to service. Nor can it be denied that there is considerable evidence of good results from such procedure. Statements that self-treatment with secret remedies is futile or dangerous are absolutely without weight against the positive assertions of benefit gained from this or that patent medicine. Nor in the case of very many patent medicines is there much need to condemn them; they may or may not do good, but they surely can do little or no harm. The principal objections to them are their extravagant price, and the encouragement they supply to the habits of self-diagnosing and self-medication, habits of which little good can be said. Thus we may grant a certain sphere of employment to preparations of an innocuous and harmless nature, for the people will have them.

But there is a class which cannot be too severely condemned. It includes preparations which, under a fair exterior of fulsome pretensions, conceal most harmful characteristics. By false claims, by ingeniously worded advertisements, they beguile the people into using so-called remedies which are dangerous in the extreme. For the morphine habit are offered "cures" which contain morphine as the most potent ingredient, for the liquor habit is advised a "non-alcoholic" bitters, which analysis proves as strong in alcohol as is whisky or brandy. There

are others which, while claiming to cure a certain ailment, are almost sure to establish a drug habit infinitely worse than the affection under treatment.

There is one of this latter class brought to our notice concerning which the truth should be known and the people cautioned against it. We refer to Dr. Birney's Catarrh Cure, which is sold indiscriminately by druggists, but which cannot but be considered highly dangerous.

Arthur P. Reynolds, Commissioner of Health for Chicago, submits the following report on this nostrum:

Milk sugar.....	87.73
Cocaine hydrochlorate.....	3.79
Magnesium carbonate.....	5.17
Undetermined matter.....	
Moisture	
Menthol	3.41
Ground herb (probably stramonium)	
	100.00

He thus comments: "The cocaine extracted gave both chemical and physiological tests as to its identity. The ground herb was so small in amount that no alkaloid by which it could be differentiated could be extracted. The cocaine is the only substance in the cure that can be looked upon as dangerous, and the efficacy of the powder is mainly due to its presence. From the figures it is seen that the powder is nearly four per cent. cocaine. In the directions for using the powder, it is divided in about twenty portions and blown over the membranes at intervals of one-half to twelve hours, which in suitable cases will produce a relief from pain. In unsuitable cases relief from pain may not be had, and this will lead to the application of the powder in unusual quantities and consequently poisoning and a strong probability of developing the cocaine habit."

Evidence from druggists is that a cumulative appetite for this "cure" is developed by its use. Customers commencing with one bottle soon buy in quarter dozens, then in half or full dozen lots. The cocaine habit is perhaps the most debasing of all habits arising from the use of poisonous drugs, and the manufacturer who would subject innocent people to the risk of physical, mental and moral debasement should be summarily dealt with by law. It is the duty of the pharmaceutical fraternity to expose such dangerous nostrums, and in every way discourage their indiscriminate use.

PROSECUTION OF SUBSTITUTERS.

The Era related in its news columns, last issue, that the manufacturer of Pinaud's perfumes had secured evidence of wholesale counterfeiting of these goods, especially by parties on the Pacific coast, and proposed to take very stringent measures against them. In this number it is announced that legal action has been instituted, with every prospect of securing judgment against the defendants. The substitution here has been of a particularly offensive and fraudulent nature. Not only have the labels of the genuine been counterfeited, but the bottles themselves, and the customer would be able to find nothing save in the quality of the contents of the package to distinguish it from genuine. Infractionment has taken the form of as close an imi-

tation as possible of the original packages. In many instances whole bottles and labels are used again, and in others bottles are blown and labels lithographed exactly like the original, while all the details are copied, even to the capping of the bottle and the red string used to tie the cap on.

The sympathy of the trade and all right-minded people in general will be with the manufacturer in this instance, and it is to be hoped that he may succeed in making a summary example of the offenders. Any attempt to substitute or counterfeit is prima facie evidence of a fraudulent, even criminal design, and the State prison would seem the proper dwelling place of those who would thus trade upon the privileges and rights of another. If the proprietor of these goods succeeds in bringing these frauds to justice, it should be a most salutary lesson to others of like ilk. There is altogether too gross substitution, wholly inexcusable, being practiced with regard to proprietary articles. The proprietor has his rights in law and justice, and should be supported in them. In the present instance, it would seem that the offenders could be successfully proceeded against on any of several criminal counts, and the reputable trade would receive with satisfaction the news that the guilty parties have been brought up with a sharp turn and subjected to heavy penalty.

WHO DID IT?

An anonymous circular has recently been mailed to our advertising patrons containing a reprint of an article criticizing some features of our "Moving Day Number," which article first appeared in the Bulletin of Pharmacy and was reprinted in the June issue of the Druggists' Circular. In addition to the article the sender prints a note at the bottom of the circular, in black type, insinuating that our claims for the circulation of this special edition may not have been fulfilled.

The article itself is easily diagnosed as a very bad case of "sour grapes," and is so full of misstatements that we do not believe it worthy of serious consideration, but we answer it elsewhere in this issue as we think it deserves. The insinuation about the circulation of the edition is, however, about as contemptible a piece of dirty work as has been brought to our attention.

The Bulletin of Pharmacy is published in Detroit under the name of George S. Davis, who is general manager for the business of Parke, Davis & Co. The Druggists' Circular is published in New York, and its general manager is Benjamin Lillard.

These circulars give no intimation as to who sent them out. They are printed on perfectly plain paper, were mailed in blank envelopes, addressed in a feminine handwriting, and the stamps were canceled at the New York postoffice.

So far as the circulation of the edition is concerned, if any one questions our statement that the edition was 40,000 copies, we gladly invite such person to come to our office and examine our paper bills, printing bills and postoffice receipts, which will fully justify our statement.

We, of course, do not know who mailed the circulars; we have stated the facts, and our readers can draw their own conclusions. We did not suppose that we had a contemporary who was capable of such a contemptible trick. We believe in aggressive methods, and welcome a bit of rivalry among publishers for the sake of relieving the monotony of the business, if nothing else. But we cannot resort to such unprincipled methods as some one of our contemporaries seems inclined to pursue. We respect an open-handed fighter, even if we cannot agree with him, but we have the least particle of respect or consideration for a snake.

[Written for *The Era*.]

ACCOUNTING FOR THE USE OF PATENTS.

By S. P. Whitmarsh.

While proprietary medicines have always been disparaged by the medical profession as either harmful or useless substitutes for treatment by skilled practitioners, there are some reasons which, if fairly considered, should modify this harsh judgment. Perhaps in the light of facts that may be shown, a part of the responsibility for their use by the general public may justly be charged to the account of regularly educated physicians. A few dissent from an unqualified censure of patents and assert that the practice of self-dosing continually with every newly advertised remedy only increases the number of patients and makes professional services more profitable.

This view is quite likely to be correct as the former, and is much more convincing, since it is evident that the large amount of patent medicines consumed does not lessen the need of medical men nor discourage perceptibly the increasing number of those who seek admittance to the portals of the profession. If the rewards of regular medical practice seem to be visibly lessening, we may reasonably attribute the result to other causes not connected with the subject now under discussion.

At present the writer is attempting to account only in part for the influences that have encouraged the use of advertised remedies. One reason apparent at the start is that the public mind has become divested of the awe once felt for professional wisdom. Our educational system now instructs every pupil in the study of physiology and kindred subjects, thus familiarizing the new generation with a kind of knowledge once in the exclusive possession of medical graduates. By these means all are qualified to understand the treatises contained in books, prepared by professional authority, intended for household use, as well as the special literature, widely and freely distributed, for the purpose of explaining the action of advertised compounds. The masses who constitute the public, thus filled with information concerning the structure of the human body and its needs, together with the causes, symptoms and cure of disease, are apt to lose the blind faith once indulged in for professional services. They yearn to put this knowledge to practical use by prescribing for themselves, especially in all cases not classed as acute or dangerous. They are confirmed in the wisdom of this practice, because many advertised compounds bear the names of regular physicians and are introduced in the same way as other patent medicines by exclusive sale under proprietary rights. In only one feature do they differ. The proprietors invite a detailed statement of symptoms from every sufferer likely to become a patient, in order that advice by mail may supplement the virtue of a remedy which, while it is intended to cure a variety of diseases, may need some modification or auxiliary treatment to meet fully the conditions of each case. They thus unite in one person the professional and commercial features of the healing art, and sometimes become thereby possessors of fortunes that never could have

been accumulated by ordinary practice.

In addition to this class who ignore medical ethics, and in consequence are not in good standing with the profession, there are numerous physicians covering large territory in their practice, making stated appointments for consultations and treatment and using secret preparations of their own compounding. They resemble in a degree circuit riders, though they do not exhibit the beneficent and self-denying spirit of their counterparts of religious fame. They are specialists, pure and simple, yet not so simple as many who pin their faith on promises and guarantees that may mean little or much, but seldom, if ever, fill the measure of the patient's expectations. For while giving vehement assurances that unless practical results are secured no pay will be demanded, it usually follows that a fee must precede actual treatment, whether it ends in cure or failure. By appealing to the worn-out, chronic side of human nature by prodigal assurances so tempting to invalids, they successfully poach on the local preserves of their professional brethren, taking the cream of their practice and gathering shekels galore, but never prove so useful to the public as the hard-worked rank and file of the profession.

Though in both cases noted medical ethics condemn such practice as irregular and dishonoring to the profession, it has no more effect in the way of reform than any brutish fulmen launched through resolutions passed at local associations. But there is thereby a weakening of public faith in the efficiency of medical practice that indirectly increases the sale of advertised secret compounds.

This is emphatically an age of doubt. No faith or theory is safe from the free and easy method of analysis that upsets all settled convictions, whether they pertain to politics, religion, literature, philosophy or scientific research. The result is a shattering of idols, and it is just as likely to occur among the members of the medical profession as among the ranks of the laity. Therapeutics, as an applied science, is not exempt from the demon of doubt.

Perhaps for years after his graduation the ambitious practitioner holds to the theories of the old professors, working in a rut, as it were, for the first decade or two, till practice becomes monotonous. In time the once cherished belief in the remedial action of certain drugs is gradually weakened by repeated failures, while the varied effects such remedies have on patients of differing temperament render the practice of medicine, especially in chronic cases, a continued round of uncertain experiment. It may be some new and startling form of disease appears, requiring original and independent investigation, by which he is compelled to a revision of opinions once considered as fully established. In this frame of mind he is not apt to inspire the chronic invalid with hope as he used to when his own faith in the uniform action of medicine was stronger. On the other hand, patients perceiving the half-hearted confidence he has in the virtue of remedies, as prescribed by authority, are inclined to agree with him. Being thus convinced that medical practice is pure ex-

periment in so many cases, as a matter of economy, to save fees for a useless formality in prescribing, they decide to do their own experimenting.

Even in such case the faith of the patient in the curative power of drugs is not destroyed. He only exchanges one adviser for another. Whether that adviser be the advertisement sheet, with its thousands of assuring testimonials pictorially displayed, or the earnest recommendation of a new remedy, urged by a well-known neighbor who had used it with success, and whose word on matters of fact could not be questioned, "hope springs eternal" in the breast of the chronic sufferer. In thus pursuing health he samples all the promising remedies brought to his notice, with occasional success, and perhaps he lives as long and enjoys life fully as well as the layman who never left the orthodox medical faith to stray after strange gods. If he be asked the reason of his falling from grace he will truly reply: "The example of my family physician."

One other peculiarity of medical men may be noticed as having a tendency to weaken the bonds that formerly united physician and patient on a basis of mutual confidence. While this cannot be said of all, it is still so common as to have a perceptible influence. I allude to the practice of routine prescribing. Many physicians are in the habit of repeating some formula in office practice that covers a number of minor ailments, simply to save the trouble of a careful diagnosis of each case; and patients are quick to form conclusions. Whether such prescription hits the case or not they naturally consider it as the equivalent of a patent medicine, and no more likely to be of service than some advertised remedy put up from a stereotyped formula. The advantage, if any, seems to favor the latter, because being made by wholesale process it is more likely to be uniform in quality than the extemporaneous preparation of the druggist. The proprietor of the pharmacy where it is filled, in either case, gets his share of the profits, whoever is the prescriber. In the first instance the physician and he are in harmony, and the ethics of neither profession have been violated. In the second the druggist gets, in addition to a very reasonable profit, a share of unjust criticism from the medical profession, and is treated as an aider and abettor of the refractory patient. But this surely is a non sequitur. For if the druggist may be held accountable to just censure because of being a dealer in proprietary medicines, then the physician is equally responsible for all the vagaries of his hypochondriac patients, whose whims he humors because they swell the emoluments of his practice.

The fact is neither physicians nor pharmacists, as a class, are responsible for the present extensive sale and use of advertised secret compounds. Individuals undoubtedly in both professions have mutually and honestly tried to restrict both sale and use by fair argument and disinterested advice. Among druggists especially many have fought in the defense of medical ethics at a large sacrifice of pecuniary interest. Indeed, it is evident

that neither physicians nor pharmacists can hinder the mighty wave of revolutionary sentiment fostered by the increasing educational fads of the day. It is useless to reprimand or retaliate. The world is changing in mental as well as material characteristics, and the billows of this change are overwhelming opinions that were once thought substantial and worthy of permanent application. All one can now do is to throw a little oil of prudence on the disturbing element, so that long established, useful institutions may ride safely over the present tempestuous sea until time shall bring about more desirable conditions.

[Written for The Era.]

BUTTERNUT OIL.

By C. Hobly, Toledo, Ohio.

About three years ago, or more, we had a call from a lady customer for butternut oil. It was wanted, she said, for cracked nipples, and had been recommended to her by a friend. We had none in stock, could find no quotations in any price list accessible to us, the wholesale dealers had none. Finally, at the urgent request of our nearly distracted customer, we took the bull by the horns, as the saying is, and went to work to prepare some. We obtained the butternuts, cracked them and picked out the meats, which were then pounded fine in an iron mortar, the resulting pasty mass inclosed in muslin and expressed in a heated iron tincture press on a piece of sheet iron with upturned edges, and a spout in one corner to facilitate the collection of the oil. In this way quite a quantity of oil was obtained. Since then we have repeatedly prepared the oil in a similar manner, but only in small quantities and when we were requested to do so.

About four months ago, on receiving another call for some of the oil, we varied the procedure, and instead of expressing the oil, which, when operating with small quantities, is wasteful of oil and involves considerable exertion, we introduced the pasty mass, obtained by pounding the meats in a mortar, into a bottle and poured over it a quantity of benzine. After digesting for several hours and frequently shaking, the benzine was poured on a filter and collected in an evaporating dish, and more benzine poured on the residue in the bottle. The contents of the bottle, after further digestion, were thrown on the filter and the filtrate collected in the dish containing the first liquid poured off. Upon evaporating the benzine there remained a clear, straw-colored oil, possessing, however, a slight odor of benzine, amounting to about 50 per cent. of the meats or kernels; six and a half ounces of butternut meats yielding a little over three and one-fourth ounces of oil. By once more repeating the digestion with more benzine a little more oil might have been obtained, but not enough to pay for the benzine used and the time required for the manipulation. For extracting the oil from six and a half ounces of meats, we used ten ounces of benzine for the first and eight ounces for the second maceration, yielding respectively two and one-fourth ounces and one ounce of oil.

U. S. PHARMACOPOEIA AND ITS RESEARCH COMMITTEES.

To the Missouri State Pharmaceutical Association.

The undersigned has the honor to report the following in regard to the U. S. Pharmacopoeia:

The committee elected by the National Convention, held in Washington, D. C., in May, 1890, for revising the Pharmacopoeia, has, during the past year, completed the work of the seventh revision intrusted to it, and in August, 1893, the first copies of the work were exhibited at the meeting of the American Pharmaceutical Association at Chicago, and an edition of 5,000 copies was placed upon the market. This supply was soon exhausted, and was followed by a second edition of 5,000 copies, and again in 1894 a third edition of 5,000 had to be printed, and a large portion of these is already sold.

Altogether the reception of the work has been a favorable one, both at home and abroad. Criticisms have been published in a number of journals, some of them censuring the committee of revision for introducing or omitting features which were not in the power of the committee to control, as their action was limited by the instructions of the convention which elected the committee. Among the omissions especially censured was the non-introduction of a number of modern synthetic chemicals, such as antipyrin, phenacetin, sulfonal, etc., which are received into European pharmacopoeias. Many of the members of the Committee of Revision were in favor of their admission, but the stringent rule number 6, adopted by the convention, forbade this, and the only remedy for those who wish such preparations introduced will be that the delegates to the next convention give greater liberty of action to the committee they may then elect.

Another objection dwelt on by some critics was the failure to state the doses of the remedial agents, or at least the maximum doses of very active and poisonous preparations. This question was also under discussion in the convention, and though no formal restriction was placed upon the Committee of Revision, the sentiment expressed in the convention was so unfavorable to the introduction of doses that it was not deemed prudent to contravene it.

As in all large publications, a number of misprints have happened, and have been discovered too late for correction in the plates of the first edition. In spite of all care and the most painstaking proofreading, such mishaps will always occur, and are more liable to be overlooked where the authors of the book live distant from each other and from the place of publication. Unless the printing is to be unduly protracted, only a limited time can be given to reading the proofs, and this is much shortened when they are to be sent and returned by mail. In spite of many vigilant eyes, not only of the editor and the whole committee, but also of the outside assistants, a few errors were permitted to pass. Fortunately, they were mostly unimportant, such as each reader would readily correct when noticed, and a list of errata has been published to enable the purchasers of the first edition to correct them. The plates have at once been

corrected, so that the errors are eliminated from the later copies.

Since the publication of the Pharmacopoeia, the Committee of Revision has not been idle. Its active chairman, Dr. Charles Rice, with the consent of all the members, has organized "research" committees to engage in preparatory work in aid of the next revision. Thus far four such committees have been organized:

Research Committee A. Subject—"The feasibility of devising practical methods of assay for drugs containing no sharply defined proximate principles capable of being separated in a sufficiently pure state, such as ergot, digitalis, rhubarb, etc."

Chairman, Dr. W. M. Mew.

Research Committee B. Subject—"Revision of the descriptions and tests of inorganic chemicals, including salts or inorganic bases, with organic acids. Revision of the volumetric assays of the U. S. P. Study of the proper limits of purity or strength of chemicals, now official, or likely to become so hereafter."

Chairman, Dr. Charles O. Curtman.

Research Committee C. Subject—"Inquiry into the feasibility of incorporating into the U. S. P. methods of identifying such drugs as may be found to permit of it in a powdered condition."

Chairman, Dr. H. H. Rusby.

Research Committee D. Subject: "Revision of the description and tests of organic chemicals."

Chairman, Dr. Charles Rice.

The members of these committees are to be selected hereafter, and other committees are to be organized as occasion may arise. The results of the researches of these committees are to be reported to the whole Committee of Revision, and may be published by the authors, provided they state that the papers are reports of the U. S. P. Research Committees. This will secure to the profession an early knowledge of these researches, and an opportunity to repeat the experiments and verify or controvert them.

In conclusion, the undersigned would urge this association to take early action in considering all matters connected with the next revision of the U. S. Pharmacopoeia. Neither the pharmaceutical nor the medical profession is likely to lag behind in the progressive spirit of the age. New methods are being introduced, requiring new agents of medication, obsolete preparations are discarded, other standards of strength or purity may become advisable, and all of such matters require careful study and discussion, and should not be left to be decided at the last moment in a pharmacopoeial convention.

The wishes of this State association should be clearly ascertained in regard to the admission or rejection of certain preparations, in regard to inserting the doses of active remedies, to processes of manufacture or assay of galenic preparations and any other matters connected with our national pharmacopoeia, so that when the time comes to select delegates they may be apprised of the wishes of the profession, and not left to their personal impressions and the impulse of the moment when called upon to cast their

vote for the rules guiding the next committee of revision. Respectfully submitted on behalf of the committee,

CHARLES O. CURTMAN.

Chairman of the Committee on the United States Pharmacopoeia.

[Written for the ERA.]

UNPROFESSIONAL BOTANY.

By L. Sollman.

As Prof. Newcombe cleverly states in *The Era* of May 15, there are three branches to botany, "the physiological, the systematic and the trade branch." For science take the first, for dollars the third, but for pleasure choose the second. It gives you the quickest returns for labor expended. You have most opportunity to practice it. Botany as studied in colleges is a dry, uninviting food. Botany as applied to nature is the most fascinating science. The more you seek the more you find. A mile walk beyond the city limits will give you all the material you need for a week's recreation. It is not necessary to make drudgery of the technique of this science. If you are not impatient, it almost comes to you without your seeking. Here is a way for you to do it. Get Wood's Botany and read carefully the part on Structural Botany. This will make you a little familiar with the technical terms. You'll get fully acquainted with them by having to refer to them in analyzing plants. An alphabetical glossary in the book will refer you to the proper paragraph for each term. Next, get a collecting box (\$1.75) and a plant press (\$2.50). Both may be had from Queen & Co., Philadelphia. All the tools you need are a needle and a lens arranged so that you can either use it offhand or fixed on a stand, for dissecting flowers; \$1.65 buys a very convenient article.

Now go out and collect all you see. Few things will strike you at first, but by and by you will notice anything uncommon fifty feet away. Take a few specimens of any growing plant you run across. Put them in your botany box, where they will keep fresh for several days. When you reach home press one specimen of each kind at once, and when you find time sit down and look at your other specimens critically. Take those first which seem the least complicated and analyze them. If you find the name, so much the better. Put it down in a book, giving also the family it belongs to. You will soon find that you do not always have plain sailing. You find yourself stalled in the midst of the key by its referring to the ovary, which in your specimen is too undeveloped to give information, or by referring to the fruit, which will not be in condition for several months. Don't be discouraged; make a memorandum of such plant, give it a number, stating, too, just how far you have gone with it. You have a pressed specimen. This you will mount, as directed later; on the mount you will give the number corresponding to that in your memorandum books. This enables you to go on with it later in the season. You will find plants out of which you can make nothing. Lay the mounted specimens on one side. Sooner or later you will come across a clue. After one sea-

son's work you will be able to see at a glance to just what family a plant belongs.

Let us revert to the plants put into the press. Set the press in the sun or near a stove. The frailer plants will be dry in two days. Should you need the press for other purposes, remove the half-dry plants from it and lay them between newspapers. put a weight on them and leave them until they are thoroughly dry (otherwise they will wither). When ready to mount them get at any paper store 100 sheets, 24x36, 100-pound manila tag board (wholesale price, \$1.65). Have them cut each sheet into four equal parts (2x18). On these mount your plants, either by sticking them on with silicate of soda applied to the specimen, or by strips of paper which you fasten with liquid glue. If you have found the name of the plant, put it at the bottom of the mount, with any remarks, such as time of flowering, habitat, etc. At the top of the mount put the family. Arrange families in boxes. Any mistakes made or uncertainties will clear up when you look at them collectively on some bleak Winter day.

To go into detail. You will collect Cruciferae and Umbelliferae in flower early in June. It will be impossible to ascertain more than the family. But when you come across the ripe fruit in Fall you can match the plant with your herbarium specimen and find the genus and species. You will be quite at a loss at first in the family of grasses and sedges, but, having them all together in your herbarium, in flower as well as in seed, you will not find it impossible to tell which is which.

You will be amazed what charming things you will see when you look at a flower critically. One may almost say the less showy a flower the more wonderful its construction. A walk in the country will not be an aimless ramble any longer. You will find your hobby ready to be mounted the minute you leave your door. "Collecting something" is part of human nature. Plants are certainly the cheapest, most accessible and most varied article. In a professional way you will very soon commence to be interested in the descriptive botanical names of the U. S. P. and will learn to verify them. If you are anything of a microscopist you will pleasantly glide into pharmacognosy and plant physiology.

A PRETTY WINDOW EXPERIMENT

is described by the Indiana Pharmacist. Prepare a small beaker or jar full of cold saturated solution of Glauber's salt, and into the solution suspend by means of threads a kidney bean and a non-porous body such as a marble, stone, piece of glass, or other suitable material. Now cover the jar, and in a short time there will be seen radiating from the bean small crystals of sulphate of soda, which will increase and give the bean the aspect of a sea-urchin, while the non-porous body remains untouched. The bean appears to have a special partiality for the crystals, which is due in fact to the absorption of water by the bean, but not of the salt. In this way, a super-saturated solution is formed in the immediate neighborhood of the bean, and the crystals, in forming, attach themselves to its surface.

SIX MONTHS IN A FRENCH PHARMACY.

About this time last year, fired by the glowing pictures which I had seen painted from time to time in after-dinner speeches and conference orations by those in authority over us as to the enviable position of that much-protected and professional individual, the foreign pharmacist, I decided to make an attempt to get into the enemy's country, and, from the attitude of an assistant's position, spy out the land. Of course, I did not for one moment doubt the accuracy of the fairy stories I had heard concerning the entire superiority of the foreign article over the commoner English product, for, as all the adherents to the Pharmaceutical Society should do, I implicitly believed all that my mentors uttered, and allowed that the one thing necessary to pharmaceutical salvation was to go and imitate our fortunate foreign brethren as much as possible, and by contact with them acquire a little of their much-lauded superiority.

With this idea in my mind I decided to locate myself in a foreign pharmacy for six or more months, and to this end I advertised in the *Chemist and Druggist* for a position in France, as I possessed a good knowledge of the Gallic tongue. On going through the answers which I received, one presented itself which seemed to be the very thing—a small pharmacy in a fashionable suburb between Paris and St. Germain. The salary was small, as there were no English customers, but it seemed quite enough for a man of modest tastes, so I made up my mind to go, feeling sure, from the fact that my future master was a "pharmacie de la Ire classe" and "ex-Interne des Hopitaux de Paris," that I had made a good choice, an opinion which was amply justified by further acquaintance.

The pharmacy had a pleasing exterior, sufficiently professional to please the most exacting; advertisements and goods on show were conspicuous by their absence, and the only means of recognizing it as the abode of pharmacy was the presence of one or two of the familiar carboys of colored water and some vases of specimens. On entering, the greeting of my future "patron" was all that one could desire. The interior of the pharmacy was quite different from what we are accustomed to. There was no counter. The patron's desk, or "la caisse," took its place. This "caisse" had quite an ecclesiastical appearance, its sober coloring of black and gold and the carved work round the top gave it the air of a pulpit, whilst near to it was a smaller and similar erection for the deputy or clerk. At the opposite end of the shop—I beg its pardon, the pharmacy—was the dispensing pharmacy, and behind it a glazed door with tinted glass, leading into the "laboratoire." Over this door the imitation bronze bust of a patriarchal individual superinscribed "Hippocrate" looked condescendingly down on his disciples with a high and lofty air, as if he had just administered to them the Hippocratic oath.

The bottles, or shop rounds, were all capped with ornamental tin tops, only such as contained alkalies or acids being

*A paper read by Mr. Harold Wyatt, Jr., at a meeting of the Liverpool Pharmaceutical Students' Society. Reprinted from *Ch. and Dr.*

stopped; all the others were corked. The tables were in Latin, those of the wide-mouthed bottles being stuck inside. The ointment pots were of a somewhat fanciful design, with a burnt-in portrait of Galen or some such ancient pill-pounder on the front. The laboratoire—or, as we would call it, the back shop—contained a fair assortment of funnels, presses, and displacement apparatus, and in a small cupboard saccharometers, urinometers, and a set of burettes, as well as some very neat evaporating capsules made of solid nickel, which I afterward found very useful and convenient at the dispensing counter. The cellar, or "la cave," where the mineral waters, oils, fluid extracts, and perfumed waters were kept, was reached from the laboratoire by stone steps, up and down which I traveled during my stay about sixty times a day. A fine, well-kept garden lay behind the house, filled with fruit trees, and, indeed, a little of everything, after the style of the "Swiss Family Robinson's" Island, minus the zoological specimens. At one corner was an Oriental-looking kioski, rejoicing in the name of "Le Pavillon," used as a Summer drawing room, and at the top of the garden behind some small fir trees a little cottage, consisting of three rooms, a baignoir, or bathroom, on one side, a storeroom at the other and between a little bedroom, designed for the reception of the foreigner (myself).

From previous experience during several cycling tours in the north of France my capacity for surprise at novel arrangements on the part of the "darned moussee" was somewhat blunted; still the idea of putting such a prosaic creature as a chemist's assistant in a Fair Rosamond's bower non-plussed me not a little. My "toolhouse," as an irreverent brother dubbed it, besides its novelty, had many advantages, which I discovered as time went on, not the least being its distance from the pharmacy, a space the "sonnette de nuit" could not bridge, rang it never so loudly.

The "patron," in showing me my domicile, poetically remarked that I should be awakened in the morning by the "doux gazouillement des oiseaux et le chant bruyant de notre coq"—the warbling of the birds and the noisy crow of the cock. He added that the perfume of the lilacs, plinks and wall flowers would mount even to my room, where I should be like "mild lord Anglairs" in his country residence, but minus the luxury of carpets, hangings or rent.

All of this was true, except that the cock was a little ill-regulated, suffering from sonnambulism, when he used to crow at the moon, under the impression it was dawn breaking. Then the poetical aspect of the picture faded somewhat, and I felt a desire to arise and hush his joyous chant.

Business began in the pharmacy every morning at 6 o'clock, when the porter, or "garçon de laboratoire," to give him his awe-inspiring French appellation, came out and opened the doors. I was supposed to be in at 7 o'clock ready for work, of which we had even at that early hour plenty, for the market took place every Tuesday and Saturday, and, moreover, the inhabitants were very religious so

far as attending early mass went, and they dropped in on their way back, our establishment being on the highway to the church. These early customers usually wanted mineral purgative waters, the favorites of which were Janos Rubinat, Montmirail, Eau di Glauber and Carabana, and doses of Glauber's salt and Sel de Sedlitz, Epsom salts, as well as quite a respectable quantity of castor oil. The doses of these were surprisingly large—from 30 to 60 grammes (1 to 2 ounces) of the salts, and from 40 to 60 grammes (1-2 to 2 ounces) of the oil being usually taken, and then a small foot bath of Bouillon d'oseille to keep up the action. A whole hottie of Rubinat or Carabana was the dose, but, then, the bottles of Rubinat were only a third of the size of those sold in England. The wealthier customers usually took "Limonade Purgative," similar to our lit. mag. cit. effervesce, a dose containing about 30, 40 or even 60 grammes of true citrate of magnesia—a very palatable preparation and elegant looking, for it was set out in small special bottles, like miniature champagne bottles, with tin foil round the neck.

We breakfasted at 8, after which we had usually a brisk run of business until 12, when we lunched, and could then take it easy for a couple of hours, another rush of work taking place from about 5 to 7, after which we dined, and finally closed the pharmacy shortly after 9. This was the routine each of the seven days, for Sunday was just as busy as a week day, but I got off one-half day a week and for a couple of hours on Sunday, so that I did not do so badly as many "eleves" in other places. The methods of working were, of course, entirely different to those I had previously been used to, so that is was, as the patron said, a second apprenticeship I had to serve. In dispensing all substances, solids and liquids were weighed, the bottle being placed on balance, counterpoised by means of shot, and then the ingredients of the prescription or "ordonnance" added. As will be seen at once, the volume varied with the density of the liquids used, and as the quantities were never ordered, as in England, "add so-and-so," there were continual bothers with fractious customers because their bottles were not filled as full as they expected. The only argument for weighing offered was the self-evident truth that given weights are constant, and, therefore, accurate, while volumes vary with the temperature—a scientific theory, no doubt, but one which fails ignominiously in practice, for the simple reason that the mixtures are taken by measure, and, therefore, whatever slight advantage it might have been to make them by weight is entirely thrown away by the method of administering the finished product.

One very convincing reason for adopting this continental fashion was once given to me, and that was that it saved the washing of measures, but even this merit did not raise it in my estimation. The question of time is not of much importance, as by practice I found that there was not much to choose between our system and the French. Even the Codex tacitly admits that small quantities of potent remedies are more accurately

measured than weighed, for there is a pipette or "compte goutte" ordered for measuring these.

One thing struck me especially, and that was the large use of herbs by the French pharmacist—they were sold loose and in packets to an extent which would surprise the English chemist. Those most in demand were chamomile, marsh-mallow, violets, roses, red poppy, cat's-foot (*Opinaphium dolicum*), colt's-foot, mullein, elder-flowers, mellilot, arnica, borage, lavender, the fruits of the Winter cherry (*Physalis alkekengi*), and of the ordinary anise and the star anise, the roots of the parsley, asparagus, elecampane, chlicory, couch-grass, comfrey (*Symphytum off.*) and houndstongue. Large use was made of the leaves of absinth, anemone, belladonna, centaury, hyssop and mint. Cherry stalks were also in demand.

The extract theriaca, consisting of fifty-seven ingredients, I found was very popular, and ext. discordium, with seventeen ingredients, seemed to hold a good position in public esteem.

The tinctures were simply made by maceration, and were not made up to any given quantity, and in addition to the ordinary preparations I found that there were also "alcooclitures" or tinctures made from fresh plants, such as aconite, arnica, anemone leaves, belladonna leaves, etc.

As to syrups, their name is legion, and they constitute a large proportion of the stock of a continental pharmacist. The making of pills did not strike me as being perfect in any sense, and I fancy that I have left behind me much better methods in the pharmacy than I found, but while the pill of the pharmacy leaves much to be desired, I may say I saw some capital pills made by a Parisian house, where the name of the pill had been legibly stamped upon each one. They were well made, and were a decided novelty. While they do not excel as pill-makers, they put up an enormous number of cachets, and this is most puzzling at first to the novice. Many ingenious machines are made for filling them, etc., but once the practice is acquired, they can be rapidly prepared.

Suppositories and kindred preparations can be subjected to the same criticism, as I found that they were invariably lacking in finish and neatness compared with the English article. The sizes were also much larger than we are accustomed to use, and seemed to harmonize in proportion with the doses of purgatives to which I have already referred.

In conclusion I must say that my stay in "La Belle France" was, on the whole, a most happy and profitable one. I learned much that was interesting and valuable to me as a pharmacist, and at the same time had the privilege of residing for some time in a foreign country and forming associations which will afford food for pleasant recollections for many years to come. Given a fair knowledge of the language, I can strongly recommend any Englishman to repeat my experiences.

During the month of March, 1894, the United States imported perfumes, cosmetics and toilet preparations amounting to \$33,658 against \$90,338 for the corresponding period of 1893. The exports of the same class of goods during the same period aggregated \$22,428 for 1894 against \$25,496 for 1893.

THE BACTERIA OF WATER.

By M. L. Grimbert.

It is not very many years ago that the only method of determining the purity of water was to subject it to chemical analysis; but water may afford no indication of the presence of mineral salts, nor even of organic matter; it may, indeed, present all the appearance of distilled water, and be declared by the chemist to be of equal purity, but may, nevertheless, on investigation by the bacteriologist, be found to be impregnated with the germs of fatal disease.

It is admitted, in principle, that all waters contain bacteria of some sort, with the exception of springs coming from a great depth, which have been deprived of the germs in the original source by filtration through the soil. The rain as it falls is permeated with microbes taken up in the atmosphere, and even spring water after it comes to the surface is soon im-

pregnated with decomposing animal refuse from various sources, constituting a favorable medium for the rapid multiplication of disease germs.

Before submitting a sample of water to bacteriological analysis, the first point to be attended to is to heat the bottle in which it is to be tested to a temperature of 212 degrees Fahrenheit, to destroy any germs it may contain. The sample must then be examined at once for its bacterial contents, because multiplication is extremely rapid. A sample of water from the Vanna, which contained fifty-six bacteria per centimeter when drawn, contained 22,140 after twenty-four hours, and 500,000 after three days. At low temperatures the bacteria cease to multiply.

FIG. 1.

FIG. 2.

Two methods are employed for the enumeration of bacteria, depending on whether one adopts a liquid or a solid medium. The adoption of a liquid medium is Pasteur's, but it has been employed by Miquel since 1873. The water

the water diluted as above described, or not diluted, according to circumstances, and after intimate mixture this gelatin be poured on a glass plate to cool, it will solidify on cooling and imprison the germs contained in the water. Each microbe thus isolated begins to multiply at once and to give rise to spots in the gelatin more or less apparent, and of a form and as-

pect varying with the species. These are called colonies (Fig. 1). After a certain time there will be as many of these colonies in the gelatin as there were individual microbes in the cubic centimeter of water. This system appears much simpler than Pasteur's, but it has some serious drawbacks. The gelatin is liable to liquefy at a temperature above 52 degrees, and some microbes have the property of liquifying gelatin.

From experiments made by Miquel it appears that the number of microbes in a given sample of water increases with its impurity, and that the water, whether of rivers or of springs, is found most impregnated during the rainy season. Ice is found to be impregnated with the microbes that were in the water; most bacteria, whether pathogenic or not, being capable of withstanding a great degree of cold.

But the number of microbes is a matter of little significance in comparison with their character. The enormous rapidity of increase, under favorable conditions, is such that if pathogenic germs are pres-

FIG. 7.

FIG. 8.

ent their number is a matter of only secondary consideration.

The principal pathogenic microbes which have been identified are here illustrated. The *Vibrio septicus* (Fig. 2) is the cause of gangrene; the bacillus of tetanus (Fig. 3) exists normally in the soil; the *Staphylococcus pyogenes* (Fig. 4) resembles a bunch of grapes and is found for the most part in purulent ulcers, abscesses, whitlows, etc. The bacillus tuberculosis (Fig. 5) is the cause of consumption. Their spores are sometimes found in the waters of certain meadows where diseased animals have been buried, and similarly in some wells. The bacillus of typhus (Fig. 6) does not liquify gelatin. Its movements are very lively, and when largely magnified (B), it is seen to be armed with long vibratory cilia. The *Bacterium coli commune* (Fig. 7), also furnished with vibratory cilia, is not unlike the last named; but its presence in water, although evidence of contamination by sewage, is of no very grave significance. The *Bacillus virgale* (Fig. 8) is the vibrio of cholera

morbus, and is found in the water of certain Indian rivers. Fig. 9 represents a series of colonies of this bacillus in gelatin, reduced to about one-fourth the natural size.—(Revue Eneye. Translation in Literary Digest.)

FIG. 9.

[Written for The Era.]

PHARMACY IN AUSTRALIA.

It will surprise you to know that although the colony of New South Wales is 105 years old, being the parent of the Australasian group, she has no Pharmacy act and no proper Medical act. In 1876 the pharmacists contrived to induce the then Government to pass what is known as "The Sale and Use of Poisons Act," and notwithstanding all the pressure brought to bear upon successive governments, a comprehensive pharmacy bill has never yet seen the light of Parliament. The moving spirits among the drug men who are registered under the Poisons act set to work a few years ago and drafted a bill, which is now in the hands of the Dibbs Government, and from present appearances—the triennial term of Parliament being all but run out—it is more than likely that it will remain in the background until it is nanded by the next or some future House. In the mean time qualified men from adjoining colonies and foreign countries are debarred registration by the Pharmacy Board, who are forced "with regret" to carry out the unjust provisions of the Poisons act. Now, you will see at a glance how narrow-minded an act this is. The qualifications for registration are three in number, viz.: 1, "Duly admitted pharmaceutical chemists of Great Britain or licentiates of the Apothecaries' Halls of London or Dublin;" 2, "Those who were carrying on the business of a chemist and druggist in New South Wales prior to 1878," and 3, "Apprentices and assistants (of three years) in New South Wales who pass the examination of the Pharmaceutical Society." So that, apart from Great Britain, every other country in the world is shut out, and there isn't even reciprocal relations with the colonies of the group, or the option of going up for examination left to any person outside of her territory. It is an odd circumstance that, while the Poisons act lays down such hard and fast rules for the registration of chemists and druggists, there is absolutely no power to stop any person from opening a shop, putting up his name as a chemist and druggist and dispensing in the usual way, but if he be detected selling the scheduled poisons he is liable to a penalty not exceeding twenty pounds (£20).

FIG. 3.

FIG. 4.

to be examined is diluted to one-tenth, one-hundredth, one-thousandth, etc., with sterilized water. This method, although it has given very excellent results in the hands of its author, is fast giving place to the system of culture in solid media, invented by Koch. The medium employed is a gelatin solution of such a strength that it will solidify at ordinary temperatures, but remain liquid at a temperature ranging from 100 to 110 degrees F. This is what is known as a nutrient gelatin culture. If to a small volume of this liquid gelatin be added a cubic centimeter of

The majority of qualified men who are refused registration in New South Wales do not avail themselves of the weaknesses of the Poisons act as they might do. Doubtless this is partly owing to sentimental feelings regarding the honor of their profession and the indignity of carrying on a business without the stamp of the authorities. The charlatans, however, go in extensively for the trade, and the result is that the city of Sydney is the great quackery seat of the Sunny South. It is only on rare occasions that they are bowled out by the police for selling poisons, and, the fines inflicted being on the lower scale, they can afford to laugh in their sleeves at the Poisons act. Perhaps the only redeeming feature of the Poisons act is that it gives the Pharmaceutical Society the power of conducting two examinations, viz.: 1, preliminary (for apprenticeship); 2, final (for registration). In the first examination the youths, before being apprenticed, must pass a fair school examination, including Latin, but in the final a very high standard is required, so high, indeed, that only about 30 per cent. get through it. In the colony of Victoria the standard is even higher than in New South Wales, and this is accounted for by the fact that in Melbourne (the capital) they have a properly constituted pharmaceutical college, with an English professor at its head. None of the other colonies can vie with "Marvelous Melbourne" in this respect. It does seem a strange thing that New South Wales should be the only British possession of any importance minus a Pharmacy act, while she is surrounded with perfect pieces of legislative machinery in Victoria, Queensland and South Australia.

A few words about the New South Wales Medical bill will not be out of place here, seeing that the high and honored professions of physicians and surgeons have, in connection with their Medical bill, been treated in much the same way as the pharmacists. Every Parliament for upward of ten years past has been urged to pass a medical act that will do away with quackery once and for all time, but it has not yet found a place among the statutes of New South Wales. When the bill was first introduced it was thought to be of too drastic a character altogether, and the influence worked by the quacks settled its pretensions pretty quickly. Of late years the unqualified and incompetent practitioners have had a run of bad luck, and not a few of them are now serving long terms of imprisonment for causing the deaths of patients. The exposures made in these cases and the lamentable ignorance displayed by the so-called "doctors" have at last opened the eyes of the public to the dangers of quackery, and there is little doubt that the Medical bill now before Parliament will become law before the end of June. Its provisions completely strangle every form of medical and surgical humbug. In this matter also the mother colony has, as usual, been lagging behind her much younger offshoots. Instead of setting them an example. The colony of Victoria squelched the quack doctor ages ago, and her laws are so powerful and far-reaching that a qualified practitioner who is only "surgeon" dare not style himself "doctor."

With an idea that matters in the drug and chemical line from a commercial standpoint possess a reciprocal interest for the inhabitants of two countries which are very nearly antipodal, an illustration is presented herewith of the patent and sundry department of a representative New Zealand firm, Kempthorne, Prosser & Co.'s New Zealand Drug Co., Dunedin. This company had its inception over thirty years ago in the wholesale drug firm of Youngman & Co., at Otago, who were later succeeded by the present proprietors, who in 1878 organized a limited liability company for the manufacture of heavy chemicals, acids, ammonia, linseed oil and manures, with a capital stock of £200,000 sterling, of which £57,604 has been paid in. Besides extensive chemical works at Burnside, the company owns a factory at Otago, where they manufacture a line of proprietary articles, and they have warehouses in nearly all the important towns of New Zealand and operate other extensive chemical works at Westfield. The prosperity of the company may be estimated by the fact that over £93,000 has been paid shareholders in dividends since its organization.

The president of the Pharmacy Board and Pharmaceutical Society of New South Wales, H. R. Brothwood, was sued recently in the law courts by a married woman for negligence in dispensing a prescription, and she claimed £200 damages. She had been suffering from internal inflammation, and her doctor prescribed bismuth, catechu and morphia. Upon analysis, the unused portion of the medicine proved that the full bottle had only contained ten instead of eighteen grains of bismuth. The woman's evidence was a highly varnished and exaggerated tale of pains and suffering brought on by the medicine, and subsequent incapacity to perform her household duties. The doctor who prescribed the medicine proved conclusively that the pains complained of were not caused by the medicine at all, and her case for damages fairly broke down. Mr. Brothwood, relying upon this evidence to win him the case, made no defense, but on the analyst's evidence the Judge was obliged to give the plaintiff a verdict for 1 shilling and 9 pence, the price of the medicine. The druggists look upon the action as an attempt to levy "blackmail," and they are trying to devise some means of safeguarding themselves in future. The liq. bismuth used by Mr. Brothwood was bought in the usual way from a leading wholesale house.

The nuns at the Wellington Convent, New Zealand, are manufacturing large quantities of Mother Aubert's remedies, which were advertised extensively some time back. Sister Mary Joseph Aubert, the reverend mother of the convent, is an elderly Frenchwoman of great talent, and she claims to have discovered some splendid medicinal extracts from plants indigenous to Maoriland. Eight of the medicines are named in the Maori tongue—tatara, marupa, kataka, paramo, parupou, mopere, natanata and karana. She also distills the enca'yptus. In 1880 she made a seven years' contract with Kempthorne, Prosser & Co., wholesale druggists of New Zealand, to supply annually thirty-five gallons of marupa, paramo,

karana and natanata. The contract was broken by the firm after the first year, and the reverend mother took the matter into court, claiming £500 damages. The defense was that some of the medicines fermented and became unmarketable, and that the firm had lost considerably by the agreement. Her answer to this was that the preparations had been diluted, contrary to her instructions. The Chief Justice, in deciding the case, said it was clear that the plaintiff had carried out her part of the agreement, and awarded her £210, with costs.

Pears' Soap Company have secured a great victory over a local manufacturer named Field, who hails from Hamburg. It was incontestably proved in the Court of Equity that Field was putting up an inferior and cheap transparent soap in a wrapper identical with Pears', calculated to deceive the public. The only difference in the wrappers was the names "Pears" and "Field." The Injunction applied for was unhesitatingly granted by the Chief Justice in Equity.

The Victorian Board of Pharmacy has gained convictions against a great number of "Herbalists" and "Healers" for selling pills composed of aloes, iron and some oily substance. One of the principal offenders, Elizabeth Gould, who styled herself "American Herbalist," had been doing a profitable business in "ladies' irregularity" and getting ten shillings and six pence for a small box of pills. It was a very gross case, and she was fined heavily. Similar offenders in future will be sent to jail, in addition to heavy fines. The druggists of Victoria are co-operating for the wholesale prosecution of all grocers and other tradespeople who offer for sale any preparation of drugs or medicines, patent or otherwise, and it appears from the law that they have ample powers to carry out their intentions.

A pharmacist named William Paul Walkley Green was sentenced to death in Melbourne last month for performing an operation for abortion on a girl named Elizabeth Coade, who died in his house soon after the instrument had been used. He had practically no defense to make. A recommendation to mercy and an influentially signed petition were the means of having the death sentence commuted to ten years' penal servitude. Just twelve months ago he was tried in Sydney on a similar charge, and had a very narrow escape. A Western Australian pharmacist, named William Chopin, is awaiting trial for a like offense.

Notwithstanding the stringency of the Poisons acts throughout the colonies, suicides by poisoning continue with unabated frequency. The favorite poisons used to be chlorodyne, carbolic acid and rough on rats; but latterly there has been quite a run on matchheads, which offer a striking example of the power of "fashion" over the female mind. Four women in Auckland, New Zealand, attempted self-destruction by this means last month. Three of them were saved by the use of the stomach pump, but the fourth died in great agony. There were also fatal cases in Sydney and Melbourne, the quantities taken being the heads of from two to six boxes of matches.

Sundry and Patent Department, New Zealand Drug Co.

Charles Dickenson, a well-known chemist of Great Britain and dispenser to the Sydney Hospital, died in a singular way through taking sp. am. arom. rather too freely. Up to a few weeks before his death he was a very temperate man, but a quarrel with his wife in the precincts of the hospital, in which a second lady figured, lost him his position, and he took to drinking. In trying to pull himself together one morning with strong doses of sp. am. arom. he gave signs of choking, and died before medical assistance was at hand. At first it was thought he had suicided, but this proved to be incorrect.

J. B. Montford, chemist, of Sydney, has disappeared mysteriously. He was last seen at a race meeting, and having won a good sum of money, it is thought he has met with foul play at the hands of thieves. There is no trace of him at all.

Charles Liversidge sued the Australian Drug Company last month for wrongful dismissal, and got a verdict for £200 damages. He was engaged by the company for three years as bottle finisher, at £4 per week and sixpence per gross commission, but was discharged before the expiration of the time for incompetency. It was proved in evidence that he was thoroughly competent, but was not supplied with proper tools to do the work. On this ground he gained the action.

Under the Trade Mark act of South Australia, the Collector of Customs has issued a series of regulations of a very important character. The act prohibits the importation of goods having applied to them: (1) Forged trade marks, (2) False trade descriptions or marks, (3) Names

or descriptions otherwise illegal. Goods manufactured outside of South Australia must bear a definite indication of the country in which they are made.

The Pharmacy Board of New Zealand is having a new pharmacy bill introduced to Parliament. It is framed on the lines of the Victorian Pharmacy act.

The adulteration of spirits with chemicals is a serious blot on the commercial morality of spirit merchants and publicans in Australia. Sulphuric acid is one of the commonest methods adopted, and it is no wonder that madness and lunacy through drink are so common. A Sydney publican has just been convicted of putting free sulphuric acid in whisky, which was found by the Government analyst to be forty-five degrees under proof. When the acid was separated from the spirit it charred straw and paper. The spirits consumed in New South Wales and Queensland are the most poisonous imaginable. In the interior of Queensland it is not uncommon for shearers and boundary riders (cowboys) to drink such mixtures as whisky and kerosene, whisky and turpentine and a popular stimulant—pain killer and Worcester sauce. This is no exaggeration of fact.

Thomas Jones, a registered Sydney pharmacist, has been sentenced to fourteen days' imprisonment for exposing for sale articles known as "pessaire preventif," "French letters" and "rubber rings with a serrated edge" attached to diagrams of the male and female generative organs. An appeal has been lodged against the conviction.

PHARMACY.

FORMALIN AS A DEODORIZING AGENT.—Schmidt has observed that on adding formalin to putrefied meat broth the offensive odor immediately disappears (Ph. Zts. Ph. Jr.). The same effect is produced on adding formalin to putrid urine. The smell of faeces is also destroyed by formalin. Further inquiry as to the chemical nature of the change thus produced showed that when a solution of sulphuretted hydrogen is shaken with a sufficient quantity of formalin, the odor of the gas disappears, and is replaced by a faint alliaceous smell, and it is suggested that the reaction taking place may be represented by the following equation:

Or when there is sufficient excess of formalin to remove the mercaptan smell

Methylmercaptan, CH_3SH which is according to Nencki, the chief cause of the odor of faeces, is rapidly decomposed by an excess of formalin. Ammonia and ammonia bases are immediately converted into inodoriferous products. Skatol is not acted upon by formalin unless hydrochloric acid is added, and then it is converted into an odorless product insoluble in water. In this respect, synthetic skatol differs from its isomer methylindol, which is immediately acted upon by formalin.

The trade in freckle lotions and similar toilet preparations is now in danger. The latest "fad"—the red parasol—is said to be a very efficient preventive of this unpleasant pigmentation.

EXPERIMENTS WITH LIQUID OXYGEN.—By means of the intense cold produced in his experiments in liquefying gases, combined with an exhaustion not before attained, Prof. Dewar has proved that mercury distills, as do phosphorus and sulphur, at the ordinary temperature when the vapor pressure is under the millionth of an atmosphere. The increasing indispersion shown by the chemical elements to combine with one another as the absolute zero is approached, was well illustrated in an experiment in which liquid oxygen was cooled—200 degrees C. On inserting a glowing piece of wood into the vessel above the liquid, it refused to burst into flame. Another interesting experiment was that of immersing an electric pile, composed of carbon and sodium, into liquid oxygen, almost immediately the electric current ceased, in consequence of the suspension of chemical action. Absolute alcohol, run upon the surface of liquid air, after rolling about in the spheroidal state, suddenly solidifies into a hard transparent ice, which rattles on the sides of the vacuum test-tube like marble. On lifting the solid alcohol out by means of a looped wire, the application of the flame of a Bunsen burner will not ignite it. After a time the solid melts and falls from the looped wire like thick syrup.

STERILIZATION BY FILTERS.—Filtration through porous filtering media has been considered an excellent method of removing from water any microbes it may contain, but nothing is less certain. As early as 1885, Bourquelot and Gallipe had protested against the supposed infallibility of these filters, finding as the result of their experiments that microbes could pass through the porous porcelain. Their conclusions have been confirmed by the experiments of Lacour-Eymard (Revue d'hygiène.) The results of introducing cultures of *Bacterium termo*, *B. coli commune*, and *Micrococcus prodigiosus*, into clean and sterilized Chamberland filters, are represented in the following table, the number of colonies per cubic centimetre of the filtered water, found at the end of the eighth to the fifteenth day respectively, being there given in columns:

Name of Organism.	8th to 10th day.	11th day.	12th day.	13th day.	14th day.	15th day.
<i>B. termo</i>	2 to 5	24	116			480
<i>B. coli commune</i>	Few		8	20	24	320
<i>M. prodigiosus</i>	—	—	48	169	234	380

These filters appear, therefore, to be far from affording absolute security; and the porous cylinders should be carefully cleaned and sterilized every three days at least, and a pressure of not more than two atmospheres be maintained, to insure even relative security. *Medicine moderne*. (Ph. Jr. and Trans.)

ODD BAROMETERS.—Two of the oddest and oddest forms of popular barometers, says a writer in the *London Spectator* (*Popular Science Monthly*), are the leech in a bottle and a frog on a ladder. Mr. Richard Inwards has seen an old Spanish drawing of nine positions of the leech, with verses describing its attitude and behavior before different kinds of weather. Dr. Merryweather of Whitby

contrived an apparatus by which one of twelve leeches confined in bottles rang a bell when a tempest was expected. When leeches were kept in every chemist's shop, and often in private houses, their behavior was the subject of constant observation; and it was generally noticed that in still weather, dry or wet, they remained at the bottom, but rose, often as much as twenty-four hours in advance, before a change; and in case of a thunder storm rose very quickly to the surface, descending when it had passed. The frog barometer, used in Germany and Switzerland, is a very simple apparatus, consisting of a jar of water, a frog and a little wooden stepladder. If the frog comes out and sits on the steps rain is expected. The weather glass dearest to the old-fashioned cottage in the last generation was the "old man and old woman," who came out of their rough-cast cottage in foul or fair weather respectively. This was almost the earliest of semi-scientific toys, and depended on the contracting of a piece of catgut fastened to a lever. The belief that bees will not fly before a shower is probably true and is the rational origin of the banging of trays and iron pots with a door key when bees are going to swarm. The insects are supposed to take this for thunder, and so settle close at hand, instead of swarming at a distance. Sprinkling water on them with a garden syringe often makes them settle at once. But no such ingenious process of rationalizing can be found for the belief that if the insect inside cuckoo spit lies head upward the Summer will be dry, though the increased worrying of horses by flies before rain and the rise of the gossamer before fine weather are abundantly confirmed by observation.

SYNTHETIC POWERS OF MICRO-ORGANISMS.—Among all living organisms, the micro-organisms, micrococci as well as bacteria, bacilli and spirilla, are especially remarkable for their intensity of chemical activity. Oxidations and decompositions, reductions and synthetic processes are effected on an extensive scale. (O. Loew, *Centralbl. f. Bakteriol.*, Ch. News.)

If we consider the destructive and the synthetic operations, we must arrive at the conclusion that the former are necessary for carrying on the latter. The former yield not only the forces necessary for the synthetic work, but also the suitable atomic groups. It is certainly a highly interesting question of physiological chemistry to study the relations of the two different directions and to elucidate which are the groups that serve for the synthetic work. We must first consider the chemical structure of the compounds that can serve as nutrients, we must investigate the causes that bring about the transformation of potential into actual energy, and we must recognize above all that the proteids of the living protoplasm are chemically distinct from those of the dead. We must acknowledge that when the labile character of the former changes by atomic migration into a stable one the death of the cells has come.

Nutritive and poisonous qualities are relative conceptions. Poisons may become nutrients for bacteria when highly diluted,

as phenol or acetic ether, and nutrients may become unfit for nutrition if the concentration reaches certain limits. Small chemical changes may convert a nutrient substance into a poison and, again, the poison into an indifferent substance.

As albuminous matter contains carbon, hydrogen, nitrogen, sulphur and oxygen, we have to consider principally the question which substances are suitable sources for the carbon, which for the nitrogen, which for the sulphur. Experiments lead to the following conclusions.

(1) As sources of carbon can be used in neutral or feebly alkaline solutions, alcohols, phenols, organic acids, ketones, aldehydes, carbohydrates, ethers and esters, many alkaloids.

(2) As sources of nitrogen can serve ammonium salts, nitriles, amido-acids, amines, ureas, guanidines, alkaloids, nitrates and nitrites.

(3) As sources of sulphur may serve sulphates, sulphites, polysulphites, sulphoacids, mercaptans, sulphones.

The nucleins which contain phosphoric acid in their molecule are here left out of consideration.

The following conclusions are drawn for most of the non-pathogenic microbes.

(1) Hydroxylated acids are better than the corresponding non-hydroxylated ones, e. g., lactic acid is better than propionic acid.

(2) Polyvalent alcohols are more favorable for the development than the corresponding monovalent alcohols, e. g., glycerin is better than propylic alcohol.

(3) The nutritive quality of the fatty acids and monovalent alcohols decreases with the increase of the number of carbon atoms in their molecules. Thus acetic acid is better than butyric acid.

(4) The entrance of aldehyde or ketone groups increases the nutritive properties; glucose is better than mannite.

(5) I have observed neither nutritious nor poisonous properties in picro-nitric acid, chloral hydrate, pinakon, ethylen-diamine, glyoxal, amido-acetal, Acetoxime, diacetonamin and meleinic acid are very poor nutrients. According to E. Meyer, mesaconic, succinic, paramethylsuccinic, dimethyl-succinic and benzoyl-succinic acids are not capable of serving as food.

(6) The poisonous properties are determined by the energy with which the unstable atoms of the living protoplasm are attacked.

DIPHTHERIA-ANTITOXINE.

This preparation is one lately introduced to the medical profession as a remedy for diphtheria, its method of action depending, it is said, upon the theory advanced by Richet, Henricourt and others that immunity from infectious diseases can be produced by the formation of protective substances in the blood by means of specific antitoxines. By the employment of virulent diphtheria cultivations antitoxine is obtained from the blood serum of animals. It has no accurately defined chemical characteristics, its value being determined by the smallest quantity which will exactly destroy a definite quantity of diphtheria virus. A prescribed quantity of the solution is injected beneath the skin of the back or breast by means of a sterilized syringe in the method of treatment.

FORMULARY AND QUESTION BOX.

The object of this department is to furnish our subscribers with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION. To insure answer in the next number, queries should be in our hands ten days prior to the date of issue.

6223. *Interstate Registration.*

(L. P. C.)—See reply to query 6151, May 15, Era, page 466.

6224. *To Preserve Asparagus.*

(E. G. L.)—Wants a formula for preserving asparagus in sealed salt-mouth bottles for an unlimited time. He has tried one or two antiseptics, but has been unable to preserve it more than a short time. We would like the opinions of our readers upon the subject.

6225. *Discovery of Peroxide of Hydrogen.*

(J. L. G.)—So far as we are able to ascertain, peroxide of hydrogen was not known prior to 1818. All writers on chemistry are quite unanimous in ascribing its discovery to Thenard. Relative to the subject, we take the following paragraph from *Bache's Chemistry*, a book published in 1819: "Water is capable of combining with oxygen. This extraordinary discovery was made toward the close of the last year (1818), by Thenard, while pursuing his researches on the oxidizement (?) of different substances, to which he was led by previous discovery of the oxidized acids."

6226. *Color of Donovan's Solution.*

(E. R.)—The deepening of color noticed by you in this solution is due to the presence of free iodine. The proper hue may be restored and the free iodine recombined by triturating the solution with a little metallic mercury or finely powdered arsenic. The reason for such a procedure is apparent when it is remembered that Donovan's solution is made by triturating red mercuric iodide with arsenic iodide in distilled water until solution is effected. No chemical reaction takes place in the preparation of this solution. Although almost insoluble in water mercuric iodide is soluble in the solution of arsenic iodide. After triturating with the mercury or arsenic the solution should be carefully filtered.

6227. *Books on Venereal Diseases.*

(W. W. S.)—You can gain much historical information on the subject from a perusal of a French work by Buret, "Syphilis To-Day and Among the Ancients." An English translation may be obtained in three volumes, viz.: First, "Syphilis in Ancient and Prehistoric Times"; second, "Syphilis in the Middle Ages," and, third, "Syphilis in Modern Times." Price, \$1.25 per volume. For a small practical treatise in condensed form Culver and Hayden's "Manual of Venereal Diseases" is a good one; price, \$1.75. The following may be also quoted: Milton's "Gonorrhoea and Spermatorrhoea," price \$4; Sturgis's "Manual of Venereal Diseases," price, \$1.25; Hill & Cooper's "Venereal Diseases," price, \$1. Any or all of these books may be obtained through this office.

6228. *Thiersch's Powder.*

(W. E. B.)—As you have given us no information regarding this powder or its employment, we cannot but suspect that you refer to a mixture of powdered salicylic and boracic acids used to make the extensively used Thiersch's Antiseptic Solution (so named after a German surgeon). The formula reads:

Salicylic acid..... 2 parts.
Boracic acid..... 12 parts.
Water1,000 parts.

In the June 1, 1891, Era was published a formula for the preparation of this powder into compressed tablets, each one containing 14 grains salicylic acid and 84 grains of boracic acid, the proportions necessary to make a pint solution of the desired strength, as needed.

6229. *Nitrous Ether and Iodides.*

(E. R.)—Spirit of nitrous ether causes liberation of iodine from potassium iodide, the change being one of oxidation and reduction, nitric acid being produced from the acid radical of the nitrous ether. This change is facilitated by or dependent upon the solution being acid and as spirit of nitrous ether is nearly always acid from the formation of a little acetic acid or some nitrogen acid in it, you will generally notice a quick darkening of the solution when you attempt to mix soluble iodides with spirits of nitrous ether. The change does not take place in neutral or alkaline solution, and you should be careful to see that your nitrous ether is not acid when you attempt to dispense a mixture of this nature. Some dispensers add a little bi-carbonate of potassium until the acidity is neutralized, but it is better to employ a fresh article, which will require but little, perhaps no addition of alkali.

6230. *Glycerine as a Menstruum.*

(C. M. G.)—Glycerine cannot be used indiscriminately as a portion of the menstruum employed in making fluid extracts. The proportion in the menstruum must depend upon the nature of the drug itself and a proportion which is suitable in one instance would not be advisable in another. Glycerine has peculiar and high solvent power and it was found that while it would produce clear, elegant fluid extracts, they would be so loaded up with dissolved inert and worthless material that the value of the preparation was not at all enhanced. There has been much study of this subject of the use of glycerine and the formulas of the pharmacopoeia have been changed with each revision. By studying the present volume you will notice that various proportions are employed in the various instances. Both the new dispensaries have something to say upon the matter and we would suggest a reference to them.

6231. *Hair-Curling Preparation.*

(F. H. S.)—We cannot give you the formula you desire. Try one of the following:

(1)
Carbonate potash 2 drams.
Water of ammonia..... 1 dram.
Glycerine 4 drams.
Alcohol 12 drams.
Rose water 18 grains.
Mix together. Moisten the hair; adjust it loosely, when it curls upon drying.

(2)

Saccharated solution of
lime 2 drams.
Mucilage of acacia..... 4 drams.
Essence of rose..... ½ dram.
Water to make..... 6 ounces.

(3)

Mucilage of quince seed may be used as a bandoline, or tincture benzoin with a little washed sulphur and oil of sweet almonds.

(4)

Make a thick mucilage of gum tragacanth in rosewater. Add a small quantity of salicylic acid dissolved in alcohol as a preservative agent.

6232. *Cleaning Fluid.*

(C. L. K.) asks how he can dispense the following formula, taken from the April 15, 1892, Era, so as to make a clear and transparent mixture:

Benzine deodorized 1 quart.
Alcohol 1 ounce.
Bay rum..... ½ ounce.
Oil wintergreen..... ½ ounce.
Ammonia ½ ounce.
Chloroform ½ ounce.
Sulphuric ether ½ ounce.
Borax ½ dram.

As written, this formula will not make a transparent mixture, owing to the insolubility of the various ingredients in the benzine. Benzine does not dissolve or mix with solutions made wholly or in part with water, but is soluble in about 6 parts of alcohol and is readily miscible with chloroform and ether. Why not reorganize the formula, omitting those ingredients which are immiscible or insoluble with the benzine?

6233. *Precipitate in Castor Oil.*

(L. A. W.) complains that in a sample of castor oil which he has there developed a very appreciable white sediment in the bottom of the bottle, and that the longer it stands the greater in amount becomes the precipitate. This precipitate dissolves upon heating the oil. We can only surmise the cause of the trouble. Castor oil, if improperly prepared, is very apt to throw down a sediment upon exposure to low temperatures. The so-called cold-pressed oil is preferable to the hot-pressed in this particular. It is said that much of the American oil is prepared merely allowing it to stand for some time after expression and then drawing off for marketing, and that this quality is very apt to deposit a sediment upon standing, and it may be necessary to filter it through coarse paper before dispensing. In the preparation of castor oil the mixture of oil and water and the various impurities are allowed to stand, when separation leaves the oil on top, the mucilage and starch dissolved in the water, and the albumen coagulated by the heat. This albumen forms a layer between the oil and water, and in drawing off the oil it must not be drawn too closely. We are inclined to think that your sample is of a poorly prepared oil, though it may be a case of intentional adulteration, in which case careful chemical analysis would be necessary to determine the exact character of the adulterant. You can find considerable information in this line in the dispensaries.

6234. Liquid Mucilage Gum Arabic.

(C. H. C.)—Probably no better formula can be devised than that given in the U. S. Pharmacopœia. It can be very readily made by simply triturating the granulated gum arabic, to be had in the market, with the requisite quantity of water. Another method is by circulatory displacement, by suspending a bag of cheese cloth or muslin containing the whole gum in the proper amount of water near its upper surface. The water in contact with the gum dissolves some of it, the solution sinks to the bottom on account of its gravity, a proportionate amount of water rising at the same time. Solution continues until the water is saturated, or until the gum is all dissolved. The method, though very good, is practiced by few pharmacists; it deserves wider use. An improvement on the muslin or cloth is the use of a small glass funnel whose stem has been broken off, and of which there are usually a variety of sizes in drug stores, especially where the small boy predominates. The funnel containing the washed gum is suspended in the water in a way that its upper surface is level with the surface of the water, so that there can be a circulation through the funnel. The solution can be hurried by mixing the whole gum with clean large-grain gravel. This latter modification is especially applicable for making quantities larger than a pint. The vessel containing the water should be as deep as possible. Boric acid preserves the mucilage very well, and is usually not an objection.

6235. Dressing for Russet Shoes.

(T. B. C.)

(1)

Soft soap.....4 drams.
Linsed oil.....6 drams.
Annatto solution (in oil).....2 ounces.
Beeswax.....6 drams.
Turpentine.....2 ounces.
Water.....2 ounces.

Dissolve the soap in the water and add the annatto. Melt the wax in the oil and turpentine; then gradually stir in the soap solution. Keep stirred until cold.

(2)

Oil of turpentine.....20 parts.
Yellow wax.....9 parts.
Soap (ordinary bar).....1 part.
Boiling water.....20 parts.

Dissolve the wax in the turpentine by the aid of the water bath and the soap in the hot water. Mix in a hot mortar and agitate until cold.

(3)

Palm oil.....16 parts.
Common soap.....43 parts.
Oleic acid.....32 parts.
Glycerine.....10 parts.
Tannic acid.....1 part.

Melt the soap and palm oil together with a very gentle heat. When the soap is dissolved add the oleic acid. Dissolve the tannin in the glycerine, add to the hot mixture and stir until cold.

6236. Parrish's Compound Elixir of Buchu.

(F. J. S.) The following formula taken from Parrish's Pharmacy under the title Compound Fluid Extract of Buchu is probably the one you want.

Buchu, in coars*

Powder.....12 troy ounces.

Alcohol.....3 pints.

Water.....6 pints or sufficient.

Treat the leaves by maceration and displacement, first with a portion of the alcohol, and then with the remainder mixed with water; evaporate the resulting liquid by a gentle heat to three pints, and to this add:

Sugar.....2 1/2 pounds.

Continue the heat till it is dissolved, and after removing from the fire add:

Oil of cubeb.....1 fluid dram

Oil of juniper.....1 fluid dram.

Spirit nitrous ether.....12 fluid ounces.

Previously mixed, stir the whole together.

It will be perceived that this preparation differs from the official fluid extract, in containing sugar sufficient to impart sweetness to the taste, and the oils of cubeb and juniper and the spirit of nitrous ether, which are not only useful as therapeutic agents in the majority of cases in which cubeb would be used, but act as antiseptics, and would render the preparation permanent without the presence of alcohol or sugar. The dose is a fluid dram three or four times daily.

6237. Latin Abbreviations and the Metric System.

(Druggist) asks for an interpretation of the following prescription and the best method of compounding:

R

Sodii bromidum.....20

Potassi bromidum.....12

Elix. ammonii valerianatis.....100 c. c.

M. ft. sol.

Sig. S ij in wineglass of water t. i. d.

While not fully expressed, it is plain the prescriber wanted a mixture containing 20 grams of sodium bromide and 12 grams of potassium bromide in 100 cubic centimeters of elixir valerianate of ammonium. As to the interpretation of the directions to the patient there is but little difficulty experienced in making them out, the prescriber having used the sign to express the quantity to be taken, and the abbreviations of the Latin phrase *ter in die*, "three times a day," or "thrice daily." The directions should be written on the label, 2 teaspoonfuls (2 drams) in a wineglass of water three times a day.

Expressing the quantities in equivalents of English weights and measures, we have:

Sodium bromide.....308.6 grains

Potassium bromide.....156.1 grains

Elixir ammonium valer-

ianate.....3 fl. ozs., 183.1 minims

To dispense the prescription, first reduce the salts to fine powder, and triturate in a mortar with the elixir of ammonium valerianate until solution is effected.

6238. Violet Water.

(G. D. F.)

(1) Violet pomade.....6 pounds.

Alcohol.....1 gallon.

Macerate and digest in a closed vessel for a month and decant. Then add 3 ounces tincture orris root and 3 ounces spirit cassie to each pint.

(2) Extract violet (from po-

made).....2 fl. ounces.

Extract cassie (from po-

made).....6 fl. drams.

Spirit of rose.....6 fl. drams.

Cologne spirit.....1 pint.

(3) Extract violet (from po-

made).....3 fl. drams.

Extract cassie (from po-

made).....3 fl. drams.

Spirit of rose.....4 fl. drams.

Tincture of Florentine

orris.....4 fl. drams

Cologne spirit.....1 pint.

(4) Extract violet (from po-

made).....3 fl. ounces.

Extract cassie (from po-

made).....4 fl. ounces.

Tincture of orris root.....6 fl. ounces.

Extract musk.....1/2 fl. ounce.

Extract rose.....1/2 fl. ounce.

Extract jasmine.....5 fl. ounces.

Deodorized alcohol.....9 pints.

Distilled water.....1 1/2 pints.

Magnesium carbonate, q. s.

Mix. If cloudy, filter the product, previously mixed with the magnesium carbonate, and color slightly by the cautious addition of tincture of sage or tincture of common grass.

6239. Essence of Ginger.

(J. A. P.) We think you will find an excellent preparation in the following, taken from the Era Formulary:

(1)

Jamaica ginger, ground.....2 pounds.

Pumice stone, powdered.....2 ounces.

Lime, slaked.....2 ounces.

Dilute alcohol sufficient to make four pints. Rub the ginger with the pumice stone and lime, thoroughly mixed; then moisten with dilute alcohol until perfectly saturated; place the mixture in a narrow percolator, being careful not to use any force in packing, simply so that the menstruum will go through uniformly; lastly, add dilute alcohol and proceed until four pints of percolate are obtained. Allow the liquid to stand twenty-four hours and filter if necessary.

(2)

Fluid extract ginger (U.

S. P.).....4 fl. ounces.

Magnesium carbonate.

Water.

Alcohol. Of each a sufficient amount.

Evaporate the fluid extract to 1 fluid ounce; add enough magnesium carbonate to form a creamy mixture, then water to bring to the measure of 8 fluid ounces. Rub well together and filter. To the filtrate add enough alcohol to make a total of 16 fluid ounces. Color, if desirable, with caramel. See also formula No. 242 in National Formulary.

(3)

Ginger, unbleached.....4 ounces.

Calamus.....2 drams.

Canada snakeroot.....2 drams.

Cinnamon.....1 dram.

Mace.....1 dram.

Cloves.....1 dram.

Alcohol, enough to make.....16 ounces.

6240. Pills for Dogs.

(W. S. E.) We cannot give you the formula for the proprietary article you desire. Perhaps one of the following may be of service to you:

(1)

Cinchona, powdered.....4 drams.

Extract gentian.....2 drams.

Make into 40 pills and give 2 twice a day.

- (2)
Saccharated carbonate of
Iron 2 grains.
Extract nuxvomica..... 1/2 grain.
Extract gentian..... 2 grains.
Excipient q. s.

For 1 pill to be given daily.

Here is a formula for an alternative remedy:

- (3)
Mercury with chalk..... 30 grains.
Powdered aloes, Barba-
does..... 8 grains.
Extract of rhubarb..... 20 grains.
Sulphur..... 45 grains.
Excipient q. s.

Make into 15 pills; give 1 three times a week.

(4) Laxative pills.

- Blue mass..... 2 1/2 grains.
Extract colchicum acetic. 1/4 grain.
Extract hyoscyamus..... 1 grain.
Extract colocynth com-
pound 5 grains.
One pill to be given occasionally.

6241. Lavender Water.

(G. D. F.) Here are a number of formulas:

- (1)
Oil lavender flowers..... 4 drams.
Oil bergamot..... 1 dram.
Oil lemon, fresh..... 1 dram.
Oil cloves..... 5 drops.
Oil rose..... 3 drops.
Tincture civet..... 20 drops.
Extract ambergris..... 1/2 dram.
Balsam Peru..... 1 dram.
Alcohol, deodorized..... 15 ounces.
Orange flower water..... 1 ounce.

- (2)
Oil patchouly..... 1/2 dram.
Oil lavender flowers..... 1/2 ounce.
Oil cloves..... 15 drops.
Oil wintergreen..... 15 drops.
Oil bay leaves..... 1/2 dram.
Oil ylang ylang..... 10 drops.
Benzoic acid..... 1 dram.
Orange flower water..... 1 ounce.
Alcohol..... 1 pint.

- (3)
Oil lavender..... 8 ounces.
Essence musk..... 4 ounces.
Oil bergamot..... 1 1/2 ounces.
Alcohol..... 2 gallons.

- (4)
Oil lavender..... 4 ounces.
Magnesium carbonate..... 1 ounce.
Rose water..... 1 pint.
Deodorized alcohol..... 6 pints.
Triturate the oil with the carbonate, gradually adding the water and the alcohol, previously mixed, and filter. See also Era Formulary, formula Nos. 1535 to 1551 inclusive.

6242 Fat and Physiological Development.

(M. E. C.) No method of treatment can be devised nor can a special diet for the purpose of fattening one be outlined that will fit each individual case. The power to store up fat in adipose tissue is much more dependent on certain inborn qualities of the organism than it is on the kind of food. This is obvious when we remember that of two persons on the same diet and under the same circumstances, one will become fat while the other will remain lean. Theoretically foods rich in carbohydrates produce the greatest amount of fat. Further aids in

fattening may be found in providing repose for the body of such a kind that, while sufficient energy is expended to secure adequate digestion and absorption of food, all causes leading to an increase of the chemical changes taking place in the tissue by which energy is set free and leaves the body are avoided as much as possible. Physical development does not always mean an increase in one's adipose tissue. Far from it. It means physical training both physiological and hygienic. It means the development of the muscles, and has an important bearing on the internal organs and their functions as well. Poor food, undue mental strain, dejected spirits, etc., all tend to hinder physical development. Exercise, sunshine and fresh air all tend to strengthen the organism and bring it to its highest development. This condition does not always mean extraordinary physical endurance, but it does mean ease and grace of motion. Muscular capacity depends on muscular contractibility, and this condition is undoubtedly best promoted by frequent moderate exercise. It has been demonstrated beyond question that massage treatment will enlarge and strengthen the muscles, and nothing better promotes an independent "kneading" of them or is more conducive to the accelerated flow of blood and lymph than gymnastics practiced moderately.

Training not only increases the strength of the muscles, but results in their working with greater economy, and consequently less nutrition is called for.

One's physical training should be designed to further the proper exercise of the functions of all the organs and impart that healthy physiological condition indispensable to freedom and grace of motion. Consultation of competent authority alone can outline the proper method for you to follow. Unfortunately there are very few books which classify gymnastics according to their physiological importance, and are at the same time so written that they may be read with pleasure.

6243. Vanilla Extract from Vanilla Sugar.

(F. P. M. & W. A. C.)—There is no standard formula for vanilla sugar from which to prepare vanilla extract. To be sure, sugar is used in varying proportions in different formulas, for a double purpose, to facilitate powdering the vanilla and to give the resulting extract a sweet taste. The following formulas for extract vanilla have proven very satisfactory:

(1) Vanilla, good quality, 1 ounce; cut into small pieces and triturate with 2 ounces coarse granulated sugar. Place in a percolator and throw on dilute alcohol until a pint of tincture has passed, add this to 1 pint simple syrup and mix.

(2) Four ounces of Mexican vanilla beans, cut small, and granulated sugar are rubbed up thoroughly together, then moistened with 50 per cent. alcohol, packed in a percolator, macerated 24 hours, and then displaced at the rate of 30 drops per minute until 4 pints of extract are obtained.

- (3)
Vanilla..... 1-4 ounce.
Tonka..... 1-4 ounce.

Sugar, water, alcohol, of each a sufficient quantity.

Reduce the beans to a powder, with sugar gradually added to absorb the juice, pack in a prepared percolator, and extract with dilute alcohol, making one pint of the extract.

- (4) Hager gives this for vanilla sugar:
Vanilla..... 10 parts.
Milk sugar..... 20 parts.
Cane sugar..... 70 parts.
(5) The Pharmacopœia Gallica is authority for this one:
Vanilla..... 1 part.
Sugar..... 9 parts.

(6) Here is a formula in which vanillin is used:

- Crystallized vanillin..... 25 grams.
Sugar..... 95 grams.
Alcohol (absolute)..... 100 grams.

Dissolve the vanillin in the alcohol and pour the solution on the sugar, distributing as evenly as possible through it. Dry, powder and sift. This sugar contains 2-3 per cent. of vanillin and may be used in the same proportions as the finest vanilla.

(7) Vanilla essence.

- Crystallized vanillin..... 25 grams.
Absolute alcohol..... 400 grams.
Distilled water..... 455 grams.

6244. Formalin and Formic Aldehyde.

(F. M. E.)—Considerable information regarding this preparation may be found in the June 15, 1893, Era, page 563. It is said to be a solution containing from 35 to 40 per cent. of formic aldehyde, a substance discovered by A. W. Hoffman in 1869. According to the testimony of Stahl, Lieberich, Blum, Cohn and other investigators, formic aldehyde possesses great chemical activity in attacking albumenoid substances and rendering them unfit to enter into vital reactions. On account of this property the solution has been highly recommended as an antiseptic for sterilizing purposes in surgery, for the preservation of zoological specimens for museum purposes and as a general practical disinfectant. It has been employed in the Pathological Institute of Berlin for the preservation of anatomical preparations and cadavers.

FORMULAS.

6245. Roup Powder.

- Potassium chlorate 1 oz
Powdered cubes..... 1 oz
Powdered anise 2 oz
Powdered Iodine..... 1-2 ozs

Mix a teaspoonful with the food for 20 hens.

6246. Starch Gloss.

- Ch. and Dr. Dary.
Borax 4 parts
Gum arabic..... 1 part

6247. Saturated solution borax..... 2 parts
Tragacanth mucilage..... 1 part
Mix 1 tablespoonful to a pint of starch.

6248. Spermaceti 1 ounce
Gum arabic..... 1 ounce
Borax 1 ounce
Glycerine 2-3 ounces
Water 14-2 ounces
Powder the spermaceti with the borax, emulsify with the gum and water, and add the glycerine.

6240. **Papain Elixir.**

Ch. and Dr.

Papain	11.0
Glycerine	60.0
Sherry wine	150.0
Saccharin	0.4

Chloroform water, add to make 300 grammes. Keep for a week, shaking frequently, and then filter. A teaspoonful contains about 2 grains papain.

6250. **Tomato Sauce.**

Ripe tomatoes	3 dozen
Chill vinegar	1 pint
Garlic	1 ounce
Shallots	1 ounce
Common salt	2 ounces
Cayenne pepper	1-2 dram
Lemon juice	5 ounces

Put the tomatoes in a jar and warm in an oven till tender. Cool, skin and pulp the fruit and add to the liquor in a jar along with the rest of the ingredients. Mix well and bottle.

6251. **Tomato Ketchup.**

Take one bushel of ripe tomatoes, mash them in a basin or kettle, put them on the fire and reduce them to a pulp; strain this pulp through a hair sieve, in order to free it from the seeds and skins; then boil the pulp down to one-half its original bulk; then add one ounce of ground cloves and a quarter ounce each of ground mace, ginger and cayenne pepper and a small teaspoonful of fine salt; mix all well together, place on the fire and boil it two-thirds away, stirring continually with a long-handled wooden spatula, after which add one pint of the best wine or cider vinegar; boil and stir a few minutes longer, then remove and bottle; cork tightly and keep in a cool place.

CLEANING CHAMOIS LEATHER. One way is to place a wet towel on the face of the leather, and to allow it to remain three or four days, by which time all the dirt and grease will be softened, and it will be an easy task to rub it off by means of a sponge. When dry, the leather should be rubbed over with a little linseed oil, which will have the effect of softening it.

Another method is to rub the chamols well over with softsoap until it is thoroughly clean, and then to rinse in warm water to which soda has been added, employing also, if necessary, a little yellow soap. After rinsing, the leather should be wrung well in a soft towel and dried quickly, and then, even before it is perfectly dry, rubbed well in the hands to soften it.

To the carriage builder, the lint from the chamols leather is a perfect abomination, and it will be found to pay to have a set of leathers for each operation rather than to endeavor to use the same leather for all grades of the work. In the above directions it is well to point out that warm water does not mean hot water; nothing above lukewarm should be used, or the skin will become tough, thick and useless. When grease or paint has gotten practically makes it useless, proceed as follows: Soak the skin over night in a bucket of water to which has been added a little ammonia, then thoroughly rinse and wash with pure water with castile soap.

EXAMINATION QUESTIONS.

This Department is for the publication of questions and answers from our readers; the object being to place before them questions for self-examination and to indicate the directions in which study can be profitably carried on.

We solicit questions to which replies are desired, particularly questions suggested by personal experience and study.

Correct answers to the questions in each series will be published in a subsequent issue of the paper, as announced, together with the names of all persons sending us correct replies.

Write the number of the series at the top of your reply and write on one side of sheet only.

Address—EDITOR PHARMACEUTICAL ERA,
106 FULTON STREET, NEW YORK.

SERIES NO. 5.

Replies should reach us not later than July 15, 1894. Correct answers, together with the names of all persons answering correctly eight or more of the questions, will be published as soon thereafter as possible.

(1) How many grams of official acetic acid can be obtained from 500 grams of sugar of lead? How many grams of official sulphuric acid is required to decompose this amount of sugar of lead, and what would be the weight of the lead sulphate formed?

(2) What do you understand by the terms oxidation and reduction as employed in chemistry? Complete the following equations; noting the oxidation or reduction changes, if any:

(3) How many avoirdupois pounds of U. S. P. sodium carbonate are required to precipitate 100 troy pounds of calcium chloride?

(4) Given a mixture of copper acetate and silver nitrate in solution. Map out a scheme of qualitative analysis, which shall detect and identify these bases and acids and which shall guard against the presence of other bases and acids. Explain briefly the reason for each step in the analysis.

(5) Express this prescription in the metric system. Criticise it fully:

Quinine sulphate, 25 grains.

Sulphuric acid, 10 drops.

Potassium iodide, ½ dram.

Syrup of orange peel, 2 ounces.

Water enough to make 4 ounces.

(6) The following equation expresses the chemical change effected when ferrous sulphate is oxidized by nitric acid in presence of sulphuric acid to form ferric sulphate (tersulphate):

Using 150 grams of official ferrous sulphate, how many grams each of official nitric acid and official sulphuric acid will be required for complete oxidation and how many grams of tersulphate would be the theoretical yield? Write out the calculations in full and show the methods employed.

(7) In adjoining drawers in a drug store were kept respectively Glauber's salt and sal soda. In some way the labels have been removed and the druggist wishes to identify the contents of each drawer. How may he best do it?

(8) A druggist has two avoirdupois pounds of red cinchona bark which shows upon assay 2.5 per cent. of quinine alkaloid.

How many grains of official quinine sulphate should he theoretically be able to obtain from this bark? Exhibit the figures used in calculations.

(9) How would you distinguish between antipyrin and acetanilid? Between bismuth subnitrate and calomel?

(10) Convert the quantities in the following formula into their equivalents in apothecary's system.

Tincture of ferric chloride.....	1 cc.
Dilute acetic acid	1.5 cc.
Solution of ammonium acetate.....	10 cc.
Aromatic elixir	5 cc.
Glycerin	6 cc.
Water, sufficient to make.....	50 cc.
Point out the chemical reactions, if any, which take place.	

SUPERIOR POMADES.

Hyacinth Pomade.

Violet Fat (Pomade).....	150 parts
Jasmine Fat (Pomade).....	75 "
Jasmine Oil, Fatty.....	70 "
Cassia Oil.....	50 "
White Vaseline.....	10 "
Hyacinth Essence (Ext.).....	1-2 "

Violet Pomade.

Violet Fat (Pomade).....	2,000 parts
Cassia Pomade.....	750 "
Rose Pomade.....	500 "
Jasmine Oil, Fatty.....	700 "
Orange Oil, Fatty.....	500 "
Balsam Peru.....	8 "
Oil Geranium.....	1 "
White Vaseline.....	100 "

Tea Rose Pomade.

Rose Fat (Pomade).....	3,250 grms.
Jasmine Pomade.....	100 "
Rose Oil, Fatty.....	500 "
White Vaseline.....	100 "
Balsam Peru.....	5 "
Oil Geranium.....	10 "
Oil Cedarwood.....	5 "
*Portugal Oil.....	5 drops
Oil Citronella.....	5 "
Oil Lemon Grass.....	4 "
Raspberry Ether.....	6 "

May Bells Pomade.

Rose Pomade.....	1,500 parts
Cassia Pomade.....	1,000 "
Orange Pomade.....	500 "
Jasmine Oil, Fatty.....	750 "
White Vaseline, Liquid.....	50 "
Oil Coriander.....	10 "
Oil Palma Rosa.....	2 "
Oil Mace.....	1 "
Oil Ylang Ylang.....	1 "

These pomades are exquisite, but expensive, yet where there is a sale for them they yield good profit. They bring from 50 cents to \$1 an ounce, and a little ingenious advertising seems to create a paying demand for them.

TOXICITY OF ANTISEPTIC.—In *Nouv. rem. (Ph. Jr.)* Desessuelle and Charrin have compared the toxicity and bactericidal power of a number of recently introduced bodies derived from corrosive sublimate by the replacement of an equivalent of chlorine with equivalents of various phenols and naphthols. The results are presented in the following tables, the antiseptic and bactericidal power of corrosive sublimate itself being taken as 100.

Substance. Antiseptic Toxicity.	
Phenol sublimate	104
Mercury -hydroxy-phenolate	46
Phenol acetate mixed with mercury	41
Naphthol sublimate	31
Mercury b-naphtholate	25
Mercury acetate	61
	45.

NEWS COMMENT.

The Ale and Beef Manufacturing Co. of Rochester, N. Y., has been dissolved by order of the Court.

The druggists of Lewiston, Me., have combined and adopted a uniform price list on proprietary articles.

McArthur & Son, long-established druggists in Lincoln, Neb., have failed. Assets stated to exceed liabilities.

Three of Cincinnati's drug stores are owned and conducted by a young woman, and she is an aggressive cutter.

The California Board of Pharmacy is making it lively for unregistered pharmacists and those who have failed to renew their registration.

The members of the Dallas (Tex.) Pharmaceutical Society have agreed not to buy any goods from wholesale druggists who retail to outsiders.

Miss Nina Raleigh, employed in the wholesale drug house of Lamar & Sons, Macon, Ga., was horribly burned May 24 through the accidental explosion of an alcohol lamp.

The store of J. F. Albers, at Antigo, Wis., was recently visited by a sneak thief. The thief was traced through a Canadian \$1 bill and given thirty days in the county jail.

Druggist H. Elich of Evanston, Ill., has been convicted through the efforts of the Citizens' League for selling liquor in violation of the law. He was assessed fines aggregating \$350.

A Jersey City couple were married in a drug store on a recent Sunday night, and the druggist says that this is the tenth ceremony of that kind that has been celebrated in his place.

Senator Mills is said to haunt a Washington drug store and has gained a most conglomerate mass of information to assist him in his discussion of the chemical schedule of the tariff bill.

The 4-year-old son of Druggist James A. Cox of Utica, N. Y., while riding in the street on a tricycle was run over and killed by a coach. No complaint was made against the driver.

A woman recently sued four druggists in Marion, Iowa, for \$4,000 for selling liquor to her husband. The case against one of them has been concluded and a verdict rendered against him for \$500.

E. H. Richards has a new drug store at Cedar avenue and Jessie street, Cleveland, furnished and stocked by the Dawes Manufacturing Co., Lehn & Fink, Strong, Cobb & Co. and J. W. Tufts.

Fire in a drug store is a bad thing, but not worse than to have runaway horses of the fire engine dash through one's front window. Druggist F. W. Crist of Chillicothe, Ohio, suffered severely from such a visitation.

Theo Schultz, clerk in the drug store of F. W. Becker, Newark, N. J., had a desperate encounter with a burglar. He was severely injured, but succeeded in driving the intruder away, and the police later captured the thief.

It is related that in a Buffalo drug store a young lady customer for soda water, catching sight of an appeal from a fresh-air mission, heroically gave up her nickel to that charity and left the store without her favorite beverage.

The Chicago owners of a patented process for combining mineral and vegetable oils to produce a food product to compete with the various products of the packing houses claim to have refused a cash offer of \$2,000,000 for their rights.

Some burglars who entered W. C. Hambleton's drug store at Louisville, Ky., recently were evidently going to a picnic or intending to play penny ante, for they stole a lot of cigars, a dozen shirts, some cologne, soap and about a dollar in coppers.

The Medical College of South Carolina has revived its department of pharmacy, which was discontinued in 1885 after two years of existence. The pharmaceutical association of the State proposes to render its best aid in making the department efficient.

J. B. Ardis, druggist at Carroll's Prairie, Tex., has just completed a new building for his use, has enlarged and brightened up his stock, and says that he feels as if he had changed villages. He finds his trade more satisfactory than for three years past.

Druggist H. W. Tempany, in Flatbush, L. I., has been arrested for using the mails for fraudulent purposes. He advertised pills for sale and in each box placed a ticket which purported to be good for a chance at a house, piano, several gold prizes, etc. Unlucky customers made complaint.

George Barnes, druggist in Des Moines, Iowa, is under arrest in connection with the robbery of postage stamps from the Afton postoffice. It is stated in the local papers that it is suspected that he is at the head of a gang of postoffice thieves and that a number of prominent citizens of the city are implicated.

A petition is being circulated in Everett, Mass., to the effect that drug stores be permitted to do a general business on Sunday as well as in medicine, but the local paper points out that the signers are petitioning the officials to sanction the violation of State law. Petition for an alteration of the law is suggested.

H. A. Hill has been awarded \$3,000 damages in his suit for \$15,000 against the Meyer Brothers Drug Co. While employed in their Kansas City branch he was severely injured, losing one eye, through an explosion of chemicals, which he was attempting to remove under direction from a superior during the progress of a fire.

Some of the druggists of Baltimore are a little agitated over the ruling of the authorities that liquors cannot be sold even on physicians' prescriptions unless the druggist has paid the special tax under the internal revenue laws. Some twenty-five druggists have found it expedient to settle the threatened prosecution by procuring this special license.

E. E. BENJAMIN.

After a long and painful illness, Edmund E. Benjamin, a well-known dealer in chemical and pharmaceutical apparatus, died at his residence in New York on May 29, 1894. We append a brief notice of his career written by his son.

Edmund Burke Benjamin was born in East Bloomfield, N. Y., July 16, 1828. He was the second son of the Hon. Orson Benjamin, for many years Judge of the Probate Court, Ontario County, N. Y., and from whom he traced his descent back to John Benjamin, who settled near Boston in September, 1632. His great-grandfather, Capt. Nathan Benjamin, served in the war of the Revolution. At an early age he moved to Canandaigua, then one of the foremost towns in central New York, and received a classical education at the academy there. His father's family was a large one, and he left home when he was 16 to become a clerk in Rochester. Thence he went to Elmira, and finally to New York city. In 1854 he went to California, and was soon successfully established in business in San Francisco. After several ventures he became junior partner in the firm of Cameron, Whittier & Co. (now Whittier, Fuller & Co.), then and now the largest dealers in paints, oils and window glass on the Pacific coast. Falling health led to his withdrawal from active business in 1887, and he returned to New York. After two years spent in travel in Europe he purchased the business of G. Quettier, the oldest dealer in chemical and druggists' glassware in the United States. Under his management the business rapidly developed, and he soon numbered among his customers all of the larger colleges and universities in this country.

His enterprise manifested itself in the publication of a large cloth-bound catalogue in 1872, fully illustrated, which was the first of its kind issued in the United States. In 1876 his large exhibit at the World's Fair in Philadelphia received the only medal for similar wares. For twenty years his business remained the foremost of its kind, but toward 1890 his health again began to fail. Thereafter he was unable to give his attention satisfactorily to his affairs, and after seeking in vain for relief at the baths in Bohemia he withdrew entirely from business.

He was a prominent member of the Protestant Episcopal Church, and a liberal giver to its charities. For many years he was a fellow of the American Geographical Society and a member of the American Association for the Advancement of Science.

M. B.

Kansas City (Mo.) College of Pharmacy has appointed H. C. S. Hines of Independence, Mo., to fill the chair of materia-medica in that institution, recently vacated by Dr. Emory Lanphear. Dr. Lanphear removes to St. Louis to become professor of surgery in the College of Physicians and Surgeons.

NEW YORK.

New York, June 9.—Two gentlemen, wholesale druggists, rode downtown in an elevated train one morning last week—Saturday morning. One of these druggists came from Chicago, the other was a New Yorker. Each had a morning paper in his hand. They had not opened the newspapers, but were talking "shop." Said the Chicago man, "I know you New Yorkers are pushers, but you have no local pride. You care nothing for anything that is outside of your business."

"What are you talking about?" was the reply. "Why, we New Yorkers take just as much interest in local and national good government as you Chicago people." "Well, perhaps as individuals you do; that is, you go to the polls and vote on election day if you have the time and it doesn't rain. But now, as a business man, do you lend your firm name to reform movements; does the drug trade here take any side in local or national questions?"

"I think we do. In fact—well—perhaps I can't cite a case offhand, but we've got just as much interest in that sort of thing as any body of business men elsewhere."

The Chicago man smiled, but said nothing. Both opened their papers. Naturally, the first thing that caught their eyes was the report of the income tax meeting. Both began to read the story of the big protest at Carnegie Music Hall. The Chicago man looked down the many columns, then returned to the first page and skinned his eye down again. When he got to the end of the story he said "Humph," and with a shake of his head repeated his performance. His actions had attracted the attention of his friend, who finally asked, "What's the matter?"

"So you drug men are interested in all public questions, are you? Just find me a name, one single name, if you please, of a drug firm or a drug man in this city who was represented at the meeting at Carnegie Hall last night."

The New Yorker grabbed his paper and went through the report. He couldn't find one name. There was a great string of vice-presidents, many men had spoken, the banks, the insurance companies, the dry goods houses, the hardware people, all had been represented there, but, alas, not one drug man nor one drug firm was mentioned.

The Chicago man chuckled. The New Yorker crumpled up his paper, deposited it under the seat and wrapped himself in thought.

Perhaps it is unkind to continue on this line, but, really, have the drug trade men of this city done themselves credit? Have they, as a body, any interest in the great public questions of the day? If so, why on this occasion was it not shown? It cannot be possible that the drug men have no reason to worry over an income tax. It would be nothing short of an insult to suggest such a thing. The drug men are interested in that proposed tax, but they were not enterprising enough, public spirited enough to show it. Why not wake up.

Of what use is it to say that the Chamber of Commerce did not send an invitation to the drug section of the Board of

Trade to join in the protest? The drug men might rise above such neglect. A representation from the drug industry, one of the most solid, influential, when needs be, branches of trade in this city, would have been received with open arms. You know that. Isn't it a fine reflection on that splendid industry, therefore, to let reports be spread broadcast over the country of what action the bankers, the insurance men, the dry goods merchants and the hardware dealers, yes, even the hardware dealers, have taken on this question in the great city of New York, and not even a little mention of the drug trade? Will the antiquarian of the year 2900 say "there was no such thing as a drug man in 1894, for the public prints mention him not."

You will not find a man in the business but will admit that the drug trade business man takes little or no interest in anything outside of his shop and his home. He is absorbed in his own work, and prides himself on knowing how to attend to his own business and letting other people attend to theirs. But must it be said that as citizen he is worthless?

Words of praise continue to pour in regarding the excellence of the "Moving Day Number" of the Era. The best of all this praise is that which tells of increased business resulting from the advertisements in that splendid 40,000 edition. The Era man yesterday went into the office of Cushman Bros., the agents for manufacturers, on Hudson street. While there he was told that the firm was receiving letters from all over the country asking about their system and terms of business. Some of these letters came from Florida and California, and all were directly traceable to the advertisement and notice in the May Era. As a sample of the work the firm is doing, it may be said that in the month of May they sent out four carloads of Tanglefoot fly paper to points in and near this city. This, they think, is the largest quantity of that line of goods ever sent out within thirty days.

Some of the "boys" may want to know what the prospects for the next year's bowling tournament are. At present it is the idea that the season's bowling should begin about the 1st of October. If possible there should be twelve teams, six more than this last season. There seems to be little doubt that McKesson & Robbins will not have a team, but there is lots of time between now and October. However, even if they drop out there is a fair prospect of seven new teams, and the tournament ought to be a "hummer." All the prizes won in the recent games are now in the hands of the winners except in one case, and the team seems to have no desire to hurry in the matter. Mr. Sayre has the money and the team can get it when it wants it. If the association secures twelve teams next year the writer knows of at least one extra prize that will be offered. Particulars will be given later.

At the meeting of the New York County Branch of the Interstate Retail Druggists' League on June 1 officers for the ensuing year were elected as follows: President, A. M. Roney; Vice-President, T. J. Barnaby; Secre-

tary, T. O. Morrison; Treasurer, M. F. Bender, directors, Oscar Kress, Ernest Molwitz and O. C. Weinman. The branch will meet only once a month during July and August. A. C. Searles, Charles Osman and T. J. Barnaby were selected delegates to the Saratoga Convention of the New York State Pharmaceutical Association. Quite a number of new members were announced. On motion of T. B. Breen, the popular druggist at 2300 Seventh avenue, the following was adopted:

"Moved that Mr. Rontey communicate with President Canning stating his views as to the means which in his opinion will be most likely to bring about the accomplishment of the league plan, and requesting the national body to issue explanatory circulars of the plan for distribution among the entire retail drug trade of New York city, this being necessary in view of the fact that very few of the members are well posted regarding the details of the league platform." The new officers will be installed June 15.

Seabury & Johnson are to put in new machinery at their factory shortly.

Yancey Bartholow, vice-president of the Texas Drug Company, Dallas, Tex., was a visitor at The Era office on May 31.

Paul Monlux of the Deletrez Company sailed for Europe a week ago. He goes to Paris.

P. J. Torney, agent for W. H. Schiefelin & Co. in San Francisco, returned home on June 7.

Dr. Charles F. Chanlier of the N. Y. C. P. sailed for Europe on Saturday, June 2.

The German Apothecaries' Society will have its picnic some time this month at Lake Hopatcong.

Mr. Heebner, proprietor of a drug store at Lee, Mass., was in town the other day making calls on a number of friends.

S. D. Wadhams of W. R. Warner & Co. is doing Long Island. He will attend the State Pharmaceutical Association at Saratoga.

Brent Gool of the Carter Medicine Company and John W. Cox of the Antikamnia Company sailed for home on the 6th on the Germanic.

Peter R. Lance was in Cincinnati this week. He writes The Era that he had heard many pleasing comments on the "Moving Day Number."

Charles R. Parmelee of the E. M. Johnson Company is attending the Kentucky Medical Association at Shelbyville. He is expected back on Monday.

H. & H.'s note about the Drug Clerks' Club was received. Up to the present time all the replies to the notice have been favorable, but not numerous.

Dr. Arthur H. Elliott, Professor of Chemistry at the New York College of Pharmacy, has moved into his new house at Poughkeepsie for the Summer.

R. D. MacLeod, manager of the Boston house of the Whitney Glass Works, sailed for Europe last Wednesday. He will remain abroad for about ten weeks.

Oscar Goldman, who conducted a pharmacy very successfully at 165 Rivington street and who was recently married, has bought an interest in the firm of Englehardt & Huber, succeeding Mr. Huber, who will retire from the drug business.

O. F. Fuller, head of the Chicago house of Fuller & Fuller Company, was a visitor here last week. He came East on private business, and only remained a very short time.

Edward J. Bromberg, who formerly traveled for Beach & Clarridge of Boston, now has charge of the laboratory of E. P. Francis' bottling establishment in Fall River.

Unintentionally the name of Frank J. Herbig was omitted from the roll of honor of the graduating class of the New York College of Pharmacy in the account printed recently.

John McGarigle of Perry's Pharmacy, Sun Building, took a three days' trip down East last week. He visited Boston, Providence and Fall River and renewed many old friendships.

J. M. Grosvenor & Co. of Boston have sold to Johnson & Johnson the right to manufacture and sell Bell-Cap-Sic Plasters, but still retain the ownership of the trade-mark.

Dealers in druggists' sundries report an increased demand during the last two or three weeks. While not enough to cause anybody to go into ecstasies, this sign of improvement is certainly encouraging.

John Hollander, 18 years old, who claimed to be a clerk in a drug store, was fined \$10 in the Yorkville Police Court this week for disturbing a meeting of the Salvation Army.

One of Seabury's & Johnson's customers received the following order the other day: "Seabury's sulphur candles, disinfecting and death to all animals, from a chimpanzee to a nigger."

Joseph E. Cotty, managing director of Mansell, Hunt & Cotty Company, London, England, who has been making an extended trip in this country, sailed for home on the Umbria, June 9.

One of the happiest men in the trade who visit this city is Frederick B. Perry, the representative of Powers & Weightman. He is in town at present, and, as usual, has something pleasant to say to everybody.

W. Townley Case, traveling representative of C. F. Boehrlinger & Soehne, is here for a few days. Everybody is glad to see Mr. Case when he comes in from his trips, and the only regret is that he cannot stay in town longer.

The druggists of Brooklyn are glad the New York and Eastern Telegraph and Telephone Co. will be allowed to put its lines in that city. Perhaps now there will be some relief from the past outrageous conditions.

A Harlem druggist who has been in business at his present place for about a year says the month of May was the best he ever knew in the matter of receipts. There are very few druggists, however, who say the same.

R. R. Wanless has purchased the drug store at 322 Ninth avenue formerly kept by Pryor & Cameron. The latter will now devote their entire attention to their other store at the corner of Broadway and 54th street.

The chairman of the Committee of Arrangements for the Asheville (N. C.) meeting of the A. P. A., is receiving many inquiries about rates, transportation, etc. The attendance at the convention bids fair to be large.

B. R. Cowgill of 143d street and Eighth avenue has sold out his store to F. A. Oettel, who was formerly with Elmer & Amend, at the corner of Third avenue and 18th street. Mr. Cowgill is looking around for another store.

Charles Stern of Charles Stern & Sons, the wine merchants of 14 and 16 Vesey street, will return to Los Angeles in a day or two to superintend the erection of additional buildings at his plant. These are to be ready for use by September.

Prof. F. J. Wulling, dean of the College of Pharmacy, University of Minnesota, was a caller at the Era office on Thursday last. He called for Europe to-day and will visit the various educational centres of England, Scotland, France and Germany.

The New York agent of the Low Art Tile Company has placed new fountains with James Dody of Basking Ridge, N. J., and with R. R. Wanless, 322 Ninth avenue. A Low fountain will also be put up in the new pavilion at the East 23d street ferry.

Conrad B. Lee of the J. Ellwood Lee Company of Conshohocken, Pa., was in this city last week closing a large contract for one of their patented articles. Mr. Lee said that his firm was adding a large absorbent cotton plant to its factory.

William H. Schmidt, formerly with A. Klefer & Co. of Indianapolis, was best man at the wedding of his friend, John T. Brush, the baseball magnate, at Dr. Robert Colyer's church on June 6 at 11 a. m. Mr. Schmidt was a thing of beauty to gaze upon.

The Monatsblatt of the New York German Apothecaries' Society made its appearance during May and was well received. Dr. Hoffman of the Rundschau gave it a very nice notice and one thoroughly appreciated by those who are in charge of the Monatsblatt. Success to it.

M. B. Krappe and J. A. Koellner, two members of the German Apothecaries' Society, and old-time druggists, died recently. Mr. Krappe had been in this country for twenty-five years, during all that time conducting a druggist's business, and Mr. Koellner has been on this side for forty years.

John Hodge, the newly elected Grand Master of the Grand Lodge of Masons of this State, is the secretary and general manager of the Merchants' Gargling Oil Company of Lockport, N. Y. He is very well known and liked in the drug trade, and is receiving congratulations on the honors he has received.

A. M. Tenney, the Ninth avenue confectioner, has brought over from Paris what it is believed will prove a very popular Summer drink. It is called "Cassis," and comes in the form of an extract of peculiar and delicious flavor, slightly resembling that of the American black currant.

Emil Utard, representative in this country for Ed Pinlaud's products, is to sail for Europe on La Bourgoigne June 30. His sister accompanies him. M. Utard goes to Paris and to Strasburg, his home. He will be absent about two months, and will be represented here meanwhile by his brother, Henry Utard. M. Utard makes yearly trips home, and all his many friends hope this excursion will be the most pleasant of all.

Dr. Henry H. Rusby, professor of botany at the New York College of Pharmacy, was consulted in regard to the root that caused the death of those five boys at Tarrytown this week. He pronounced it to be the poison of Socrates, water hemlock, scientifically, *Cicuta maculata*. Dr. Rusby says the marsh lands all around New York are full of this herb.

W. F. Rawlins, proprietor of the drug store at the corner of 135th street and Eighth avenue, is a Philadelphia College of Pharmacy graduate. Of his assistants C. P. Bolson is a N. Y. C. P.; James Bingham, who was formerly with Mr. Rawlins, was graduated with this year's class of the New York College. He is now at Glens Falls with Leggett & Petty.

Dr. Vredenburg of New Brighton, S. I., is erecting a very handsome five-story building on the terrace at the corner of York avenue. It will cost in the neighborhood of \$30,000, and will be an ornament to the island. The workmen will complete the job in about a month. The drug store will be on the corner, and will be especially large and completely equipped with all modern conveniences.

Detail work in relation to the coming meeting of the N. W. D. A. goes on rapidly, the subcommittees finding that they can keep busy perfecting arrangements during all of their spare time. There has been no formal meeting of the committee since the last report in The Era, but the members see each other from day to day, and never neglect an opportunity to add a finishing touch to work already practically completed.

The druggist is a long-suffering and patient man. His store is often the death place of the victims of accidents and of the self-destroyers, but it is to be hoped that Druggist George K. Campbell of Montgomery street, Jersey City, will have a monopoly of his peculiar affliction. Within the past year ten couples desirous of being "hitched" for life have rushed into his store and asked for a minister. The last occasion of this sort was on May 27.

To be obliged to defend a suit in court when you and others know that the complainant is wrong, is a source of worry and expense. In a communication a druggist gives some facts about a case in which a woman sues because she was given insect powder instead of compound licorice powder. The druggist had witnessed to prove that she asked for insect powder. Of course the case will probably be thrown out of court, but the druggist will have to pay for his defense.

The Low Art Tile Company of Chelsea, Mass., has just set up for the Hudnut Company of 205 Broadway one of its most important constructions in the soda fountain line. Its dimensions are twenty-four feet in length and twelve feet in height. In design and color it is a most harmonious piece of decoration. Its effect is heightened by an extremely elaborate serving counter, also constructed of art tiles similar in design to the Low exhibit at the World's Fair. Druggists will have an opportunity to see the amount of decoration that can be obtained by the company in its fountains by dropping in at Hudnut's, and they can also see something of the working qualities of the mechanical parts.

L. Glaeser has opened a new drug store on Bergenline avenue, Union Hill, N. J. Mr. Glaeser was for many years a druggist, but about five years ago gave up the business, with the intention of keeping out of it for the rest of his life. His many friends in the trade are glad to see him behind the counter again.

A well-read and very bright man passed away when Dr. Kennedy of the Protinal Co. died. He was with W. R. Warner & Co. for about four years, and three years ago started the Protinal Co., becoming its president. His office was at 163 William street, and as he was well known to traveling men all over the country, they never visited New York without calling on him. His popularity was marked, and his death created genuine sorrow wherever he was known.

There was quite a flurry in the chemical market the first of the month, owing to the sudden decline of a number of important staples. Among them may be specially mentioned muriate of cocaine, salicylic acid, chloral hydrate and salol. The drop was considerable. It is hard to assign a cause for the reduction in prices. "Many believe," said a dealer, "that the contemplated changes in the tariff schedule affected these articles and also the idea that the bill will surely become a law."

J. A. Sangston is no longer connected with the New York salesroom of the Low Art Tile Co. He severed his connection with the office this week, and G. M. Howell is now in entire charge of this end of the business. Mr. Sangston, it is understood, has gone to the head office of the company, and may possibly be seen in some other territory for the same concern. Mr. Low was in this city during the week and also visited Buffalo. He is a thoroughly representative Boston business man and a pleasant gentleman.

John M. A. Laue, president of the Laue-Davis Drug Co. of Portland, Ore., was seen in this city this week. Mr. Laue has much improved in health and spirits since his business took him out West. He has been away about fourteen years, and has been more than usually successful. Mr. Laue's brother owns a drug store in Passaic, and is about to make an extended trip to Europe. While he is away his brother will attend to the business of the Passaic store. Mr. Laue reports that business is not nearly so bad out on the coast as it is here.

When George E. Shiels, the druggist at the corner of 12th street and Broadway, died this past Winter, it was almost certain that his store would have to pass into other hands than the family's. Mr. Shiels' patronage was of such a nature that nobody else could carry on that store successfully. He was so well known that many friends came or sent from a distance to get him to compound a prescription or to secure some article in his line. The personal element was consequently a big one in his business, and it was well for him that such was the case. The change in the character of his surroundings as regards trade would long ago have sent him uptown, but for this personal following. So it is not surprising

that when the store was sold the other day by order of Albert Shiels, the executor, nobody bought the place outright with the intention of continuing the business. The sale of stock and fixtures took place on Monday last at 11 o'clock, terms cash. The amount of stock on hand was surprisingly large, three floors being filled, and everything was disposed of. Albert Shiels said it was a fairly successful sale considering the state of business and the terms of the sale.

The investigation made by M. Emil Utard in the matter of fraudulent imitations of Ed. Pinard's perfumes upon the Pacific coast, mentioned in the last issue of The Era, has taken definite shape by the institution in the Superior Court at San Francisco of suits against Edward Meeks, a manufacturer doing business under the name of the Ideal Perfumery Company, and two dealers, Goldstein & Cohn and a Mr. Kline. Many other druggists who are known to have been handling the bogus preparations have been requested to cease their sale, and give an undertaking, secured by bond, not to handle imitations in the future.

Walter Boston, the night cashier of Perry's Pharmacy in the Sun Building, celebrated his twenty-first birthday a few days ago. Among the many tokens he received was a gold scarfin representing a hare holding a diamond. Accompanying the gift was this effusion—unfortunately no name was attached:

"Should you grow bald
From 'love' or care,
Remember I
Gave you a—hare."

"Walter" is popular with the boys on Newspaper Row. He declares that the author of these touching lines deserves to rank with the "Sweet Singer of Michigan," Bloodgood Cutter, the farmer poet, and other famous versifiers of the day.

When a bull pup attempts to surround a Turkish towel, he furnishes all the necessary elements for both a tragedy and a comedy. The comedy is usually of the curtain-raiser sort, short and side-splitting, and is quickly followed by the sadder but more instructive Bernhardtian piece de resistance. Nobody who has not seen a pup swallow a towel of the Turkish variety can understand how funny it is. Druggist Edward Foerster of Bedford avenue, Brooklyn, had a bull pup and the animal did this very thing. Mr. Foerster missed the towel, and was unable to even surmise where it had gone. His dog "Skeesiks" knew, but refused to state. After the pup had given his little performance to a select but interested audience, Mr. Foerster investigated the interior of the foolish brute, and there found the rough cause of the excitement. An odd summary of this distressing affair may be made as follows: Mr. Foerster was "out" a towel; the pup was "in" a towel; the towel was in a dog. So, really, Mr. Foerster had not lost anything, having both his towel and his dog. Then the towel was out of the dog; the dog was out in Newtown Creek and Mr. Foerster was in a towel; out a dog and won't have to pay a license tax on the animal this year. The question comes, How stands Mr. Foerster, is he "out" or "in"?

BOSTON.

Boston, June 9.—Druggists in Boston who run two or more drug stores will get but one liquor license this year, and it will carry with it permission to sell liquors in but one of the stores. There are twelve such among the applicants for sixth-class licenses. Before coming to a decision on the point the Police Commissioners wrote to the State Board of Pharmacy asking whether duplicate certificates of registration are given to druggists having stores in different parts of the city, and whether a clerk's certificate displayed in either store is sufficient reason for granting a license. The Board of Pharmacy answered no to both questions. Chairman Whitney of the State Board of Pharmacy said: "A certificate of registration is required for a license. That is clear enough. The board cannot grant duplicate certificates according to law, and, of course, has no disposition to do so. In section 8 of chapter 313, acts of 1885, the wording is: 'Every person who has received a certificate of registration from the board shall conspicuously display the same in his place of business.' He cannot display it at but one store, and therefore only one should be licensed, according to our interpretation." Police Commissioner Whiting said: "Applicants for sixth-class licenses must be bona fide proprietors of stores. A clerk's certificate will not go unless it can be shown that the man acting as clerk is also an actual partner."

Harry Niles, a young drug clerk in Somerville, was arrested the other day, charged with the illegal transportation of liquor. He was arraigned in court and pleaded not guilty. The case was continued. The peculiarity of the case against Niles has aroused much interest. He was arrested for the violation of that section of the Public Statutes which reads: "No person shall bring into a city or town in which licenses of the first five classes are not granted any spirituous or intoxicating liquor with intent to sell the same himself, or to have the same sold, by another, or having reasonable cause to believe that the same is intended to be sold in violation of the law; and any liquor transported contrary to the provisions of this section shall be forfeited to the Commonwealth; but this section shall not apply to the transportation of spirituous liquor through a town to a place beyond." The policeman who made the arrest acted under the supposition that the boy was transporting liquor which was to be sold in Willard's drug store, where he is employed. Mr. Wilken, manager of the store, says that the boy did not know what the hand bag which he was carrying contained.

Some time ago the Aldermen of Newton received a strong remonstrance from sixty prominent citizens at the Upper Falls against the alleged injustice of refusing license to the druggists of that place, and petitioned that they be granted. There was some expectation that the board would act favorably, but the aspect of the case was changed somewhat by a hearing given the other night on the petition of Bernard Billings for a sixth-class liquor license for his drug store at Upper Falls. Fifteen persons appeared at the

hearing and remonstrated against the granting of the license, and Charles Andrews, 10 years of age, testified that he had been engaged to carry liquor from the store to many people in the neighborhood. Dr. McCoy, one of the remonstrants, was particularly bitter in his denunciation of any attempt to secure license. From his patients he had learned that the husbands and sons of families had been frequently intoxicated from liquors obtained at the drug store of Mr. Billings. He stated that his practice often detained him out late at night, and upon several occasions when he had been so detained he had seen gangs of men issuing from a room directly over the drug store, from which access could easily be gained to the former. Other speakers also made strong speeches in opposition.

Since the Malden Aldermen refused to grant licenses to druggists there has been considerable talk about the right of druggists to keep liquor for the compounding of medicines, and it has been asserted that they have a perfect right to do so, provided that the quantity kept is not in violation of law. But there is no law fixing the limit of the quantity which may be kept. The liquor must, however, be actually kept, and not disposed of either as an ingredient in a bottle of medicine or in any other form. Now, the druggists of Malden are disinclined to take any chances on this nice point, and many of them have removed all liquor from their stores. They will have to receive some assurance of protection from the city authorities before they will risk keeping liquor on their premises in violation of law.

A successful move against the liquor-selling druggists of Salem was made last Saturday evening, the police raiding three places and seizing several hundred bottles of lager, many cases of wines and English ale and about 150 gallons of hard liquor in kegs. The places visited were the Boston Street Pharmacy, kept by Dennis, Hartnett & Co., and the Charles Ospeas Drug Store, corner of Boston and Watson streets. The raids are the talk of the city, as the places have been doing a rushing business for several months. When the Aldermen met the following Tuesday it was voted not to grant licenses to druggists this year, Alderman Flynn dissenting. Mr. Flynn said that the board could not legally act on the license question, as no advertisement had appeared in the papers that action was to be taken.

C. H. Woodman, druggist, Haverhill, has assigned.

S. A. Emery, druggist, Northborough, has failed.

S. Harding Holbrook of Lynn has bought a fountain of Tufts.

Dedham druggists are now forbidden to sell soda or cigars on Sunday.

W. A. Torrey of Braintree has just been granted a druggist's liquor license.

George W. Brush of Williamstown, Vt., has bought a new soda fountain of Tufts.

R. T. Crane of Machlas, Me., was in town with A. W. Bowker of Brookline April 16.

C. I. Hood of Lowell has purchased the World's Fair prize winning Jersey cows. Merry Maiden and Brown Bessie.

Burglars have stolen about \$50 in cash at the drug store of H. P. Thompson, Lewiston, Me.

A. Millar Pollard of Somerville has accepted a position in the drug store of Woodward & Co., Tremont street.

The police of Chelsea seized a small quantity of liquor at the drug store of James R. Cook, 819 Broadway, the other day.

Woodward Brothers of Ellsworth, Me., have opened a new drug store in that place, and have bought a Tufts soda fountain.

Damage of perhaps \$200 was caused the other day by a fire in the drug store of George E. Burrell, druggist, 175 Boylston street.

The Selectmen of Uxbridge, after a three-hour debate, refused to grant sixth-class licenses to all three druggists in the town.

An attempt was made some nights ago to enter the drug store of Stephen A. Pierce, Quincy. Mr. Pierce frightened the burglars away.

Preparations are being made at St. Johnsbury, Vt., for the formation of the Azte-Zone Chemical Company, with a capital stock of \$10,000.

J. G. Godding, druggist, 275 Dartmouth street, is among the citizens whose views on the need of rapid transit in Boston have been considered good enough to be published in the daily papers.

It seems that it was not Mr. Chesley, the missing Rosindale druggist, and Mrs. Munz who returned by boat to Boston. At last accounts the pair were "doing the Paul Jones act" in the northern part of Maine.

The trial of Philander B. Hall, formerly a drug clerk in Malden, who was charged with the larceny of a watch from a young lady in Warren, took place recently and resulted in a complete exoneration.

Elijah Hughes of Williamstown has been fined \$100 and costs for selling Jamaica ginger. The authorities found that 33 per cent. of some of the Jamaica ginger was alcohol. Mr. Hughes, on being convicted, appealed.

H. S. Garcelon, druggist, Studio Building, West Somerville, has recently put into his show window a new-style arrangement for displaying goods, consisting of several glass shelves, supported by nickel-plated rods and standards.

At Gloucester the Aldermen decided to grant all but five of the applications for druggists' licenses despite the objection of Mayor Cook that action could not legally be taken by the board, as the bill creating the License Commission had become a law.

Luther W. Easton, a Rockland druggist, was found dead in a chair in his store on the evening of June 5. Heart disease was the cause of his sudden death. Mr. Easton was well known, being a prominent Odd Fellow. He had a wife and six children.

Police of Lewiston, Me., are beginning to look after the saloons which masquerade there as drug stores, and the other Sunday the City Marshal ordered all places not having a registered druggist to remain closed during the one hour allowed for business.

According to the monthly report of the State Board of Health the samples of drugs found to be adulterated were chlorine water, chlorinated lime, spirits of juniper and tincture of iodine.

A. F. Woodbury, for ten years manager of Bird's Brookline Pharmacy and for two years at the College Pharmacy, Northampton, has opened a store of his own at Shelburne Falls.

As the Malden Aldermen have refused to grant sixth-class licenses, it is said that a druggist to whom a man took a physician's prescription for a half pint of whisky not only refused to fill the prescription, but telephoned other druggists not to do it.

Hon. Gorham D. Gilman of Gilman Bros. has received a commission as Hawaiian Consul at the port of Boston for the Provisional Government, and is prepared to attend to any business in which his services may be desired. His appointment was actually made ten months ago.

Elias Carpenter & Co., have bought the old H. J. Watson store, 31 Aborn street, Providence, R. I. This store was moved to that city from New York, and in its day was the finest in Providence. Mr. Carpenter is refitting the store and has put in an onyx and white and gold soda fountain of Tufts' make.

F. A. Woodbury, who recently sold out his establishment at Maverick square, East Boston, is back at the old stand clerking for D. A. Eaton & Co., who bought him out. It is said that a few weeks of idleness were all that he could stand. The firm is to be congratulated upon securing so good a clerk.

When the Massachusetts Medical Society holds its annual meeting in Boston next week for the benefit of the visiting physicians the students of the Massachusetts College of Pharmacy will prepare an exhibit of crude drugs and preparations of the United States Pharmacopoeia, to illustrate the revised edition of 1890.

Woburn, Stoneham and Winchester druggists have organized an association for the purpose of promoting good fellowship and regulating prices. These officers were chosen: President, R. C. Evans of Winchester; vice-president, W. F. Gordon of Stoneham; secretary, F. T. Brooks of Woburn; treasurer, R. S. Walton of Stoneham.

The other afternoon a man went into a Boylston street drug store to buy some quinine. He threw down a quarter, and, taking the box of pills, went his way. Before he had reached Berkeley street he was stopped by a boy, hatless and breathless, who said: "Here, sir, is your change. Mr. Durkee sent it." The "change" was 10 cents, and the boy had run a block to return it to the purchaser, who did not know there was any "mark-down" sale going on.

Sessions of the Board of Registration in Pharmacy were held May 22, 23 and 24, at which forty-three were examined. Certificates were granted to Simeon A. Flynn of Boston, Joseph A. Prescott of Marlborough, Frank W. Sinaud of Marlborough, Joseph Brin of Springfield, Harry B. Cleveland of Boston, Oscar C. Goddard of Boston, John H. Blanchard of Boston and William S. Briny of Bath, Me.

The long-established drug business of Dr. Benjamin Hubbard of Plymouth was being purchased by the doctor's son, L. P. Hubbard. Dr. Hubbard does not retire from medical practice. The new proprietor of the old shop intends to keep a first-class pharmacy. A special feature will be the introduction of an assistant speaking the German language.

Two business men of Charlestown were convicted in court last week for violation of the public statutes enacted to protect the owners of cans, bottles, boxes, siphons and fountains used in the sale of milk, cream, soda water, mineral and other waters, ale, beer, ginger ale and other beverages. These two convictions will serve as a warning to other bottlers and junk dealers, as the Manufacturers and Bottlers' Association intends to enforce the law to protect its members.

Charles Nichols, prescription clerk for Bisbee B. Merrill, Brewer, Me., met with a painful accident while playing bill. One of his hands was struck with a pitched ball, dislocating one of his fingers and cracking a bone in his hand.

Judge Peabody of Portland, Me., has lately heard the evidence in the case of the Freeman Rice Medicine Company's petition for the appointment of an assignee. There are about \$3,500 claims against the company. Col. George F. McQuillan and Fred V. Chase were appointed assignees.

The customers of at least one druggist in Somerville will not be endangered in cases of serious emergency by refusal of the Aldermen to grant druggists' liquor licenses. R. J. Willis, formerly of Willis & Multhead, who has just opened a new store at the corner of Medford and Sycamore streets, says that, as he cannot sell brandy or whisky, even in cases of emergency, whenever he knows of such cases, and knows that the persons who call for the liquor are honest, he will give it to them with his compliments. He intends to keep a small quantity in his safe or locker for that purpose.

At Newport, R. I., the stock, fixtures and equity in the building of Hazard, Hazard & Co., druggists of Newport and New York, have been attached in the interest of John R. Caswell of Caswell, Massey & Co. of New York and Newport. The claim is said to be for \$25,000. Both firms are the outgrowth of the old firm of Caswell, Hazard & Co. Hazard, Hazard & Co. occupy the old place in Newport and did not drop Caswell from the firm name until after long litigation. Since the division of the firm there has been friction.

At Everett last Sunday a meeting was held under the auspices of the International Religious Liberty Association, at which George E. Fifield declared that the order of Mayor Batchelder, in not allowing druggists to sell articles other than medicines, was not in keeping with the sentiments of the American people. The law was unconstitutional and unpatriotic in a country which boasted of its religious liberty and its freedom to all. The speaker claimed that no man or combination of men had a right to make laws which inflicted a hardship on their fellow men, or which prevented them from getting on Sunday what they were in the habit of having on the other days in the week.

PHILADELPHIA.

Philadelphia, June 9.—The subject of "Box and Cartage" is now being considered by a committee of the Philadelphia Drug Exchange, and by the time this letter is printed the committee will have made its report to the Board of Directors, and they in turn will have submitted it to the National Wholesale Druggists' Association. It was learned that the report will state the inability of making a change in the manner of conducting the business at this late date. It is contended that it would be almost impossible to get the consent of all the manufacturers and dealers to charge for the "boxing and cartage" of the goods to the various customers. It is also said that if a dealer transports free of charge the goods bought by a city house it is not more than fair that he should do the same to the buyer who lives along the line of a railroad. That is, the goods should be delivered free at the freight station. A member of the committee said: "If all the manufacturers and dealers should sign an agreement to charge for boxing and cartage it is not certain that the buyer would pay for them, and it is more than likely he would run his pen through the charges and let it stand at that. Maybe some of the dealers would consider this living up to the agreement, and would take any step to enforce the payment of such charges, while on the other hand some dealer would make it an object to secure trade by some trick so well known to sharp business men. The custom of sending the goods free, including the boxing, has been too long in vogue to make any change, and it is not considered possible and feasible by the majority of the druggists in this city."

H. G. Eakin has bought the drug store at Sixth and Vine streets, formerly conducted by Charles A. Eckles.

Long & Neely have recently transformed their store, and added an immense soda water fountain, which is making things lively.

Frederick Quackenbush, a graduate of the class of '90, P. C. P., will be married to Miss L. W. Simmons of Redley Park on June 19.

H. C. Frederick, formerly with W. P. Moore, and recently at 10th and Green streets, is now representing Hance Bros. & White.

Daniel Kunkel has removed his drug store from Howard and Hancock streets to Third and York streets. The location is far better than the old one.

James H. Munson, who owned the drug store at 24th and Lombard streets, died on May 21. He was 29 years old, and was well off in worldly goods. He died of paralysis of the heart.

Harry B. French has turned over to the congregation at Rosemont the very pretty, unique chapel which he has had constructed in memory of his wife. On May 27 appropriate services were held.

Schandelin & Lind, manufacturers of Garwood's standard perfumes, have just completed their holiday goods. They have established a Chicago office, with Austin F. Remsen in charge, at 145 Wabash avenue.

Bullock & Crenshaw have notified all their customers that in order to allow their employees recreation during the Summer months, the store will be closed every Saturday at 12 o'clock, between June 1 and Sept. 15.

Dr. H. E. Wetherill, son of the member of the same name of the firm of Wetherill & Bros. of this city, has been chosen surgeon of the expedition which is going after Lieut. Peary in the Northern regions. Dr. Wetherill is at present resident physician of St. Christopher's Hospital, at Fourth and Hunnlingdon streets.

The last meeting of the Board of Trustees of the College of Pharmacy, before the Fall term opens, was held on Tuesday. It was reported that the Alumni Association had raised \$1,200 for the construction of the electric plant, and it was decided to have the same completed during the Summer months.

A few days ago Druggist Louis E. Barlow of Richmond and Barlow streets sold some chloral to John T. Wise, from which he died. At the Coroner's inquest Barlow was severely reprimanded for selling this drug. It appears that Mr. Barlow sold the drug to Mr. Wise, and because it was under five drachms he did not register the name of the buyer. After the deputy had given the frightened druggist a lecture he was allowed to depart.

The firm of Riswell & Co. have disposed of their store, at 13th and Market streets, to J. M. Hillan, who conducted a pharmacy at Shenandoah, Pa. Mr. Riswell retires from the retail trade, and in the future devote his time and attention to the manufacture and sale of his specialties on a more extended basis. During the past three years Mr. Riswell has materially increased the business, and leaves the store to his successor in a flourishing condition.

Charles H. Willis, a traveling salesman for Smith, Kline & French Company, died on June 5 at Warren, Pa. Mr. Willis was a former resident of this city, and before entering the firm of Smith, Kline & French Company was engaged in the same position with W. D. Elliott & Co., but when this firm sold out to Smith, Kline & French Company he went with them. Mr. Willis had charge of the northwestern section of Pennsylvania, and was well known in the Eastern States. He was born in Burlington, N. J., in 1832. A widow, two daughters and a son survive him. The funeral took place at Trenton.

The coroner held an inquest recently which resulted in Dr. Clinton Fritz, proprietor of a pharmacy at Tenth and Race streets, being severely censured for selling morphine granules to a drunken man, who swallowed enough of them to kill four or five men. Testimony was given to the effect that Fritz had sold the poison to the intoxicated customer while aware of his condition. Not only one sale was made, but several, until the man died. Fritz, it was admitted, neglected to register the sales, as required by law, and the transactions seemed to be of no more importance than if Epsom salts had been purchased.

Dr. Fritz attempted a defense by claiming it was not customary to register the sale of poison when it was taken by people from places of questionable repute, of which the victim was a frequenter.

The coal strikes and the wet weather have played sad havoc with the country trade of the wholesale druggists of this city. The floods have put a stop to shipping orders, and somehow there are very few coming in the mails. The collections are worse than ever, and customers complain that the flood has deprived them of their business, and until times improve the wholesale dealer must be lenient.

Professor Bastin is making excellent progress in refitting and enlarging the microscopical laboratory at the college. Two hundred fine microscopes have been purchased for the students' use. The quiz rooms on the fourth floor have been thrown into one large apartment for the accommodation of the laboratory, and plenty of light and elbow room have been secured in this way. The course in microscopy will, practically, hereafter be compulsory, for an examination on the subject will be added at the end of the terms, the same as is done in the pharmaceutical and chemical laboratories. This is one of the additional advantages to the student assured by the time allowed him in a three years' course, just established.

There is much good-natured rivalry among druggists of the city in fixing up attractive displays to catch the attention of the passing crowd. Evans' window at 1106 Chestnut street is always a pretty sight, and is now filled with fine Sevres lamps and dainty cups and saucers, specimens of what may be seen in the new department that he has added to his business. A unique display was made by Long & Neely at 12th and Chestnut streets. A large distilling apparatus, hard at work, caused a continuous crowd in front of the store. It was distilling the Geneva Mineral Water, with the object of showing how much mineral matter there was in the water. The result of the distillation was a heap of fine saltlike substance, which showed 249 grains to the gallon.

The new law, which compels all physicians and graduates of pharmacy to pass an examination by the State Examiners before they are allowed to register, is causing considerable trouble in this city. This law does not go into effect until the 1st of next month, but the Governor has notified the Prothonotary not to accept the registration fee of any graduate until he has passed the State Board of Examiners. This law does not matter much to the graduate of pharmacy, as he has always been compelled to go up before a State Board before he could conduct a drug business, but with the medical student it was different. All that he formerly required was his diploma from his college. A few days ago a number of graduates of some of the medical colleges of this city called upon the Prothonotary with the intention of registering, and for which they were prepared to put up their little dollar. The Prothonotary said "nay" and refused to register the new physicians. The outcome of the matter is that mandamus proceedings have been instituted to compel the Prothonotary to allow the graduates to register. It is thought that this move on the part of the "meds" will be taken advantage of by the graduates of pharmacy, as it is stated that there will soon be a move made to have the new law proved unconstitutional on the ground that the colleges that issue the diplomas are not chartered by the State, and that should suffice to allow the graduates to practice.

CHICAGO.

Chicago, June 9.—There is little new to be said of the situation in the drug trade. The cold weather has of course held business back. Collections are poor with most of the houses, much more so, in fact, than in March. Retail dealers do not expect a normal season's business. With the wholesalers it is somewhat different. They declare that while local business is much less than usual, the out of town trade shows an increase over former years, thus bringing the general trade nearly up to usual figures.

J. M. Keifer has put a Tufts apparatus in his new store at Peoria, Ill.

Dr. S. M. Harvey has opened a new store at 7032 Stony Island avenue.

Breves & Geisler have started a new drug store at 323 West 14th street. Charles Rice, 699 West Madison street, has been putting in new fixtures, etc.

J. L. Abt has sold his drug store, corner of Lincoln avenue and Diversey street, to W. W. Daniels.

J. F. Mikolasek has moved his drug store from 48th and Wood streets to West 47th and Page streets.

Dr. M. C. Kentland, a prominent druggist and physician of Kentland, Ind., is in the city for a few days on business.

F. J. Winkelman, formerly manager for Joseph J. Wolf of Peoria, is now with E. J. Knothe, 63d and Halsted streets.

J. Dell & Co., 278 West Madison street, are talking of opening a new store corner of Jackson Boulevard and Hoyne avenue.

The Hart Manufacturing Co. has sold a fountain for a new store just opened at Fort Madison, Iowa, by W. A. McKeenan. Calvert & Morgan moved last week from 447 63d street, Englewood, to corner of Evanston and Oakdale avenues, in Lake View.

The drug store of Charles T. Baring, 37th and Halsted streets, was burglarized the morning of May 25 to the extent of \$91.10.

E. Von Herman, the well-known druggist, corner 31st street and Michigan avenue, is on a business trip to Bay City, Mich.

The Feldkamp store, corner of Clark and Frederick streets, was bought at auction by Henry Schaller, who is now conducting it.

Scott & Jungk have bought a new tilting can Lippincott soda apparatus for the new store they are opening, corner State and 4th streets.

Gustave Nicolasse, the former manager of the Lincoln avenue store, is now at Oquaka, Ill., and will be there until he engages with some firm.

Scott & Jungk's new store, corner 4th and State streets, will be opened on June 18. The Quincy Show Case Company are putting in the fixtures.

Montgomery & Casper, corner of Dearborn and 26th streets, have opened a new store at 26th street and Portland avenue, but continue their old stand.

Axel Hulid recently bought the drug store of C. H. Achelpohl at 702 Lincoln avenue. The latter has just started a new store at Quincy, Ill.

W. E. Eggert, 5305 South Halsted street, started his neat little store at that number about four months ago. He is assisted by his brother.

R. E. Collins, one of the best known drug clerks on the West Side, is in San Francisco looking around with a view to purchasing a store in that city.

Parker & Sawyer, formerly of 1435 West Madison street, are now in business at Dixon, Ill., having bought the pharmacy of M. E. Donaldson of that place.

G. R. Schafer & Co., druggists and manufacturers of patent medicines at Marton, Ill., have just put in a Lippincott tilting jar soda apparatus.

Rogers Bros. opened a fine new store at 748 North Halsted street on June 8. Bletzinger & Dost furnished the fixtures, and a Lippincott fountain is being put in.

Adolph Kiessling is now in charge of the drug store formerly conducted by C. Vanderpool at 99 West 22d street, having purchased it about six weeks ago.

G. Krevatsky will soon move his store from 4822 Ashland avenue to the new building erected especially for him at the corner of 48th street and Ashland avenue.

Mr. Scarborough, Western manager for Charles Lippincott & Co., is meeting with great success in introducing the new tilting jar apparatus made by that company.

W. A. Venus, long established druggist at 781 West 12th street, is just making his debut as a soda water dispenser. He put in a \$2,000 Lippincott tilting can fountain a few days ago.

Joseph G. Wolf, who recently sold his South Adams street store, Peoria, to the Ryan Drug Co., on June 1 took personal charge of his store at 801 Lincoln avenue in the same city.

Emil A. Dornier, corner Schiller and North Clark, was married June 4 to Miss Mary Francis Tempel. They will be at home to their friends at 632 La Salle avenue after July 10.

The Western departments of the four great manufacturing concerns in the American Soda Fountain Co. are now located in the Earl & Wilson Building, Fifth avenue, near Van Buren street.

R. F. Bradford of Pontiac, Ill., is preparing to open a fine new drug store. The Quincy Show Case Company and the Fartt Manufacturing Company will aid in making the store a model of its kind.

C. W. Hallock, who sold his drug store, corner 33d and State streets, to Frank Howard about two months ago, is now in the business at Yorkville, Ill., under the firm name of Knudson & Hallock.

C. S. Ross has just sold his store at 1302 West Madison street to Frank J. Steker. Mr. Ross will go to the country for his health for a short time, but may return later on and open another store.

The Chicago branch of the Emerson Drug Co. sold over 100,000 bottles of bromo-seltzer last month. This figures up at the rate of over a bottle to every family in the city. (Chicago families average large.)

R. L. Wickes, formerly manager of the city department of Lord, Owen & Co., and who bought the old Garwood pharmacy at Evanston a few weeks ago, has refitted the store and put in a handsome \$3,900 Puffer fountain.

H. M. Feinberg, whose store, corner of 11ay street and Washington Boulevard, was burned last Winter, is back in the business again, having just purchased Mathiu Bros' store, corner of 14th street and Centre avenue.

Matthews Bros., proprietors of the West End Pharmacy, 247 West Madison street, closed the purchase of J. Hoembold & Co.'s store, corner Van Buren and Halsted streets, last Thursday, and will operate it in addition to their present stand.

Louis K. Waldron, pharmacist in the Briggs House, Madison and Fifth avenues, is in New York city fitting up a new store corner 14th street and Broadway, in the Morton House. Mr. Waldron will assume personal charge of the New York store.

Truax, Greene & Co. have recently put in a plant for the manufacture of compressed tablets. They have three compressed tablet machines made by the Orfelo Tablet Machine Co., and controlled by the Morley Drug Co., 57 and 59 Franklin street.

The successor to Wm. C. Amos as Western manager of the Winkelman & Brown Drug Co. has not yet been selected. G. T. Blomvelt of the Baltimore office is making the customary Western trip pending the installation of the new man, whoever he may be.

W. F. Mason, who recently purchased C. L. Felkamp's store, corner Diversey and Clark streets, at auction, is now devoting his whole time to its management. He has sold his pharmacy, corner Laflin and Van Buren streets, to Mr. Loerger, his former silent partner.

L. S. Phillips has just purchased the drug store of Schmidt Bros. & Co., at 71st street and Cottage Grove avenue. Mr. Phillips hails from Grinnell, Iowa. Schmidt Bros. & Co. will hereafter confine their attention to their paint, oil and drug business and real estate interests.

Oscar Petting's new store under the Farwell House, corner Jackson and Van Buren streets, is now open, and is unquestionably one of the finest on the West Side. The fountain was furnished by the Hart Manufacturing Company, and the fixtures by the Quincy Show Case Company.

Messrs. Searle, Hereth and Eastman of the Searle & Hereth Co. have gone to St. Louis to attend the meeting called by the committee on discounts appointed at the convention of the National Wholesale Druggists' Association at Detroit last year. After the meeting Mr. Eastman will return to Chicago, while Messrs. Searle and Hereth will attend the Missouri Pharmaceutical Convention and afterward visit the leading jobbers in Missouri and Iowa.

Luman T. Hay of Woodstock has just purchased a handsome onyx and mirror front cherry top Hartt fountain. He has been in the drug business in the same building in Woodstock for the past twenty-five years, and ever since its organization, ten or twelve years ago, has been secretary of McHenry County Druggists' Association. The association was formed to put a stop to cutting on proprietary medicines, which was then prevalent in the county, and was successful.

The annual banquet and meeting of the association occurs the second Wednesday in July. At that time a successor will be chosen to Dr. Wm. A. Mason, who has been president since its organization. Dr. Mason has retired from the drug business since the last meeting.

Dreuhl & Franken, formerly druggists of this city, are now in the business at Salt Lake City, Utah. Mr. Dreuhl was here recently, and said that the firm was doing a good business and is very much pleased with its new home.

Herron & Strohecker, 13 and 15 Jefferson street, became the Chicago agents for Buckett & Wright of Washington, D. C., on May 1, and report a good business in the pure fruit juices for soda fountain purposes made by this concern.

A. T. Hubke, owner of the building corner 19th and Halsted street, has just opened a new store in the corner room. He is not a druggist himself, but has placed a competent man in charge in the person of Ignatz Ode, formerly with Emil Fischeh. Mr. Hubke bought his stock of goods from Robert Stevenson & Co.

Mr. Colbert of the Colbert Chemical Company, proprietors of the new drug store corner of Dearborn and Monroe streets, says that business in the new quarters is exceeding his fondest expectations. They are making a specialty of standard and imported European clinical preparations, and are compiling catalogues for doctors' use.

Adams & Niles, agents for the John Matthews Apparatus Co. and James W. Tufts occupy the entire showrooms at 268 and 270 Fifth avenue, while Charles Lipincott & Co., H. Scarborough, Western manager, and the Western department of A. D. Puffer & Sons are at 264 and 266, respectively.

Fred Rudnick, president of the Illinois Drug Clerks' Association, says that although they have not yet received their charter from Springfield, they expect it very soon. There are twenty-five charter members. The souvenir they expect to issue will probably be developed into a periodical devoted to the interests of the organization and giving practical hints to the clerk in the practical discharge of his duties. Clerks will be asked to subscribe to it, and advertisements will be solicited. He thinks the employment agency scheme spoken of in the last Chicago letter will speedily materialize. They will exert every effort to induce druggists to employ only registered clerks. E. P. Bond, the vice-president, is now traveling in Southern Illinois for a drug firm. Mr. Rudnick says that there are not over 100 drug clerks out of employment in the city at present, but that many of those holding positions have been cut down in salary.

Following is a list of seniors of the School of Pharmacy, Northwestern University, who successfully passed the final examinations this week and who will receive their diplomas at the commencement exercises, next Thursday evening, June 14.

Herbert Howard Bateman, James Joseph Bilsborrow, Ernst Zeledon Bower, Carl Gustavus Breunling, George Styles Bronson, E. Percy Brown, Wesley Irwin Cole, Edward D. Carmichael, Walter Henry Dayton Roscoe Noah Dean, William F. Dexhelmer, Leon T. Durbidge, Frank Wright Dudley, John Christian Dysart, Walter Lyman Flinn, Keene R.

Furston, Edmund Clifton Friatt, Judson Webster Gates, Frank Wilson Gregory, William R. Hancock, Arthur Schroeder Hipke, Edward Eugene Horraiz, Edward James Hughes, Henry John Kamps, Louis William Karl, Albert Franklin Kasper, John E. Kraft, Fred Peterson Krough, Edward Everett Laws, Charles John Lee, Earl Roy Lovett, Harvey Elmer Manning, John Phillip McCaffery, Llewellyn E. McIntosh, Lorin A. McKnight, Charles Vincent Miller, George W. Mosche, Hans Benjamin Muesen, John Dudley Nickson, Otto F. Niethammer, Ivan Benjamin Nordhm, James William Pryor, Walter Montville Robb, William H. Rockefeller, Louis Roettig, William John Rush, Frank Edwin Sahland, James McDonald Scott, William Henry Selig, William Sevier, James Albert Smith, Ralph Harvey Smith, Andrew L. Thompson, James Elmer Torrens, Edward Tschanen, Nordal Charles Unseth, James Frederick Watts, Mal Hall Webb, John Weireter, Frank Peter Weisenberger, Frank Henry Weiss, Theodore Wild, Jr.; Albert Watts Williams, Norris Emery Williams and Frank Burr Wynkoop.

The Gilpin, Langdon & Co. prize will be awarded to F. P. Krough. The following seniors receive honorable mention: Thomas Culpit, Jr.; M. H. Webb, J. Weinetter, I. Weissensberger. The junior prize will be awarded to W. T. T. Davies of Sibley, Iowa. The programme of the exercises has not at this writing been fully made up.

EVANSVILLE, IND.

C. C. Finney has gone into chewing-gum manufacturing.

G. W. Vandusen, formerly of this city, has gone into the retail drug business at Denver, Col.

J. P. Lambert, representing Max Gessler, Milwaukee, was here recently and carried off a number of orders.

The presence of one E. B. Geil of Charles Leich & Co. in the city brought cheer to the fans of Evansville.

A. R. Pfaeflin, the genial proprietor of a neat pharmacy on outer Main street, has gone to Princeton, Ind., to recuperate.

George Mannel, late manager of Haynie's Pharmacy, has taken to the country to recuperate, having been confined to his bed for some time past.

At the recent banquet of the Elks quite a few of the drug family were represented. Christ Butch and Will Loewen were among the number who were present.

Ohning Bros.' new store is attracting widespread attention, it being neat and modern in design and beauty. It is in charge of John Ohning, lately with M. W. Alexander of St. Louis, Mo.

E. T. E. Sanpert, who harbors a vast amount of love for St. Louis, made his escape for that part of the West. However, he found his way back in the deep gloom of night, telling tales of a frightful experience.

Christ Butch, a late graduate of St. Louis College of Pharmacy, who has for the past four years been out of the fold, has returned to his native heath and has purchased the Haynie Pharmacy, Second and Mulberry streets. Mr. Butch has the well wishes of a host of friends in his new undertaking.

ST. LOUIS.

St. Louis, June 9.—The retail trade is in a very slow condition, and less business was done in May than the same month the year previous. The wholesalers report trade not exactly dull, but sluggish, and considerably less than it was in May, '93. The latter part of May there was a cut in freight rates to points west of the Mississippi, and that gave a little rush in the demand, but rates were restored on June 1, and business slowed up again.

A recent trade circular, issued by the Meyer Bros. Drug Company, announces a new and ingenious trick of morphine fiends. The firm's customers are warned against people buying drachm bottles of morphine, and, after taking them home and carefully removing the cork and caps, and emptying the contents, returning with them to the drug store, and alleging that they had been sold an empty vial. Heretofore their scheme has worked with success, as the druggist would replace the "empty" vial with a full one, and call upon the wholesaler to make good the loss.

For the past two weeks a rumor has been industriously and persistently circulated in the drug trade to the effect that negotiations were pending for a consolidation of the Meyer Bros. Drug Company and the Moffitt-West Drug Company. President Meyer said that he had heard the story several times, but that he has never thought of the matter, much less considered it. Denial of the story was also made by the Moffitt-West Drug Company.

Some of the retailers are protesting against a system now in force by some of the wholesale houses whereby salesmen call only once a week. Outside of that special day, if a retailer wants goods either a dime or a \$100 worth, he has to send to the wholesale house for them, for the latter, under no consideration, will deliver them, except on specified days.

The new city directory recently issued shows 315 retail druggists in the city.

J. B. Vinke, leading pharmacist of St. Charles, Mo., spent a few days here last week.

W. R. Beck, a pharmacist at Ottumwa, Iowa, lost \$5,000 by fire on Monday night, June 4.

All of the manufacturing establishments are operating, but with restricted forces.

The wholesale houses have given their employees a half holiday on Saturdays until Sept. 15.

A telegram from Sedalia, Mo., June 5, announced the destruction by fire of J. S. Bonnell's drug store.

O. W. Hoyer, who has spent several weeks in Denver, Col., for the benefit of his health, returned home last week.

The Antikamnia Chemical Company have been granted a trade mark in the letters "A. K." for medicinal tablets.

At Springfield, Mo., on May 26, L. T. Bell, the leading druggist, made an assignment. His liabilities are placed at \$14,000.

On May 23 the Mellier Drug Company entered suit for \$17.45 against B. Barckenweper. The bill was paid on the following day.

The Renol Chemical Company was incorporated on May 24, with a capital stock of \$25,000, all paid up. There are 250 shares of \$100.

William C. Bohanon, pharmacist, has announced himself as a candidate for Congress in the Twelfth District on the Democrat's ticket.

Monday night, May 23, the Chief of Police received notice that Leslie Williams' pharmacy, at Fulton, Ill., was robbed of \$100 worth of drugs.

Dr. R. E. Miller, in charge of the City Hospital, was burned on several parts of his body a few evenings ago, by the explosion of a bottle of carbolic acid.

Col. Edward Mallinckrodt, president of the Mallinckrodt Chemical Works, and family, have returned from a trip to the Midwinter Fair in California, having been away since March 15.

Dean W. Rockwell, a druggist on Seventh and O'Fallon streets, made an assignment June 6, to Bertram C. Kribben, for the benefit of creditors; the assets are given as about \$500.

The wife of D. P. Daugherty, president of the Daugherty-Crouch Drug Company, died Friday, May 25. The remains were taken to the former home of the deceased at Hope, Ind., where the interment took place on Sunday.

On Thursday, June 6, the Alumni Association of the St. Louis College of Pharmacy had a day's outing, thirty miles down the Mississippi, on the City of Vicksburg. There were numerous games for prizes that amounted to several hundred dollars.

In ten suits against the De Lavergne Refrigerating Company, a stipulation was filed that all of the suits should abide the result of the Mallinckrodt Chemical Company case, now in the United States Circuit Court of Appeals, on an appeal from the United States Circuit Court.

Louis Schreier, a druggist at old Manchester Road and Macklin avenue, was charged May 23 with selling liquor without a license. Dr. George W. Hess and George Umber of 5363 Arsenal street, allege that Schreier sold them whisky at 10 cents a drink, and has been selling right along without regard to the law. June 4, the trial came up, and it only took the jury a few minutes to acquit the pharmacist.

The Moffitt-West Drug Company swore out an attachment, June 6, against Frank Lahn, who formerly kept a pharmacy at the Worthen street corner of Grand and Easton avenues, for \$523.55, which the plaintiff alleges to be due for drugs sold to the defendant. The plaintiff also asked Judge Fisher for an order directing the St. Louis Safe Deposit Company to allow the Sheriff to levy on money which Lahn had stored in one of their boxes.

Wednesday evening, June 6, Otto Paul Meyer, of the Meyer Bros. Drug Company was married to Miss Alice McGowan, at the home of the bride's parents, Mr. and Mrs. John McGowan, Grand Rapids, Mich. The ceremony took place in the Episcopal Church. J. B. Whitney of this city served Mr. Meyer as best man. The young couple will spend a month in the East, then coming to St. Louis, will go to housekeeping at the Meyer family residence on Koosuk street. Next Summer they will take a trip abroad.

May 30, T. F. Meyer of the Meyer Bros. Drug Company, was elected to the Board of Managers of the St. Louis Traffic Commission.

The Western Association of Wholesale Druggists began its sixteenth annual session Thursday, June 7, at the Southern Hotel, with about fifty members in attendance. At 11 o'clock Mayor Cyrus P. Walbridge, who is president of the St. Louis College of Pharmacy, welcomed the visitors in a brief address shortly after the session began in the gentlemen's parlor. The meeting was called to order by President Carey Peters of Louisville, Ky., after which Secretary George W. Lattimer read the minutes of the previous session. The meeting was conducted behind closed doors, and lasted about two hours, when the representatives took lunch and then attended the races at the Fair Grounds.

The body has no legislative powers beyond those given it by consent and for the necessary regulation of its own organization. Owing to the existence of subordinate exchanges in various cities the representation was not so large as the membership, though every firm was entitled and was requested to send a delegate to the meeting. On Saturday occurred the election of officers, which resulted as follows: M. C. Peters, Louisville, Ky., president; J. C. Fox, Kansas City, Mo., vice-president; C. P. Frick, Louisville, Ky., secretary; C. E. Cochran, St. Louis, treasurer. Before the close of the convention resolutions on the death of the late John S. Moffitt of the Moffitt-West Drug Company and Mrs. D. P. Daugherty, wife of Mr. Daugherty of the Daugherty-Crouch Drug Company, were adopted. The association decided to meet at Cincinnati in June, 1895.

BUFFALO.

Buffalo, June 9.—Our druggists' are still waiting for business. It is not that people will persist in being so healthy so much as the weather, which is now doing its best to kill what business there is left. Constant rain has a most depressing effect on such warm-weather trade as soda water, which is hardly out of its Winter state. Indeed it may be said that we are not yet out of the Winter months, so far as this and some other trades are concerned. Druggists are especially anxious to begin the Summer season, for they feel that the new fruit flavors are going to put the soda water trade on a wholesome basis, such as chemical imitations would never do. The public have already shown a plain tendency to the natural fruit juices, and will be pretty sure to demand them hereafter. To this improvement the pure food exhibition here last Winter contributed not a little.

The new manufacturing chemists, Huyston & Wing, who established themselves on Hamburg street a short time ago, appear to be doing well, considering the times. They do not yet make a full line of articles, but are becoming known for their salsoda, Epsom salts and carbonic dioxide cylinders for soda fountains.

There is an unusual interest taken in the annual meeting of the State Pharmaceutical Association, which occurs on

the 26th at Saratoga. Whether it is the place that is the attraction, it now looks as though there would be a larger delegation from Buffalo than there was last year to Lakewood, on our own Chautauqua Lake. So far those who expect to go are C. O. Rano, W. G. Gregory, J. R. Gray, R. K. Smither, P. S. McArthur and C. A. Riggs, most of the married members taking their wives with them.

The Buffalo College of Pharmacy is to be congratulated for getting its Summer announcement out so early. It appeared in May, nearly two months earlier than formerly. The college now has a faculty of thirteen members, of whom three are non-resident. It has, since opening in 1888, graduated 125 students, eighteen more having completed the course, but, lacking the required age or experience, their diplomas are withheld. There are now ninety-three matriculates who will presumably complete the course next year. The Fall term begins on Oct. 23.

The County Board of Pharmacy reorganized at the first June meeting, but no changes were made. Dr. Gregory's term expired, and he was reappointed. R. K. Smither was re-elected president of the board and C. O. Rano secretary and treasurer. Meetings are held on the first and second Saturday of each month at the Niagara University. Examinations take place only on the first Saturday, but certificates are given at either meeting. The regular time for re-registration this year expired on May 20 up to which time 13 pharmacists and forty-three assistants appeared. There are known to be several delinquents. These will receive a second notice, which will contain a gentle hint that unless they report their licenses will be annulled.

W. A. Ziemendorf has taken charge of George H. Paddock's pharmacy at 504 Clinton street.

Munyon's Homoeopathic Remedies are now leading in that line just at present. One store reports that it sells about \$40 a day of them.

Fred A. Darrin, one of the older city drug clerks, has taken the local agency for Lettuce Cream, a toilet toilet which is gaining considerable reputation.

Harry Potruff, clerk in Dr. Gregory's Niagara Pharmacy, has gone to Canada for his health. Harry F. Harrington of Marilla, a college junior, has taken his place for the present.

Oscar L. Harries, formerly a prominent city druggist and proprietary medicine man, is now in the bicycle business, and engaged in selling off a bankrupt stock of high-grade pneumatics.

The College of Pharmacy is preparing its annual report to the State Regents, who furnish blanks for quite an elaborate record of the school. Once in five years the report has to be made very minutely and detailed.

It is not often that Buffalo drug stores are charged with aiding the saloons in selling liquor for people to get drunk on, but Policeman Harry T. Gal, was lately tried by the Police Board, charged with drinking too much in Horton's drug store on Ulca street, and neglecting his duty several hours.

The cut price ghost appears to have been downed once more, threatening as it was some months ago. The scare is on about once a year, and lasts long enough to give the members of the trade a free circulation in case their blood has become a trifle sluggish.

Charles Kelley of Skaneateles, a pas Junior in the college, has engaged at Dr. Gregory's Genesee Pharmacy. The doctor has a new \$1,000 soda fountain in his Niagara street store that ought to fill the public eye. It is of imported marble with mahogany finishings, movable syrup cans, etc.

Stephen Spryszynsky has opened a new drug store on Peckham street, in the Polish district, as the name might indicate. He comes from New York city. The need of druggists who can command two languages is felt in the Italian quarter also, but for a long time a dispenser undertook to show his dexterity by operating there without a license. It took considerable address to dispose of him, for he was very wary and would not sell to strangers, but he was ousted after a while.

The County Board of Pharmacy examined three candidates at the first June meeting and granted nine licenses, giving full pharmacy papers to Earle H. Parker and George E. Herrmann and assistants' papers to Oscar C. Diehl, Harry T. LaFevre, Harry J. Harrington, Charles Kelley, Merton R. Ward, Howard N. Church and Leon G. Palmer. All but Mr. Church are members of the college junior class. Of these only Messrs. Diehl and Herrmann are Buffalonians. The college has attracted many young men to the city, and the wonder is that they all find regular business.

The Buffalo druggists some time ago dropped their tennis club and took to the bicycle for athletics, but they are still in the Summer outing line. Last year a move was made to secure a preserve in the Adirondacks, but desirable sites are not so plenty as they might be. Tracts of 100 acres are still offered for \$10, but at 10 cents an acre they are not desirable. The idea of the Buffalonians is to secure a tract or at least a few acres in an accessible locality, so that the whole family can attend and the weaker members be left at the lodge while the men plunge into the woods. An agent at Canton is looking for a suitable spot, but has reported nothing yet. So the fishing preserve at Sardonia, a few miles south of Buffalo, is made the most of.

The Custom House has not yet disposed of its large seizure of opium reported last month. If the stories of the quantities of the drug coming across from Canada in contraband hands are true, the duty on it amounting to millions a year, the Government ought to devise some means of getting a better price for what it captures so as to get back some of its losses. At present it realizes little more than the duty on what it sells. It is reported that the Chinese firm supposed to be connected with the big haul made here last month is represented in Montreal, as well as on Puget Sound. The name of the house changes with every report—being as slippery as the Chinamen themselves, but the people remain the same. The smugglers captured here have not been brought to final trial.

The public appears not to be aware that there is a stringent law against shipping certain indammable and explosive chemicals by water. The steamer lines are alert to the situation, and keep a prohibited list for the benefit of their shipping clerks. Most of these lists exclude numerous articles not mentioned in the law. Scarcely a package freight but goes up the lakes but some consignment of drugs is included in its cargo and a knowledge of the law is essential to shippers.

The Custom House still has possession of the big haul of opium made here some months ago, the order from the Court to sell it not having been given. The smugglers came to grief in a signal fashion. Two of them, George Henderson and Edward Patterson, whose names are apparently assumed, and one Chinaman, whose name is not material, confessed in court at Rochester, and were let off with fines. Charles Kennedy, who appears to have been the ringleader, avoided trial in a most distressing way. He was let out of jail on bail, and to celebrate the event went on a terrible debauch and was brought back with every symptom of delirium tremens. An expert examination found him to be insane, and he has been in the State Hospital for the insane ever since. It is thought that he will never be brought to trial.

The ministerial conference of the Methodist Church of the district of Jamestown met at that place on June 5, and again took up the cudgels against the granting of store liquor licenses to druggists. Resolutions were passed condemning the practice and declaring that it was a violation of both the letter and the spirit of his Methodist discipline for a member to hold such a license. Of course this hits some prominent members of that church, though the personal animus of the action by the ministers does not appear in the report. The question has been up in the Methodist Church before, and Bishop Vincent, while a resident of Buffalo was obliged to say that he was not in favor of disciplining members who hold drug licenses. There is so little complaint of druggists selling liquor saloon style in this city that no action has to be taken, but there may be different practices in the Jamestown district.

Vaccine virus is again in demand. The epidemic of smallpox in Chicago attracted no attention here till it was suddenly learned that there were 1,400 cases in that city. Then it was reflected that boats as well as trains arrive from there every day, and the Health Department set to work. The co-operation of the Government Marine Hospital force was secured, and vessels were required to show clean bills of health on arrival. Careful inspections of boats and trains were made. At present the vigilance is somewhat relaxed, as the disease does not appear to have spread in Chicago of late, nor to have escaped from it. Buffalo has had two cases, but they occurred some time ago, and both recovered. Health Commissioner Wende is still urging general vaccination, however, and has just given directions for vaccinating the employees of large concerns. Free vaccination stations are to be established.

CINCINNATI.

Cincinnati, June 9.—Covington, Newport and Bellevue, our sister cities across the river, were well represented at the meeting of the Kentucky State Pharmaceutical Association held at Paris. In the Covington contingent were most of the best-known pharmacists of that city, and a right royal time did they have. The Newport delegation was chaperoned by Charles F. Keener, who never misses a meeting of this association, and Louisville, Henderson, Paducah, Bowling Green, and nearly all of the principal cities of the Blue Grass State were represented in the assembly.

Prof. Charles T. P. Fennell has the heartfelt sympathy of his host of friends in the death of his estimable wife, Mrs. Sophia Fennell, which occurred a few days ago. The deceased was a charming woman, of many commendable attributes, and was beloved by her legions of friends. She was a social favorite and an earnest worker in the church.

Walter Thompson, the lad whose eyesight was ruined by his eating a number of sugar-coated pellets, has sued the proprietor of the Fountain Drug Store at Huntington, W. Va., for \$10,000 damages. The unfortunate youth claims he purchased the pellets at this store.

The Taylor bill, which was introduced in the General Assembly at Columbus a few days ago, giving the Mayor the power to appoint the members of the Hospital Board, has not met with public favor. The present system of having these gentlemen appointed by the courts seems to be giving satisfaction, and the contemplated measure is said to be doomed to defeat.

An ingenious inventor has startled this vicinity by patenting a new poison bottle to prevent handlers of toxicological drugs from making mistakes in dispensing. The new bottle is made in the shape of a skull and is of red glass. The neck of the vessel protrudes from the top of the skull, and the time-honored crossbones are to be seen on the very edge of the bottle.

John Fallon is letting his mustache grow again.

The slot machines are soon to be banished.

John Keeshan, Jr., is living in Central Kentucky.

Harry Striethorst is just starting a wind disturber.

All the retail druggists report trade to be picking up.

Al Boehmer has been granted a divorce from his wife.

Weatherhead & Co., are to have a female cashier.

The weather is cold and soda water business very bad.

Dr. J. C. McCullough, druggist at Lawrenceburg, Ind., was in town buying goods.

A. Carlstedt, the drug broker, is ill at his home in Mt. Auburn, with rheumatism.

Billy Parchon, representing C. F. Rump & Sons, leather goods, was in town last week.

Martin Dodsworth became an expert ticket seller during the big Odd Fellow celebration.

The hospital contracts for drugs were divided between all the local wholesale druggists.

Lewis Heister will soon commence Spring housecleaning at his store, corner 7th and Elm streets.

F. Brewster Hight, representing the Butler Hard Rubber Company of New York was in town a few days last week.

Most of the local pharmacists are complaining about the prices of sponges. Some varieties are so expensive they are not in demand.

The Stein-Vogeler Company report big sales of the German Household Dyes and Paul Apperman is accordingly very happy and contented.

Ed Voss has a water spaniel which he is teaching to trot. The dog is speedy and will be matched against a famous one of Canada.

Prof. Julius H. Eichberg is to be connected in an editorial way with the new journal which is to be started by the College of Pharmacy.

Otto Rauchfuss of the Standard Drug Company has purchased the Steinciek-drug store in Upper Vine street, which recently went to the wall.

Louis N. Berube, the Avondale pharmacist at Main and Rockdale avenues, will soon have his handsome store rescued by a firm of artists of New York.

Louis Kushick is the proud possessor of a \$50 gold coin on which there is a premium of \$11. The coin was given to him by his sister as a birthday present.

In George Kyllus' library is to be found a copy of an old materia medica which was published in 1820. The ancient book differs in many respects from the works of latter-day authors.

Geo. J. Massmann, the well-known young druggist, after a lengthened illness is back in his old place, with F. Kinzbach, corner of Court and Walnut streets.

The fact that Senator John Sherman of this State favors dropping opium altogether from the tariff list of commodities, has caused some comment among "Uncle John's" friends here.

August Buttenbaum, an educated German pharmacist, arrived in this country a few days ago from his home across the big pond. He is a brother of George Buttenbaum of the Freie Presse staff.

Joseph Dehner, the pharmacist at 7th and Vine streets, is authority for the statement that betting on racehorses is a form of paresis. Joe says leave 'em alone and you will be better off financially.

Louis Sauer, the druggist at Central avenue and Baymiller street, recently heard from the pair of old shoes which he received through the American Express Company. The shoes had made their way to Waco, Tex.

Will Wagner and Louis Kusnick are now in training to reduce their weight. They have purchased boxing gloves and spend their spare time practicing the manly art of self-defense.

Prof. William Simonsen, chemist, is at present conducting some milk analyses for the city. The outcome of his work is awaited with much interest, as considerable has been published about adulterated milk.

CLEVELAND.

The drug store in Farmdale burned to the ground.

The \$15-a-year cigarette law went into effect May 23.

Druggist Handler's clerk Wallace died after a lingering illness.

The Merriam & Morgan paraffin works of this city have been damaged by fire.

The Mayell-Hopp Co. are doing nicely with the Salomee toilet and face powder. Julius W. Deutsch's "Claret Phosphates" are the rage of avenue promenaders.

Edward Beckenback & Co. are exploiting Bethesda medicinal water with evident success.

The Vinola Manufacturing Company of this city are doing a promising business in hair tonics.

G. L. Hechler presented the Warren School with a new flag upon Decoration Day.

The Prescription Medicine Company is a new Canton corporation with a capital stock of \$10,000.

The Wright Medical Company is a new Columbus corporation with a capital stock of \$10,000.

Over \$2,000,000 worth of paints are yearly made in Cleveland, no other city approaching the figure.

The Peck Drug Company of Toledo has had its name changed to Toledo Drug Company, incorporated.

A Cincinnati chemist has invented a process of milk making which reduces the cost to 5 cents a gallon.

About twenty-five members of the C. P. A. and O. S. P. A. from this city attended the Cincinnati reunion.

The Cornell-Phenger Chemical Company of Columbus will hereafter be known as the Columbus Pharmacal Company.

Quite a number of drug salesmen were present at the fifth annual meeting of the Grand Council of Ohio of U. C. T.'s, held here a few days ago.

L. S. Patterson, representing the Kohler Manufacturing Company of Baltimore, Md., has been in the city for some time taking orders for root beer, printer's ink, etc.

The Ohio Legislature has adjourned. So no more cigarette, whisky, medical examiner and pharmaceutical legislation for a long time to come. No wonder the Cincinnati convention was such a hilarious success.

Charles Spencer, the Akron druggist, was victimized out of \$12 recently. Two gentlemanly tricksters entered the store, and while one engaged Charles in "important" business conversation in the laboratory, the other tapped the till to that amount.

Fred C. Emde, ex-druggist, is making an enviable reputation in the capacity of supervisor of cemeteries. The newspapers are just now eulogizing him for his wise and courteous management, the expenses for the first quarter of 1894 having decreased over \$2,000.

In the last report of the committee of the House on claims on contingent expenses three items marked drugs are contained which foot up \$393.53. Now some of the newspapers want to know whether or not they were of the whoop-em-up kind.

The Munyon Remedy Company has opened an office at 433 Superior street.

There have been several valuable canines poisoned of late, and the authorities are attempting to fix the blame. A clue leads generally back to some drug store, and then Sec. 6,852, R. S., comes in. This law provides a fine of from \$50 to \$200 and eventual imprisonment.

The Ohio Druggists' Mutual Fire Association, recently incorporated, is now ready for business. It writes business at cost, herein following the pace set by the Retail Druggists' Insurance Company of Cincinnati. As the retailers of Ohio pay about \$100.00 a year for insurance, there is no doubt a field for the Toledo enterprise.

State Chemist G. A. Kirchmeyer of Toledo and Prof. Albert W. Smith of Cleveland have submitted another batch of analyses. Among them are cream of tartar taken from William Edwards & Co. and Danne Miller & Co. without any cream of tartar; orange wine made by Hoppe & Strud and vinegar manufactured at Lansing, Mich., which are artificially flavored, but carbonated and preserved with salicylic acid. The Hyman malt tonic, which some druggists handle, is simply sweetened lager beer. The Commissioner reports a decrease in adulterations and praises the drug trade for steering clear of falsified articles, and its disposition to assist the State office in detecting cases of adulterations. "But a minority of druggists knowingly handle adulterated articles of food or drugs," said he in conclusion, "and, as a rule, no particular attention is paid to drug analyses save when some gross violation comes to notice. We have considerable faith in the druggists, and do not share the opinion of the newspaper press that they, of all, should be investigated closest."

INDIANAPOLIS.

Indianapolis, June 9.—A big delegation of Indianapolis druggists went to the thirteenth annual meeting of the Indiana Pharmaceutical Association at Evansville on June 13 and 14. The Evansville brethren were prepared to furnish great intellectual and physical entertainment.

Police Superintendent Powell has been enforcing the liquor law so strenuously against saloonkeepers that the latter have kept up a continual howl that he ought to look after the druggists. He has done so, with the result that two or three have paid fines in Police Court recently for selling liquor without prescription and in small quantities. Councilman Cotter is endeavoring to get an ordinance through giving police the right to enter and inspect premises where liquor is sold at any hour of the day or night. This is aimed particularly at the druggists.

Business continues to be satisfactory to both wholesalers and retailers.

A new store is that of J. E. Adams of Lago, Ind.

Wilson & Brown of Greenwood are succeeded by A. W. Owens.

Druggist J. W. Piel of Sydney, Ohio, was in the city and left a large order behind him.

Otis Moore, a popular young drug clerk of Elwood, was married to Miss Ernestine Riebe.

There have been three suicides during the month caused by drinking carbolic acid, and several by other drug routes.

Spaeth & Studley, the oldest drug firm in Laporte, has assigned. Liabilities said to be \$4,000; assets, \$3,000; cause, poor collections.

A fire which destroyed a considerable business portion of Roachdale swept away A. G. Rice's drug store, with a loss to him of \$2,000; insured for \$1,200.

Parker and McAfee, the colored boys charged with murdering Druggist Eyster of this city, were, on their second trial, sentenced to life imprisonment.

The diamond anniversary of O.M.fellowship, celebrated in this city, brought a hundred druggists to Indianapolis, and their presence was felt by the wholesalers.

The Western Chemical Company of this city has lost fifteen barrels of pitch by theft of late. Two young fellows, one of them a driver for the company, have been arrested. It is said they sold the barrels for \$4 and \$5 each.

Louis H. Schuimeyer, a chemist of this city, and his wife were granted a divorce last week. One of the charges the wife made was that Louis had brought home from the laboratory a bottle of strange looking medicine, the contents of which caused peculiar feelings when she took it.

Some anonymous person tried to excite the Indianapolis public by writing to the police superintendent that Louis Snyder, in jail charged with murder, was receiving letters the mucilage on which has been sprinkled with arsenic, so that if convicted he might poison himself rather than hang.

Indianapolis has had a couple of small-pox cases this month and a large-sized scare. Thousands have been vaccinated. Local quarantines have been raised and the patients discharged. The city and its public institutions are still quarantined, however, against Chicago and against places where smallpox exists.

Joseph C. French, one of the oldest druggists in Indianapolis, and who has been at the one stand in the Masonic Temple for eighteen years, has assigned for the benefit of his creditors. He gives "hard times" as the cause. His stock is valued at \$1,500, and his liabilities, it is said, do not exceed this amount greatly. The assignee, whose bond was fixed at \$1,800, will dispose of the property within a few days.

THE SOUTHWEST.

Trout & Hall's store at Wilsonville, Neb., has been sold.

F. L. Gray & Co. have succeeded Gray & Harris at Hitto, Tex.

N. M. Bradley & Co., Mound City, Mo., have sold out to M. Moore.

Hall & Brown, Columbus Junction, Iowa have sold out.

W. C. Wheeler & Co. have succeeded Richardson Bros. at Tilden, Tex.

J. H. Williams has sold his store at End, Okla., to A. L. Mason for \$1,800.

The partnership of Fountain & Bringhurst, Byran, Tex., has been dissolved.

M. F. Hodges has bought the interest of J. Ball, his partner, in the store at Bellevue, Tex.

J. J. Canon, Moscow, Tex., has changed the sign over his door to Canon & Canon.

F. O. Pershing has given a bill of sale for \$500 for his drug store at Mount Hamill, Iowa.

Edward L. Cook, a young druggist of St. Joseph, Mo., shot himself in the presence of his wife. He was despondent over business troubles.

The Stogner Drug Company of St. Louis was incorporated May 10, with a capital of \$5,000. The incorporators are Emil Stegner, Charles Diggs and James P. McGinn.

The stock in Hutchason & Williamson's drug store at Higginsville, Mo., was considerably damaged by a fire which started in an adjoining building a few days ago. Rose & Leddy have moved from Mantou Springs to Cripple Creek, Col.

W. H. Harrison, a traveling salesman for the C. D. Smith Drug Company of St. Joseph, Mo., disappeared a few days ago and his friends fear that he has been murdered. His trunks were packed ready for him to go out on the road, and he left them behind.

The Welmer Drug Company of Russellville, Ark., filed articles of incorporation with the Secretary of State. The incorporators are W. S. Fraser, W. E. Pruitt, R. M. Drummond and P. H. Barlow. The capital stock is \$150,000, half of which has been subscribed.

C. T. Welke, a prescription clerk at Waco, Tex., brought suit last week for \$15,000 damages against W. C. Colgin, a wealthy druggist of that city. He alleges that Colgin publicly denounced him as guilty of criminal malpractice and gave him a severe beating.

Benjamin Aldrich, a druggist of Wichita, Kan., has filed a suit for \$25,000 damages against the Jacob Dold Packing Company. Several years ago the citizens of Wichita gave \$75,000 to the packing company, the consideration being that the company should operate a plant with a killing capacity of 1,000 hogs a day. Druggist Aldrich was one of the heaviest contributors. The plant was shut down a year ago, and so he sues.

The South Carolina Board of Pharmacy will hold its next meeting in Columbia, July 18. Further information may be obtained from the secretary, H. W. Hummel, Charleston.

The New Jersey Board of Pharmacy, at its quarterly meeting held in Camden, April 19, registered sixty-two graduates on diploma and examined a class of fourteen, awarding certificates to the following successful ones: William F. Weber, Millville; Arthur S. Wilcox, Philadelphia, Pa.; Henry J. Fleischauer, Springfield; Howard Baer, Salem; F. W. Speckman and Owen F. Garagan, Newark. At an adjourned meeting held in Jersey City April 20, eight graduates were registered and a class of twenty-seven were examined. Certificates were awarded to Benjamin Bethel, Paterson; H. R. Rachel, New York City; Adolph Treupel, Brooklyn; John G. Kimpel, Jersey City Heights, and C. D. Kay, Jersey City. At the Asbury Park meeting, May 22, fourteen were registered on diploma. The next meeting for registration and examination will be held in the New Jersey College of Pharmacy, Newark, Thursday, July 19.

ASSOCIATIONS.

POLK MILLER.
VIRGINIA.

American Pharmaceutical Association begins its forty-second annual meeting in Asheville, N. C., Sept. 3. Already arrangements have been made by the local committee, the members of the North Carolina Pharmaceutical Association and Asheville druggists to make the 1894 A. P. A. meeting the most successful and enjoyable one ever held. Besides the valuable scientific and professional features promised, the visitors will be regaled with true Southern hospitality, supplemented by drives and excursions to places famed for their mountain scenery in the "Land of the Sky." An entertainment already promised the Committee on Arrangements is one of more than passing interest to druggists, to be given by one whose name has become familiar to the "craft" throughout the United States, and one who, in a measure, represents the new genius of the South. We refer to Polk Miller, president of the Polk Miller Drug Company, Richmond, Va. As a delineator of negro character Mr. Miller is a success and has attracted widespread attention both from the press and prominent people in letters and art. In his dialect recital and "character sketches on the old Virginia" negro, he takes one back to the old times in the South and draws delightful word pictures true to Southern plantation life. Mr. Miller is about 50 years of age, a typical Virginian, and is said to be the best delineator of the negro character and the best story teller in negro dialect in the United States.

Reduced rates from hotels and railroads have been secured.

New Jersey Pharmaceutical Association met in twenty-fourth annual session at Asbury Park May 23 and 24. President E. B. Jones, in his annual address, reported the financial condition of the association good. Three members died during the year. A bill eliciting considerable discussion was one presented to the Legislature last Winter, having for its object the proper registration of graduates in pharmacy. The president also struck a blow at proprietary drugs, and urged each pharmacist to sell his own preparations. He also recommended that the Legislative Committee renew its efforts toward securing needed restrictive laws. The

next annual meeting will be held in Newark; time and date undecided. A suitable programme for the meeting next year will mark the twenty-fifth annual meeting of the association. A handsome antique oak card table was presented to George E. Williams in appreciation for what he had done in entertaining the delegates to the meeting. The following officers were elected: President, George W. Parison, Perth Amboy; vice-presidents, Charles F. Dare, Bridgeton; Stephen D. Woolley, Ocean Grove; secretary, William C. Alpers, Bayonne; treasurer, Geo. T. Fitzgeorge, Trenton. Executive Committee—Charles F. Dare, H. P. Reynolds, H. P. Thorne, Charles Holzhaun, H. O. Ryerson. Legislative Committee—Gilbert S. Cook, George T. Fitzgeorge.

Kansas Pharmaceutical Association held its annual meeting at Salem May 29 and 30. A synopsis of a number of papers, prepared by the students of the School of Pharmacy of the University of Kansas, was presented by L. E. Sayre. The eligibility of women for the profession of pharmacy was also interestingly discussed. Officers for the ensuing year: President, Howard H. Hettington, Wichita; vice-presidents, J. W. Hurst, Newton, and Emil Amer, Salina; secretary, Mrs. M. O. Miner, Hiawatha; assistant secretary, Fred McDonald, Topeka; treasurer, H. W. Spangler, Perry; librarian, L. E. Sayre, Lawrence. Executive Committee—F. E. Holiday, Topeka; F. T. Richter, Wichita; H. W. Spangler, Perry; A. B. Wolverton, Topeka. Eighty-six new members joined the association. Fred McDonald of Topeka secured a gold medal for submitting the largest number of new members of any traveling druggist on the road. Field sports and races in the afternoon and a farewell reception in the evening ended the exercises.

Ohio Pharmaceutical Association met in sixteenth annual convention at the Grand Hotel, Cincinnati, June 5 and 6. After calling to order, President Hechler of Cleveland introduced Mayor Caldwell, who delivered the address of welcome. H. D. Eady of Elyria responded with an address which sparkled with good points. In his annual address the president recommended that the annual dues be increased to \$2 a year, the secretary's salary be made \$300 a year, and that leading pharmacy lecturers of the country be invited to Ohio to deliver lectures. He also recommended the appointment of a committee of three to devise some plan to prevent the selling of patent medicines at cost. The latter recommendation was immediately disposed of by the appointment of a Committee on Proprietary Medicines, consisting of H. W. Stecher, Cleveland; C. W. Tobey, Troy, and A. Meininger, Cincinnati. The treasurer reported the affairs of the association in good shape, with a membership of 1,200. At the afternoon session various reports were read and thirty-two new members were enrolled. The report of the Committee on Pharmacy Law, in which the Abbott law was severely scored, led to a discussion whether it was advisable to raise a fund for such contingency in the future. The question was lost, and it was decided to await de-

velopments. G. W. Dietrich of Carthage, Mo., and Charles Menkenmeller of Wheeling, W. Va., were elected honorary members, and greetings were sent to Professor F. A. Flueckiger of Strasbourg (at present sojourning in New York) and to the pharmaceutical associations in session in Arkansas and Utah.

The election of officers resulted as follows: President, Charles T. P. Fennel, Cincinnati; Vice-Presidents, J. T. Piffner, Delaware, and George Voss, Cleveland; Permanent Treasurer, J. H. Von Stein, Upper Sandusky; Permanent Secretary, Lewis C. Hopp, Cleveland; Executive Committee—John Byrne, Columbus; John Ruppert, Cincinnati, and S. Aubley, Cleveland.

While the gentlemen were discussing the affairs of the association the wives, sweethearts and daughters took a trip on specially chartered cars and witnessed the dress parade at Fort Thomas. The evening session was devoted to pleasure, including a grand concert and a banquet later in the evening.

The second day's attendance was much better than the first. The various committees reported on work under consideration, including the proposition that the annual dues be increased to \$2 per year. The salary of the secretary was also increased to \$300 per year. The printing and mailing of circulars to educate the public in the handling of morphine and liquors were approved and the carelessness in the dispensing of poisons was discussed at some length. The Dow tax, which all druggists in the State condemn as unjust, also came up for argument.

The majority of those present favored the sale of liquors on the prescription of physicians.

It was reported by the secretary of the Ohio Board of Pharmacy that the board is to charge an examination fee of \$5 for pharmacists and \$3 for assistants, the reason given being that a great many young men try the examinations just to see what they are like.

In 1884 there were 3,642 pharmacists in Ohio, but in 1894 only 2,895. During the past year there were 561 applicants, 378 for pharmacists and 183 for assistants. Only 47 per cent. of the number passed, and were registered. The State Board insists that it is impossible for it to prosecute the reported offenders of the pharmacy laws, as it has not the time to investigate the charges.

During the discussion of questions pertaining to pharmacy the visiting ladies, under the care of the Ladies' Committee, took a drive through the suburbs, landing at the Zoo in time to enjoy a nice lunch which Manager Will Heck had had prepared for them. The grand concert at the Music Hall was the closing feature of the day.

At the final session on Thursday morning the newly elected officers were installed. When the question of a meeting place for next year came up the supporters of both Cleveland and Steubenville weakened and the speech of Treasurer Von Stein won the battle for Upper Sandusky. The meeting there will be held in the second week of next June. Ex-President Hechler insisted that something be done about druggists who sell proprietary

medicines at cost. He favored a plan of forming a separate organization for making these remedies and selling them to druggists for 10 per cent. above the cost price. The proposition, while meeting with some encouragement, was laid over until next year, a committee being appointed to investigate the matter. Resolutions of an appropriate kind were passed thanking the citizens of the Queen City for the many kindnesses extended to the members during their stay in Cincinnati.

In the afternoon the visitors took a trip on the Ohio to Anderson's Ferry.

A party of the aptively inclined pharmacists went to Coney Island, where the day was spent in the many pleasures which that resort affords. There were dancing and music and feasting. A great game of baseball was played by two nines made up and denominated as follows: Pill Rollers—A. W. Bain, c.; J. H. Hoeveling, p.; Al Melinger, s. a.; C. T. P. Fennel, 1st b.; Geo. Kellus, 2d b.; Lou Sauer, 3d b.; W. Wagner, 1. f.; H. Strelthorst, c. f.; E. Helmenan, r. f. Pestle Jammers—J. Hall, c.; J. Eichberg, p.; Ed Vos, s. a.; J. C. Otis, 1st b.; H. Justis, 2d b.; L. Kusniek, 3d b.; W. Dotsey, 1. f.; H. Hoberg, c. f.; J. Dehner, r. f. The score was 19 to 10 in favor of the Pill Rollers, but there was no sleep lost that night on account of the result. Taken altogether the convention was a success, and the local druggists are sorry their visiting brethren couldn't remain longer in the city.

After adjourning sine die Friday morning, the association found itself surrounded by a series of railroad troubles, which kept Secretary Hopp busy. The railroads refused to recognize the special tariff rate—full fare going, one-third returning—issued to the members of the association. The reason assigned was that the Cleveland and Columbus druggists and pharmacists from other cities got a special rate of two cents a mile, so the companies evaded up matters by compelling the country members to pay full fare. There was a small-sized row over this.

A FEW FALLEN SCRAPS.

Secretary Hopp was the busiest man in town.

President Fennel bore his honors with good grace.

"Uncle" John Keeshan failed to attend the several sessions.

Treasurer Von Stein vouched for the good fishing at Upper Sandusky.

Ed Voss danced at Coney Island like a French dancing master on a lark.

Johnny Bauer of Sycamore and Milton handed around a few good cigars.

Benny Isaacs, Sharp & Dohme's man, knew every one at the convention.

Louie Hechler was there yet. He's a good fellow sometimes already once.

Dr. John C. Otis, the next Corner, jollied the delegates for practice sake.

Andy Bain spent a great deal of his time "rubbering" among the samples.

Speaking of beer, those fellows from Cleveland are judges of the malt fluid.

John Falon and Louis Klayer were always together at the various meetings.

Every one talked about the "Moving Day" number of The Pharmaceutical Era.

New England Wholesale Drug Exchange met in annual convention at the Summer residence of its newly elected president, William O. Blanding, at Rumboldt Point, in Barrington, May 23. The trade was well represented, and the afternoon was devoted to a social time, which was particularly enjoyed by all present. Officers elected are: President, William O. Blanding, Providence; vice-president, Thomas Sisson, Hartford, Ct.; secretary, Frederick L. Carter, Boston; treasurer, Charles C. Goodwin, Boston. Member of Executive Committee—John D. Gilman, Boston. Besides the above named there were present Thomas Sisson, Hartford; Charles W. Whittlesey and F. S. Calhoun, New Haven; Hugh H. Osgood, Norwich; Benjamin J. Wilson, Reuben L. Richardson, Charles A. West, E. W. Cutler, John D. Gilman, Fred L. Carter, Charles F. Cutter, John G. Benedict, Charles C. Goodwin, M. W. Joslyn and George F. Kellogg of Boston; George B. Calder, William C. Calder, Robert B. Chambers, Arthur W. Clafin, William L. Clafin, George F. Woodley, Jr., and Charles G. Abbee of Providence, and Irving M. Smith, Barrington.

Massachusetts Pharmaceutical Association will hold its thirteenth annual meeting at Worcester, June 26-28, with headquarters at the Bay State House. The local committee have arranged an elaborate programme, including a banquet and a carriage drive to Lake Quinsigamond. Tuesday evening, June 26, C. F. Nixon, Ph. G., will give "A talk on the medicinal plants indigenous to Massachusetts," to be followed by a musical entertainment. F. M. Harris, 814 Main street, Worcester, Mass., is the local secretary.

New York State Pharmaceutical Association will hold its sixteenth annual meeting at Saratoga Springs, beginning June 26 and continuing the 27th and 28th. The sessions will be held in the United States Hotel, which will also serve as headquarters. The local secretary, Chas. F. Fish, Saratoga, N. Y., or Clay W. Holmes, secretary, Elmira, N. Y., will answer questions from any one desiring information.

Rhode Island Mortar and Pestle Club (branch of I. R. D. L.) held its regular monthly meeting in Providence May 9. After a banquet, which was enjoyed by about fifty members, F. M. Harris of Worcester, Mass., gave a pleasing account of the work of the league in his county and State. The next meeting of the club will be held at Newport on "Ladies' Day." Ten new members were admitted.

Dallas (Texas) druggists are discussing the necessity of a poison law. In that State there is now no law regulating the sale of poison. Any one is at liberty to go into any drug store, buy poison and take it before the eyes of the druggist. The association resolved to put the matter before the city council, as the nearest executive body, to obtain a law regulating the sale of all poisons.

Maine Pharmaceutical Association will hold its annual meeting in Portland, June 29.

Wheeling (W. Va.) Druggists' Association, formed for the mutual benefit of its members and the regulation of prices, starts off with a membership of nearly every drug man in that city. Officers are: President, C. Menkemeller, Vice-President, Christian Schnep; Secretary, W. H. Hague; Treasurer, C. R. Goetze.

Tennessee Pharmaceutical Association has decided to hold its next annual meeting on the third Wednesday in July, 1905, at Mont Eagle.

Wisconsin Pharmaceutical Association will meet in Racine Aug. 14-16. One and one-third rates will be given by the railroads.

COLLEGES OF PHARMACY.

Massachusetts College of Pharmacy on May 23 graduated seventeen young men. Their names are subjoined: Lewis F. Baker, John Ferrin, Alfred W. Balch, Adam T. McColgan, Albert H. Benhard, John A. McIntosh, Joseph Bergin, John A. Osgood, William S. Briry, Milton H. Plummer, Charles H. Cahill, Irving Nute, Frank H. Coffin, D. A. Roberts, John E. Crowdie, Charles A. Stover, James C. Fausnaught. The following named students have completed the course of study, but have not had the four years' experience required for graduation: Arthur L. Beal, Frank H. Holt, Mary Steele Ewenz, Joseph I. Moulton, Harry Fowler Smith.

When the graduation exercises took place there was a gratifying attendance of relatives and friends. At 8 o'clock the members of the graduating class, who for the first time in the history of the college wore caps and gowns, took their places on the platform, which had been beautifully decorated for the occasion. The proceedings were opened by music by an orchestra. The salutatory was then pronounced by William Story Briry, who spoke in warm terms of the growth of the college, and described its latest year as one of unexampled prosperity. Rev. Daniel Evans, pastor of the Congregational Church of East Weymouth, next delivered the address. Dr. Julian W. Baird delivered the valedictory address for the faculty of the college. Among other things he said new courses had been added, the old ones had been improved, and he was sure the students in the future would maintain and increase the reputation of the college, which now stood second to no other institution of like kind in the country. James Cherry Fausnaught delivered the valedictory address for the class, and Secretary Charles C. Williams, having called the roll, President William F. Sawyer conferred the degree of "Ph. G." upon the graduates.

The next evening the cardinal and cream of the College of Pharmacy decorated the menus of the alumni at Young's. The graduates have had an annual dinner each of the last twenty-four years, and this one was complimentary to the seventeen young men of the class of '94, who had just received their diplomas. The graduates, almost a hundred of them, brought their lady friends, and had a right merry time. An orchestra enlivened the interval between speeches, and also played during the dinner. President

MICHIGAN UNIVERSITY NOTES.

A. E. Mummery, Ph. C., '85, has opened a new and modern pharmacy on the corner of Washington and Fourth streets.

W. F. Jackman, Ph. C., '87, druggist in Detroit, was here on the 5d errand of laying away in the cemetery his wife, who died in Detroit, Thursday evening, May 31.

The laboratory closes on Friday, June 15. In consequence the seniors have redoubled their energy and are working with a will upon their special theses. These, together with review quizzes and final examinations, "Make the Seniors' determination strong." Class day preparations are complete, and class enthusiasm is rampant. The boys are carrying canes and giving the "Waheoi! Catechu!" yell, at every opportunity.

Prof. A. B. Stevens is giving the senior pharmacists a very interesting and instructive course of lectures on prescriptions, supplemented with the stereopticon. Facsimiles of physicians' prescriptions are thrown on a large screen, read and criticised by the class, and suggestions made as to the proper method of compounding them. In case of disagreement some one is appointed to compound the prescription and report on it at the next lecture.

The pharmacy students, accompanied by Profs. Stevens and Schlotterbeck, and the electrical engineering students, with Profs. Carhart and Patterson, paid a visit to Detroit on the 29th ult., the pharmacists to inspect the large pharmaceutical laboratories, and the engineers the electrical plants. On arriving in Detroit pharmacists proceeded immediately to the laboratory of Frederick Sterns & Co. Here in squads of nine, each under the leadership of a competent guide, they were shown through the immense establishment. It was very interesting to trace the crude drugs from their entrance into the laboratory, through many rooms, into innumerable preparations, and finally leaving them packed and variously labeled, ready for transportation. The ladies were especially interested in the department devoted to the manufacture of pasteboard boxes of various designs, and each received a handsome one before leaving the room. The students sampled Wine of Cod Liver Oil, and some of them were even accused by classmates of deserting their squad and joining another in order to pass once more through that room. The perfumery department was of interest to all, and each student received a handsome souvenir, designed especially in honor of his visit. After an hour and a half of entertainment the pharmacists again found themselves back at the main entrance. Here Prof. Stevens, with a few fitting remarks, introduced F. K. Stearns to the class, and after three cheers for Frederick Sterns, followed by other vocal demonstrations indicative of appreciation of the kind courtesies shown them, the class disbanded for lunch and a short rest with orders to meet on the corner of Woodward and Jefferson avenues later, to proceed on their further course of inspection of Detroit's pharmaceutical enterprises.

Northwestern University, School of Pharmacy, Alumni Association, has become incorporated.

CORRESPONDENCE.

We accept no responsibility for the views and utterances of our correspondents. Contributions must carry full name and address of the writers, which, however, will not be published, if so requested. Copy should reach us ten days in advance of date of issue.

THE HAYES PLAN.

To the Universal Trade Association of Detroit, Mich.

I just read an open letter addressed to the Chicago members of the Universal Trade Association. The writer of the letter was evidently prompted by a desire to discredit my report to the Chicago members of the Universal Trade Association.

I can well afford to ignore your statement that I am not a stockholder, but the fact remains that I was the official delegate of the Chicago stockholders and the Chicago Retail Druggists' Association, sent to Lowell to ascertain whether or not the Lowell manufacturers were as enthusiastic in their support of the "Hayes" plan as Mr. Hayes represented to the Chicago druggists at various meetings.

After my return from Lowell I reported that the Lowell manufacturers were not enthusiastic and positively declined to adopt the "Hayes" plan and assured me that they so informed Mr. Hayes. Therefore the report of Mr. Hayes that the Lowell manufacturers were enthusiastic about his plan was entirely imaginary and not warranted by facts.

I repeat this report in every respect and challenge Mr. Hayes to prove the truth of his imaginary representation, while I positively declare to the retail druggists of the United States, and to Mr. Hayes individually, that I am prepared to substantiate the truthfulness of my report.

This is all that I care to say at present. Had I more time I would have written a shorter letter.

I decline to enter into a discussion of the "Hayes" plan without the support of the manufacturers.

I furthermore decline to discuss the purpose of Mr. Hayes to represent to prospective stockholders what he knew to be not warranted by facts. After again declaring that I went to Lowell for a specific purpose, and made my point, I shall rest content to let the stockholders settle the matter with Mr. Hayes.

I must, however, briefly refer to my Detroit investigation. Mr. Hayes obtained a liberal support in Chicago on the strength of his statement that 2,400 shares of the Universal Trade Association stock had been sold to Detroit retail druggists and about \$3,000 of the association money was in bank, and not a share had been sold, would be sold or could be sold to anybody but a retail druggist; that all of the officers and directors of the Universal Trade Association were retail druggists and nobody could be connected with the concern but retail druggists.

Mr. Henry Getz and myself went to Detroit to verify these statements. This is what we found:

President and General Manager, Mr. N. Hayes; Vice-President, Mr. Wagner, a

Craig recommended the attention of all pharmacists to research and advanced methods, that the members might do more than the necessary routine duties of a pharmacist. Addresses were made by President Sawyer for the college and C. A. Stover for the class of '94. Prof. Robert W. Greenleaf, for the faculty, made a most interesting address, showing the progress of the school, and touching upon many phases of pharmaceutical training. He stated that the management of the school intended to confer with President Eliot with a view of gaining such practical suggestions as it could in regard to strengthening the general education of its pupils. Several of the members of '83 made short addresses, and the president of the State Society congratulated the alumni upon their reputation and standing. Among the prominent gentlemen present were President William F. Craig, F. H. Butler, Lowell, Secretary State Board of Pharmacy; J. Allen Rice, president State Pharmaceutical Association; President W. F. Sawyer of the college; Rev. D. Evans, East Weymouth; Profs. Tucker, Marlowe and Baird; James O. Jordan, Boston Druggists' Association; A. K. Tilden, Massachusetts Board, and W. F. Cate, Rhode Island Board of Pharmacy.

The officers of the alumni for the following year are: President, W. F. Craig; Lynn; Vice-Presidents, F. H. Carver, Plymouth, and F. L. Decker, Salem; Secretary, W. L. Scoville, Boston; Treasurer, J. Allen Talley, Wellesley; Auditor, J. G. Godding, Boston.

Ohio Normal University, Department of Pharmacy, graduated the following twenty-six gentlemen at its commencement exercises held recently: Alfred B. Thompson, Hudson, Mich.; Frank H. Snyder, Mahanoy City, Pa.; George L. Saunders, Lancaster, O.; Harry O. Peters, Alvarado, O.; W. Carlton Collins, Blue Bell, O.; Harry Blankmeyer, Hanging Rock, O.; W. L. Hewitt, Waynesburg, O.; Walter Newburn, Jr., Brooklyn, N. Y.; F. M. Miller, Shawnee, O.; D. H. Fobes, South New Lyme, O.; T. H. Collamore, West Unity, O.; H. N. Karchner, Jr., Nescopec, Pa.; Wm. A. Melkie, Lancaster, O.; E. E. Youse, Hoagland, Ind.; G. A. Larson, Pine Knob, Wis.; J. Harry Ulrichson, Williamsport, Pa.; R. E. Kincaid, Hersey, Mich.; O. B. Thuma, Shauks, O.; J. B. Oliver, Dayton, O.; Theo. E. Siewert, St. Marys, O.; M. H. Plomerfelt, Gettysburg, O.; Harv. A. Twining, Haskins, O.; Maynard Dalton Brown, Wauseon, O.; T. J. Evans, Columbus, O.; W. Herbert Nivins, Carrollton, O.; C. J. Williamson, Spoe, O. The class was the largest ever graduated from the department. H. O. Peters, salutatorian, W. C. Collins valedictorian, H. A. Twining class poet, J. H. Ulrich and Walter Newburn class historians and G. L. Saunders and Harry Blankmeyer class prophets. Professor N. R. Melhorn delivered the class address.

University of Minnesota College of Pharmacy conferred the degree of Ph. G. on the following gentlemen June 7: Miller Thompson Bolton, Alfred B. Hart, Enoch Hangseth, Thomas W. Hovorka, Bernhard O. Leubner, Lucy H. A. Blanchard completed the course in pharmacognosy, and L. C. Chapple that in pharmacy and in chemistry. The following were promoted to the senior class: Robert T. Burke, Dan Farmer, A. H. Fieldstadt, W. C. Haney, A. H. Hillard, Alice Houlson, G. W. Iltis, John Nelson, I. C. Olson, Frank Repple, S. F. Sanderson. Specials: Fred Slight, W. W. Root.

tobacco merchant, Secretary, Mr. Marble, a young man who had no books, no list of stockholders, and, in fact, did not have the slightest knowledge of the affairs of the association, but referred us to the treasurer, an estimable, genial coal merchant, who naively pleaded guilty, and said that he had \$10 in the treasury some time ago, but when Mr. Hayes asked him for a loan to make a trip to Chicago he generously forked over the paid-up capital of \$10, which completely exhausted the official treasury of the concern.

Mr. Connor, the coal merchant and treasurer, finally admitted that he had been in possession of a certified check of \$50, which had been sent to him by the financial agent of the Chicago branch of the Universal Trade Association. This check, by the way, had been given by Mr. Goetz, the financial agent, to Mr. Hayes in a sealed envelope addressed to the Universal Trade Association of Detroit. Mr. Hayes apparently had used the precaution, in anticipation of coming trouble, to have this check removed from the envelope for the purpose of certification.

Mr. Connor, the coal merchant and treasurer of the Universal Trade Association, further stated that his resignation had been tendered to the president and general manager, Mr. Hayes. His reason was simply disgust with the concern. Mr. Connor, coal merchant and treasurer, was ready to deliver this certified Chicago check to the proper authorities on condition that he be paid \$50 for his services.

Mr. Connor, the coal merchant and treasurer, further stated that the shares which he owned were presented to him by Mr. Hayes for previous services.

Mr. C. E. Marble, the secretary, stated that he had paid \$1,500 in hard cash for his shares, which statement Mr. Hayes flatly contradicted by saying he only received \$100 from the gentleman, which we could not find in the treasury, or any record of it anywhere. We carefully searched for the other stockholders mentioned by Mr. Hayes among the retail druggists of Detroit, but found that they were only indorsers at best of the plan, the majority of whom were not personally acquainted with Mr. Hayes, hardly knew anything about the plan, and denied having taken any stock at all.

This much in verification of Mr. Hayes' statement about his enthusiastic support by the Detroit retail druggists.

Since my statement has been challenged in an open letter I am compelled to make my answer in the same way, soliciting the widest publication of the same. Most sincerely yours,
E. VON HERMANN,
Chicago, Ill.

Michigan Pharmaceutical Association will hold its twelfth annual meeting in Detroit, Sept. 13-21, during the session of the State Fair. It has a membership of 600, a good showing for any pharmaceutical association at the present time. Many valuable papers have been promised for the occasion, and every member is expected to contribute something of interest to pharmacists. The programme containing full particulars will be sent to members and others at an early day.

THE CUTLER.

To the Editor:

We congratulate you upon your change from Detroit to the metropolis of America. Glad to see all the evidences of prosperity, and as the exponent of the most advanced ideas of pharmacy you deserve to succeed.

The writer is not (to his knowledge) acquainted with your Cincinnati correspondent, but considers his report well up to the average. He might say that Cincinnati has the cut-price fever bad. Just one of those cases where confidence seems all gone, and hardly any ten out of the 20 odd would consent to meet in any kind of organization, because of a want of confidence and harmony. The prominent reason for this is that the "man across the way" has done this or that, and "I propose to be up and doing" and meet all competition, and, if necessary, go him "one better." The present demoralization is due, in the main, to the class who could not pass an examination of a "2-year-old," yet know more tricks than any circus mule in America. The great unthinking class that want something for nothing grasp baits that lead to their being "anded" in short order, and, of course, they don't know how it came about, or, in fact, that it occurred. The druggist that makes a Cheap John affair of his shop is to be pitied, if not damned, though the latter is generally the case. The more ignorant the dealer the greater the disposition to cut the life out of the profits, and he is of that character that the policy of "never say die" prevails.

Hood's Sarsaparilla, 67c., and aqua ammonia, with a superabundance of "aqua," 5c. per pint; hay rum and elixirs and decoctions far more valuable (?) than the advertised and called-for goods of everyday sale, and the gulping "public" take them in nine times out of seven. Wonder is why hobby-horses, bicycles and nigger babies are not put in as "inducements" for trade. We may come to it later on; but, thank "heaving," we are not there yet.

The State Pharmaceutical Association convenes here next week. It remains to be seen what can be done for the progress of the drug business; but it is to be hoped that the evils referred to will be discussed dispassionately, and great good accrue by a united action and a wise course generally. Now, if ever, is the time to stand together, and we hope for great results. With best wishes,
"UBIQUITOUS,"

Cincinnati, June 1.

E. J. KRETZ, Pittsburg, Pa.

Contributions are also made by N. P. Westberg of Madison, Minn.; D. D. Turner, Northfield, Minn., and others, which are not published because these queer orders lose much on being put in cold type.

DRUGGIST'S ADVERTISING.

To the Editor:

My little article on advertising, accompanied by reproductions of three of my ads., in your May 1st issue, has occasioned almost innumerable inquiries in regard to the process I employ in getting up my cuts, and my typewriter has been going almost constantly, since about the 5th or 6th of the month, replying to them. These numerous letters lead me to the belief that The Era is read by a great number of druggists, and I write this just to let you know of the numerous responses, as I presume you are always pleased to hear of the good work that you are doing. The inquiries have come from a majority of the States in the Union, and not a small number from the largest cities. Of course this makes me feel that I, through the columns of your excellent journal, have done my brother druggists some good, in that I have set them to thinking in a new channel in regard to style of advertising. Since these inquiries were not solicited, I feel doubly sure that I have done a little good toward advertising. All the inquirers have fallen into the same error in regard to the process which I employ. It is not zinc etching, but engraving, done on steel plates, through plaster paris and other ingredients, and then cast with type metal and blocked. Yours very truly,

A. J. EMBREE,
Belton, Tex., June 5, 1894.

HE WANTS HIGHER WAGES.

To the Editor:

I would like to say just one or two words in remonstrance against the appellation of "Drug Peddlers" by Mr. S. P. Whitmarsh, and that is—pharmacists, pay your clerks larger salaries and you will have fewer "drug peddlings" establishments to compete with. Moral: A word to the wise is sufficient. I. J. WHITE, Philadelphia, Pa.

TRADE COMMENT.

It is said that of all the countries of the earth none can boast of the rapid (comparative) advancement in wealth, science and the arts which has been made during the last ten years by Japan.

William Dreydoppel, wholesale soap manufacturer, 203 North Front street, Philadelphia, has made an assignment. The assignee reports that the liabilities will amount to between \$30,000 and \$40,000, while the assets, including real estate, are from \$15,000 to 20,600.

It is reported that the Italian Government is negotiating with a Belgian syndicate to sell a concession for the manufacture and sale of alcohol within the kingdom. The price for the monopoly is said to be \$8,000,000, with an annual payment of \$9,000,000 for a period extending over fifteen years.

Owing to an oversight the prices quoted for Paris Green, under the heading of "Prices Current," were not revised in our issues of May 15th and June 1st to conform to the changes made by the associated manufacturers of that article. The proper correction will be found in the present issue.

The British war office is considering the feasibility of providing every soldier with a pocket medical and surgical case, and in addition to a course of instruction upon the proper methods of stopping the flow of blood, it is proposed to indicate the leading arteries by dotted lines tattooed in India ink on the body of each soldier.

The Indiana Pharmacist, in mentioning the fact that George W. Sloan's drug store at Indianapolis is called the "Pharmacopolium," and that Harry Zimmer runs the Herbarium, says: "Now, if some other enterprising druggist would christen his place the Chemicalorium, or the Meliclinarium, or the Drugitatorium, or the Apothecarorium, we would be right in it."

The American Glucose Company, Buffalo, N. Y., inform us that it is the present intention of the company to build a new factory to replace the one recently destroyed by fire, but just where it will be located is still undetermined. In the mean time their factory at Peoria, Ill., is in full operation, although somewhat handicapped by the coal strike.

The Supreme Court of Georgia has decided that the words "more or less" mean accidental variations which are not unreasonable. This applies to sales of personality as well as realty, and to excesses as well as deficiencies. It allows for a reasonable latitude in the performance of an obligation, but not a wide variance from the mutual estimate of both parties.

California has 80,000 acres of land devoted to the culture of wine grapes, and 110,000 acres planted with table and raisin grapes. The annual production of wine is estimated at 25,000,000 gallons, and the number of wine cellars is in the neighborhood of 700.

"Engineering" of London says that the deepest borehole in the earth is one now being sunk at Poroschowitz, in the Rybnik district, Upper Silesia. The work is carried on by means of the Mannesman tube, and a depth of 6,700 feet has already been reached. It is the intention to reach, if possible, a depth of 8,500 feet for the purpose of making observations upon temperature and other phenomena of scientific interest.

A writer in the Baltimore American suggests that many portions of the Southern States having light sandy soils might be found to be adapted for the growing of licorice. It has been found to be a very profitable crop in Belgium and in western England, where several hundred acres yielded \$250 to \$350 per acre. It is said that with improved methods of cultivation an acre of licorice can be worked as cheaply as an acre of corn.

Much amusement was lately created by the story of the man who swallowed some leeches which had been prescribed for him, under the impression that they were intended for internal use. We note, however, that Dr. Sahli of Berne presented a paper upon the therapeutical action of an extract of leeches at the recent meeting of the International Medical Congress. The victim of the error can now claim credit for being in line with advanced medical research.

Upon complaint being made that the actual weight was taken as the basis for assessing duty on soda ash at Philadelphia and New York, while invoice weights were used at Boston, the Assistant Secretary of the Treasury has replied that such is not the case, the practice being to weigh a certain percentage where the packages are of uniform size, or all the packages when not of uniform size. No allowance is made for the increase of weight by the absorption of moisture from the atmosphere.

Besides doing many things which appear strange to us, the Chinese use India ink as a medicinal agent, both externally and internally, and also regard it as an excellent barometer. The laundryman always keeps a dish of it diluted to a certain consistency on his desk for the clerical labors of his establishment, and finds that when it remains in a liquid state for considerable time without further dilution that the chances are favorable for more rain while an opposite condition of affairs renders a prognostication of drought quite appropriate.

The Sandusky Chemical Co., Sandusky, Ohio, make a specialty of oil of sassafras and oil of camphor. They are also making other synthetic oils in quantities.

There is a jar of ointment 3,000 years old in the museum of the Duke of Northumberland at Alnwick, which is treasured as a rare example of the pharmaceutical abilities of the ancient Egyptians. Notwithstanding its great antiquity, it still retains a powerful smell, which is held to be an additional evidence of the thoroughness of the pharmaceutical methods of the ancients. Should this standard of judging ability be reliable there is no doubt that many of our pharmacists could show ointments of their own fabrication, whose odor would indicate an age of at least 10,000 years.

The American method of transporting liquids by means of tanks is to be employed by the Paris-Lyons-Mediterranean Railway Company of France. This road passes through the richest and most productive wine region of that country, and the gradual lowering of the prices of wine during the last few years has made it imperative to lower the cost of production, into which the item of transportation enters quite largely. The tanks recently put into service by the railroad named are of a capacity of about twelve barrels, and a great saving will be effected in the handling of this product.

Among the recommendations recently laid before the House of Representatives is one from Secretary Carlisle, favoring the publication, at stated intervals, of a statistical abstract of foreign countries. An interest in the commerce, industries and economic affairs of foreign countries seems to have been newly awakened in this country, and the inquiries regarding such matters are making considerable demand upon the already overburdened facilities of the Bureau of Statistics. It is thought that a regular publication of such matters will obviate the necessity of personal replies to these inquiries, and the expense to the government will not be appreciably augmented.

The Red Cross bill, forbidding the use of the red cross as a trade mark, except by permission of the Red Cross Society and the payment of \$500, referred to in a previous number of *The Era*, has been reported upon unfavorably by the subcommittee of the Senate, and the bill is probably dead. There is something quite significant in the history of this bill, which leads to the suspicion that the motives for its introduction were not entirely of a disinterested nature. This view of the matter has justification in the fact that one of the parties requesting its withdrawal was none other than Miss Clara Barton, the recognized head of the Red Cross Societies.

It may interest the trade in general to learn that Meyers Brothers Drug Company, of Dallas, Texas, have disposed of their stock to H. W. Williams & Co., Fort Worth, Texas, who will remove it to the latter city. Dallas, however, is not to be without a wholesale drug house, for the Texas Drug Company has been organized, with a capital stock of \$100,000, to carry on such a business, and they expect to open their doors July 1. The officers of the company are well-known drug men, the president being Guy Sumpter, vice president, Yancey Bartholow, secretary and treasurer, H. P. McKnight.

We understand that they will carry on an exclusive wholesale drug business, the retail part to be entirely eliminated. They have extended an invitation to the traveling fraternity to make use of their offices when in Dallas, which invitation we have no doubt will be quite freely accepted. They also solicit samples and advertising matter from manufacturers, proprietors and dealers, as well as correspondence from those contemplating the introduction in Texas of goods in which the drug trade is interested. We refer our readers to their announcement in this issue.

The official classification No. 13, adopted by the joint committee representing the trunk lines, which went into effect May 1, seems to call for further protests from those whose interests will be affected by the shirking of carriers' risks by the railway companies. At the top of every page of the classification the following note appears: "Property shipped not subject to uniform bill of lading conditions will be charged twenty (20) per cent. higher than as herein provided (subject to a minimum increase of one (1) per cent. per 100 pounds) and cost of marine insurance. (See rule 1.)"

Rule 1, to which this refers, is as follows:

"Unless otherwise provided in this classification, property will be carried at the reduced class rates specified herein, if shipped subject to the conditions of the uniform bill of lading. If shipper elects not to accept the said reduced class rates and conditions, he should so notify the agent of the receiving carrier at the time his property is offered for shipment, and if he does not give such notice, it will be understood that he desires his property carried subject to uniform bill of lading conditions in order to secure the reduced class rate thereon. Property carried not subject to the conditions of the uniform bill of lading will be at the carriers' liability, limited only as provided by common law and by the laws of the United States and of the several States, in so far as they apply. Property thus carried will be charged twenty (20) per cent. higher (subject to a minimum increase of one (1) per cent. per 100 pounds) than if shipped subject to the conditions of the uniform bill of lading, and the cost of marine insurance will be added over any part of the route that may be by water."

Condition No. 1, of the uniform bill of lading is as follows: "No carrier or party in possession of all or any of the property herein described shall be liable for any loss thereof or damage thereto, by causes beyond its control, or by floods, or by fire,

or by quarantine; or by riots, strikes or stoppage of labor; or by leakage, breakage, chafing, loss in weight, changes in weather, heat, frost, wet or decay; or from any cause if it be necessary or is usual to carry such property upon open cars."

A SUBSTITUTE FOR COFFEE.

The above is the title of a bulletin issued by Purdue University Agricultural Experiment Station, the purpose of which is to direct attention to an easily available substitute, capable of being grown without special care in northern latitudes of the United States, viz.: the Soy or Soja bean (*soja hispida*). This is a Japanese plant of upright, stiff, bushy form, attaining, under favorable circumstances a height of three feet. There are three large leaves on a leaf stem, from the axils of which come short flower shoots, producing at maturity pods in clusters of two and three. Each pod contains from two to four seeds, a little longer than broad, being about three-eighths of an inch in length. The plant sends a vigorous root down into the soil, and the leaves, stem and pods are, as a rule, very hairy. One planter of these beans reports an exceptional yield of 782 beans on one stalk and sixteen bushels upon an acre. An analysis of the bean, made by Prof. Huston, in the college laboratory, showed the following as its constituents: Moisture, 6.36; fat, 18.34; protein, 32.93; fibre, 5.59; ash, 5.81; carbohydrates, 31.05; total nitrogen, 5.27; albumenoid nitrogen, 5.13; real albumenoids, 32.10. Soy beans lack the alkaloid, caffeine, which gives to coffee its characteristic taste and physiological action, but they contain, according to Stings and Morawski, a ferment said to be one of the most powerful known in its action upon starch, two-thirds of which it converts into sugar and one-third into dextrin. The amount of starch present in the beans is so little that bread made from them has been recommended in diabetes. Soy beans are not suggested as a substitute for coffee in the sense that the peculiar flavor or action of its alkaloid can be imitated, but those who have tried them aver that a drink made from them is much more enjoyable than a great deal of the so-called coffee served in some hotels and restaurants, and that the flavor is much more agreeable than that of the usual coffee substitutes, such as roasted rye, barley, carrots, chicory or wheat bran.

NUMERALS AS TRADE MARKS.

In the case of the Humphrey's Homoeopathic Remedy Company against Hilton, to restrain the latter from using certain numerals in connection with the name of remedies, which the complainants claimed as part of their trade-mark, the United States Circuit Court for the Southern District of New York decided adversely to the plaintiffs. The defendant manufactured and sold remedies upon which were labels bearing the number of the remedy, very much upon the same style as the Humphrey's Specifics, such as "No. 1 Fever," etc. In its decision the Court said: "Mere numerals cannot be considered arbitrary symbols, and there

must be some collateral characteristics to invest them with the qualities of a trade-mark—some peculiarity of form, ornamentation, coloring or combination to make them distinctive and take them out of the common category. It may be that numerals which are arbitrarily selected with out any purpose of identifying the article to which they are affixed from any articles of a similar class may become the subject of a trade-mark; but the use of numerals as a short method of identifying the several members of a class and distinguishing one of them from another is as old as the use of written words. When so used they are, in substance and effect, descriptive terms. The number conveys to the reader details which otherwise would have to be amplified in words. Hence, it is that the practice is so common with manufacturers and dealers of numbering the varettes so as to indicate by reference to advertisements, photographs or other descriptive mediums the size, grade or peculiar characteristics of each for their own convenience and that of their customers. No one can acquire an exclusive right to appropriate them for such a purpose. No one has the right to appropriate to his exclusive use a sign or symbol which, from the nature of the fact it is used to signify, others may employ with equal truth, and, therefore, have an equal right to employ for the same purpose. It is because of this principle that a trade-mark cannot be acquired by the adoption of a word which is merely descriptive of the quality, ingredients or characteristics of a commodity."

"ONE NIGHT" CURES.

The Official Gazette of the Post Office for May 1, contains the decision of the United States Supreme Court upon the question of infringement of trade-mark claimed in the words "One night," etc., as applied to the products of two rival manufacturers of cough syrup. As the matter has commanded considerable attention, the decision of the court, while depending to a certain extent upon technicalities, and the skill with which evidence was presented by the contending parties, is of quite a little interest to the drug trade. From the statement of the case it appears that the Kohler Medicine Company of Baltimore manufactured in 1888 a preparation called "Rocky Mountain Cough Syrup," and in 1889 put up a "One Night Cough Cure." During 1889 the stock of labels for the cough cure gave out and it was re-christened "One Night Cough Cure," and written labels were used. In December, 1890, the Kohler Medicine Company registered the words "One night cure" for a cough remedy and a cough cure, and in January, 1891, Ellsworth S. Beshore registered the words "One Night Cough Cure," with the result that the Circuit Court of the Eastern District of Pennsylvania dismissed a bill of complaint from the Kohler Manufacturing Company, virtually agreeing with the defendant, Beshore, that the word "cough" had been interpolated into the registered title "One Night Cure" of the complainants, after its registry by the defendant. The Supreme Court, while deciding the case in favor of the defendant, upon the "facts

and law," as dealt with the court below, has this to say upon a certain aspect of the case:

"It has been more than once held in this circuit that courts of equity will not intervene by injunction in disputes between the owners of quack medicines, meaning thereby remedies or specifics whose composition is kept secret, and which are sold, to be used by the purchasers without the advice of regular or licensed physicians. In the present case, the so-called trade-mark, "One Night Cough Cure," asserts a manifest falsehood or physiological impossibility. A cough or cold so far-seated as to require medical treatment cannot be cured in a single night, and a pretense to the contrary is obviously an imposition upon the ignorant. If it be said that the Court cannot take notice of such a state of facts, and that there is no evidence from which the Court can infer it, we can at all events take notice of the plaintiff's evidence, whereby it is shown that the trade-mark in question was not selected because experience had shown that the nostrum availed to cure coughs and colds within the period of a single night, but because a similar trade-mark or designation "One Night Corn Cure" had proved to be a popular and taking one." In view of this deliverance from the highest court of the land, it is a matter for considerable conjecture how any of the many "sure cures," "instantaneous reliefs," etc., would fare at the hands of a tribunal which takes cognizance of physiological possibilities.

CO-OPERATIVE TRADING.

As was expected, the celebration of the jubilee year of co-operation in England has created considerable interest by calling attention to the great progress made by co-operative societies since the foundation of the Rochdale society of twenty-eight persons, with £3 as capital, just fifty years ago. The proceedings of the Twenty-sixth Annual Co-operative Congress, recently held at Sunderland, England, shows many statistics bearing upon the growth and present status of such organizations, and at the same time seem to furnish data for prophesying the good effect which co-operation may furnish in the near future in solving industrial problems, which are at present peculiarly aggravating. The report of the Central Board does not seek to disguise the fact that the last year has been a trying one for the societies, and that trade has shown a great decline. There were, however, at the end of last year 1,855 societies, with a membership of 1,298,557, an increase of nearly 60,000 members as compared with the previous year. The total investments of the societies showed an increase of nearly \$1,000,000, while the sales and profits, amounting to \$250,000,000 and \$33,000,000, respectively, show a slight decrease. The Co-operative Insurance Society showed a fund, exclusive of capital, of \$180,000,000, and an increase of eighteen societies during the year. One of the questions that came up for discussion was one which hardly ever intrudes in meetings of ordinary business corporations. It was the problem of the

disposition of the profits. The president of the congress deplored the unfortunate existence of any profit to wrangle over, and characterized profit over cost as one of the many devices originated to enable one portion of the community to appropriate the wealth produced by another. The condition was referred to as one which should not be allowed to exist in a properly conducted co-operative community. Suggestions were made that profit might be handed over to the capitalist, who supplied the instruments of production, as is done in regular trade; it might be given to the laborer, who performed the work through the means furnished by the capitalist; or it might be returned to the purchaser, who had paid the advance over cost which made profit possible; but the one aim, whatever plan should be adopted, must be the better and more equal distribution of wealth. The congress also passed a resolution condemning the practice of credit trading, it being the sense of the assembly that "the time has arrived when there should be instituted a general crusade against this perilous system, which is to a large extent crippling the influence of the movement for good; and there is no disguising the fact that, so long as credit retains its present hold among thousands, the development of the movement is immensely retarded." The most advanced co-operators were quite sanguine that the question of co-operative production would receive attention, but the discussion which was given it failed to disclose any decided trend of opinion. However, if there is any truth in the sayings which comfort us in our present way of doing business, the fact that "nothing succeeds like success" and that "money talks" may convince us that there is a great deal in the co-operative plan of trading, as disclosed by its jubilee celebration.

HINTS ON ADVERTISING AND DRESS.

Ever since the well-authenticated instance where Joseph appeared in a coat of many colors and aroused the envy of his brethren there has been a well-defined tendency among all sorts and conditions of people to pursue a similar course by striving to outdo in the matter of those things which pertain to personal appearance. But each year the requirements for entry in the universal dress parade have become more strict, until the man whom nature has not endowed with sufficient stature to tower above the crowd must exercise what brains he may possess from the average level, and use the means at his command to make an appearance which will evoke favorable attention from his fellows. This sartorial idea is one which finds illustration in the general tendency of the business of advertising. As the decision as to what the majority of people will wear always depends upon what a very decided majority are wearing, so the general aspect of advertising as a whole takes its style and force from the successful advertisement. There is nothing unnatural or strange in this. If the correct thing in that great art of attracting attention—dress—is learned by studying a fashion plate emanating from Paris or London, is it not within the range of propriety to expect that perfection in

that greater art of attracting attention—advertising—may be approached by studying those efforts in the latter line which public opinion has stamped as effective? This idea of a fashion plate for advertising is not so far-fetched as might appear. A glance at the work of our professional "ad" writers only proves the existence of its prototype. The fabric out of which these clever literary tailors are now constructing their garments is mostly "De Vinne" with varied trimmings. The cut is much the same as regards variety, even if the patterns do appear quite numerous. The range from elegant dress suit to pea-jacket is apparently great, but this is a visual error on the part of the beholder; the tailor makes a short step of it, and the printer will tell you that the difference in the attractiveness of an advertisement consists of but a few slight variations which he makes with the type in his composing stick. It will thus be seen that the connection between these two arts of attracting attention is quite marked. The methods are quite the same, and this brings us to an application of the analogies of the situation. The habiliments of the clown and the attire of the tramp, while they are conspicuous, are both out of place in the serious business assembly. Good taste and quiet elegance in attire are always in order, and command attention and respect. Therefore, always be well-dressed in your advertising efforts, and in no way can this be shown to better advantage than in the space which every tradesman should call his own in the local paper. A certain dealer in advertising space in public conveyances puts his own card alongside those of his patrons, and upon it says: "If you read this advertisement, others will read yours." While we believe that every advertiser is careful to read his competitor's advertisements, we believe that he owes a duty to himself to read the advertising of all who happen to be placed near him. He need not do this to find out what they say, but to observe their style. This may savor of the much ridiculed feminine curiosity as regards matters of dress; but a woman usually knows where to find ideas, and an advertiser should endeavor to be just as smart. A glance at a page of newspaper advertisements will show as many inequalities in dress as will an equal attention bestowed upon the throng upon a crowded street, and in the latter the well dressed receive the greatest share of attention. This glance should show the advertiser whether his neighbor's "ads" are cut and fitted properly. If they are not, a little care expended upon his own will give him an advantage. If they are last season's styles, he can consult the fashion plate for the latest designs for his own. If they are all alike—in sack coats, perhaps—let him put on his dress suit. If they never change, let him change at every appearance. In short, let him do just what the other fellows are not doing, as long as it is within the limits of good taste. It may be hinted that if every advertiser were to follow such a course the same absence of variety would soon nullify the extra effort. But there is little danger of this. Advice of this sort is like an exhortation to righteousness—there are but few that heed it.

SICILIAN ESSENTIAL OILS.

The following article appeared in the last number of the British and Foreign Confectioner:

"We have from time to time urged the need of special care in the purchase of essential oils. Recently our attention has been specially directed to the same class of goods by the publication of a most valuable contribution to our knowledge of the chemical and physical properties of the essential oils. We refer to the Pharmacological Record, in which a detailed account of recent researches on Calabrian and Sicilian essences is given by H. Helbing and T. W. Passmore, who are the best authorities on this question. They say:

"The value of the essential oils of the orange family depends so entirely upon their delicacy of flavor and odor that the services of the chemist have, up to the present, only been rarely sought in determining the nature and proportion of the several constituents, except in cases of gross adulteration. Yet it is acknowledged that no class of oils is more subject to sophistication and admixture than the Calabrian and Sicilian essences, and to such an extent is adulteration carried out that the greatest precautions have been necessary in determining the characteristics and composition of the genuine products. The great amount of attention that has been paid of late years to the chemistry of the essential oils has however, not only supplied these necessary factors, but furnished tests and methods of analysis that render the control of these oils a comparatively easy task to experts."

"Messrs. Helbing and Passmore have marked out in detail a most interesting series of experiments dealing with the constitution of certain pure samples of expressed essential oils, such as lemon, tangerine and bergamot.

"The close botanical relationship of the sources of these natural products also finds expression in their composition. The terpene hydrocarbon, limonene, is characteristic of this class of oils, and in most cases is the principal constituent. Pinene and dipentene are also generally present, but in small quantities. Limonene is distinguished by its boiling point 175 to 176 degrees C. As the boiling point of limonene is considerably affected by the presence of other bodies, it is almost impossible to obtain it in an absolutely pure state by simple fractional distillation, because traces of other volatile substances are always carried over with it. It is, however, obtained sufficiently pure to admit of its recognition by its specific gravity—0.846 at 20 degrees C. The limonene of lemon oil and its allies is dextrorotatory to polarized light, and communicates this character to the oils. Although the terpenes possess more or less pronounced pleasant aromatic odors, the peculiar odor of each oil is due to some other constituent, such as citral in lemon and tangerine oils, which though present only in small quantities, can be recognized by chemical tests. All the oils also contain a small quantity of a stearoptene or solid body, which crystallizes and is generally free from odor, though possessing a pungent taste."

Avoiding abstruse chemical details, we

may point out the general methods adopted in these experiments and the results obtained, and then very briefly indicate some inferences that may be drawn from the data obtained. The method of investigation which has been chiefly followed has been an application of the process known to chemists as "fractional distillation." This phrase may not convey a very coherent notion, but it implies broadly the separation of the oil, by the application of heat at carefully regulated temperatures into those numerous distinct bodies which have been produced in nature's wondrous laboratory. These, when united, form those bodies known in commerce as essential oils. So far as present investigations show, certain bodies of paramount importance in determining the flavor and odor of the several oils possess relatively high boiling or distillation points. This being so, there is in many cases a risk either of decomposition when the oils are prepared by distillation, or what amounts practically to the same thing, there is a great risk that certain important constituents may be left behind in the still and may not find their way at all into the oil of commerce when it is prepared by this method.

The first risk was found to occur especially in the case of the bergamot and tangerine oils, and in the former another special risk was noted, caused by the production of a very considerable percentage of acetic acid during the process of distillation, which fully accounts for the production of the peculiar green tint usually considered as characteristic of bergamot oil, but which it would now seem is almost wholly derived from the action of the acetic acid upon the copper storage vessels employed for the exportation of this oil. Wherefore those who use ordinary bergamot oil need not wonder at copper contamination being detected by inquisitive analysts. The last-mentioned risk, that of removal by retention in the still of important flavor and odor-giving constituents of the oil, was found to apply specially to oil of lemon; while in this case actual decomposition was hardly observable. Now, it seems to us that the most reasonable inference to be drawn from above is simply this: If you want to get in the fullest degree the perfect flavor and odor of essential oils, see that you get them, and do not grumble at the price; they are worth paying for, and you get full value for your money. The investigation also clearly illustrates the advantages of expression over distillation in the case of oils which possess such a delicate nature as Sicilian and Calabrian essences. In the case of bergamot and tangerine oils, the unavoidable decomposition of a characteristic constituent by heat and the formation of free acid must not only affect the flavor but also the stability of the oil, while, although lemon oil suffers no actual decomposition as far as could be observed, there is a tendency to leave the citral in the residual products of distillation.

After reading this it occurred to the United States Consul at Messina that the subject warranted an attempt to either verify or disprove the statements of Messrs. Helbing and Passmore, and to that end he addressed the following circular letter to all the manufacturers and shippers of essences in Messina:

"(1) Are there manufactured in and exported from Messina any absolutely pure essential oils of lemon, orange, bergamot, mandarin or bitter orange?

"(2) What is the lowest price (in gold) at which absolutely pure essential oils (state the kind) can be exported to the United States?

"(3) To what countries are the best grades of essential oils exported? If the grades exported to the United States are superior to those exported to other countries, please state the cause.

"(4) In the adulteration of essential oils, what are the adulterants?

"(5) If you have any brands which you will guarantee as being free from any adulterations whatsoever, will you please specify them (giving name of oil), and state if these brands are exported to the United States; and if not, to which countries they are exported?

"(6) Will you please furnish me with a list of all your brands?"

To this letter the subjoined replies were received:

From Fred. Baller & Co.—(1)—Yes; but oil of bergamot is produced only in the province of Reggio, Calabria. We add, with regard to oil of bitter orange, there is always a doubt as to its purity, manufacturers sometimes mixing it before it comes in the market.

(2) To-day's lowest prices per English pound, free on board at Messina in 25-pound jars (copper) are for January shipment: Oil of bergamot, 7s. 5d.; lemon, 4s.; sweet orange, 4s. 4d.; bitter orange, 7s. 2d.; mandarin, 19s. 7d.

(3) The best grades are exported to Paris, the United States and Cologne (Germany).

(4) Principally rectified spirits of turpentine.

(5) We guarantee our oils of bergamot, lemon and sweet orange as being free from any adulteration, and we are shipping them to the United States.

(6) We refer to No. 5.

From W. Sanderson & Sons.—(1) We hardly believe that any of the five essential oils named are sold absolutely pure by the first producers, as a general rule, excepting small quantities, which are made under special supervision of purchasers. Lemon and orange are the essences which can be the least adulterated without detection. Bergamot, bitter orange and mandarin are easier to adulterate, and require greater knowledge and sense of smell to understand what extraneous ingredients are mixed with them.

(2) It being difficult to state that an essence is absolutely pure, one can only consider as pure those which may be so slightly adulterated as to escape detection by experts in the article, and what the prices quoted in the local market reports are for such oils.

(3) The United States take the largest quantities of essential oils in the purest state, other countries also taking their share, but still large quantities of adulterated essences go to America and elsewhere, for cheapness is a great inducement to parties who have little knowledge of qualities.

(4) Usual adulterants are: For bergamot, turpentine, essence of lemon and orange (when their value is lower than bergamot, which is usually the case), and

(2.06 pounds), in copper jars of 6, 12-1-2, 25 and 50 kilograms, including packing, coast freight and insurance to New York: Essence of lemon, \$2.80; essence of orange, \$2.80; essence of bergamot, \$4.40; essence of mandarin, \$10.70; essence of bitter orange, \$3.80.

(3) I hear that of late Paris and Grasse (France), and Leipzig and Cologne (Germany), buy the best essences and pay the highest prices. In the latter country the essences are examined by Abbe's refractometer (which I have in my laboratory), and by other instruments. Some countries, like the United States, including will not pay high prices, and a number of shippers supply them with the adulterated essences.

(4) It is said that many shippers adulterate essences of lemon and orange with oil of turpentine and "olio de colza," and that essence of bergamot is adulterated by common essence of lemon and orange. My registered trade mark is "Marca Siciella" and "Zest" quality of all oils mentioned is, as indicated before, absolutely pure. Same is exported to the United States, Germany, England, Sweden, Norway, Netherlands, etc.

(5) I have only the brand "Marca Siciella" and "I Zest" quality manufactured by myself and "I quality," bought up; for the latter cannot therefore guarantee absolute purity.

From Cailler, Walker & Co.—(1) From Messina a great deal of pure essence is shipped, but we doubt if any goes to the United States.

(2) The prices ruling to-day (per pound, cost and freight to New York), are: pure essence of lemon, \$1.25; \$1.20; essence of bergamot, \$2.15; essence of sweet orange, \$1.35; essence of bitter orange, \$1.50. It must be well borne in mind that this year prices are exceptionally low, and it is not worth the while to adulterate oils. Last year prices were nearly double, and two years ago they were three times the present value.

(3) The only safe way to purchase essence is to pay the full value and to intrust the orders to old, well-known, respectable firms, who are well placed in the districts where the best essences are produced and have competent purchasers. So far, in the United States, it has generally been the habit of buyers to stick principally to cheap prices.

(4) It is generally known that essence is adulterated with oil of turpentine and mineral colza oil, and we are not aware of any other way.

(5) The real pure essence we can guarantee as free from any adulteration. It is made under our strict supervision, and rigorously corresponds to the requisites which modern science has found to distinguish the adulterated essence from the pure, which must be:

Essence of lemon: Specific weight, 0.857, 15 degrees C.; Opt. rotation, plus 62 degrees 100 mm. tube; index of refraction, 1.476, 20 degrees C. Essence of bergamot: Specific weight, 0.860, 15 degrees C.; Opt. rotation, plus 9 degrees to 15 degrees, 100 mm. tube; index of refraction, 1.470, 20 degrees C. Essence of orange: Specific weight, 0.866, 15 degrees C.; Opt. rotation, plus 96 degrees 100 mm. tube; index of refraction, 1.474, 20 degrees C.

The above is the "Super Zest" quality, which we mark with a shield against an anchor. This mark is very much appreciated in France, and also in England and Germany, where they pay its value. We must make you observe that the essence industry is exercised by a lot of small manufacturers and farmers, from whom we purchase the essence, advancing them funds to buy the necessary fruits. The large works, which several exporters boast of having, and the fancy pictures which are painted on show cards, exist only in the imagination of the advertisers, and are only what French call "reclame."

From Glov, Restuccia & Co.—The best grades of essential oils are manufactured

in the neighborhood of Messina, and we, as the oldest and largest manufacturers of the same, supply only the best qualities to all consuming markets. Our brand is well known, and particularly in America, on account of the particular purity and fragrance of our essential oils expressly prepared for flavoring purposes, so that no other inferior essence is shipped from us.

The more or less purity of the essence accrues only from the difference in price. It is not being possible to send very fine goods at very ridiculous figures, and, willing or unwilling, the goods must be mixed up with turpentine. This sort of adulteration is imported from France, and most American firms are now well acquainted with such adulteration, our custom being to send off only the best grades of essences of our make, the same being purchased by all our numerous clients of Germany, France, America, India, Canada, Japan, Australia and the United Kingdom.

From Fratelli de Pasquale & Co.—(1) We can say that there are manufactured in and exported from this town some absolutely pure essential oils of lemon, orange, bergamot, mandarin and bitter orange, but not a large quantity, owing to the keen competition that offers below the first cost, and generally buyers abroad are very rarely willing to pay the right price. Moreover, it is a recognized fact that the majority of importers prefer an adulterated quality to a genuine one, for the simple reason that an essence mixed in a certain proportion of turpentine gives a stronger smell and keeps longer than a pure essential oil, particularly if the latter is not corked and light and air excluded.

(2) The lowest price (in gold) at which we can sell absolutely pure essential oils per English pound, free on board at Messina and all expense included, and payment after arrival and approval of goods at buyers' risk, is as follows: Lemon, \$1.20; bergamot, \$1.85; orange, \$1.30; bitter orange, \$1.85; mandarin, \$5.

(3) The best grades of essential oils are shipped to Great Britain and colonies, mostly lemon and orange, used by the aerated water, cordial, confectionery and perfumery trades. Next we have to mention the French perfumers, who buy the finest bergamot oil, as they are very particular about quality than price. There is also Russia and the United States, where a large quantity of the finest essential oils are exported. In a word, we have to conclude that the best grades of essential oils are generally preferred by buyers who have to employ them in their own products, and not by buyers who have to resell to the trade, as the latter prefer a low price rather than an extra fine quality.

(4) In the adulteration of essential oils the adulterant mostly used is turpentine, much of such purified and perfumed, which is not believed to be deleterious at all.

(5) We have some brands, which we guarantee as being free from any adulteration whatsoever, viz.: "Cedar," oil of lemon, meaning pure oil of lemon; "Rose," sweet orange oil, meaning pure oil of sweet orange; "Carob," bergamot, meaning pure oil of bergamot. We are glad to say that such were awarded the highest prize at the World's Columbian Exhibition, and that the warmest expressions of admiration and favor reach us daily from the trade, particularly from Great Britain, where said essential oils are extensively introduced.

There are now some prominent houses in the United States which appreciate the superiority of our absolutely pure essential oils, which are distinguished from others by their delicious aroma, that recalls the fresh fruit.

However, as we see that some competitors of ours are offering their oils under our above-mentioned denominations, we have been compelled to make a new brand

representing the "Port of Messina," which we are going to have registered, to guarantee the trade against any spurious imitation. In fact, any absolutely pure oils shipped by us will bear henceforward said new label.

(6) The following are all our remaining brands, viz.: "Super Oil Lemon," "Super Oil Bergamot," "Super Oil Sweet Orange," "Super Bitter Orange" and "Mandarin."

From Ig. Siles.—(1) Pure essential oils are exported to the United States, as also adulterated ones, this depending upon the respectability of the exporting firm.

(2) The prices of essential oils, like agricultural produce, being subject to variations, have no fixed value. The price can only be fixed on the day the business is transacted. For example, we quote to-day: Bergamot, 7s. per pound; lemon, 7s. 10d. per pound; sweet orange, 4s. 2d. per pound; bitter orange, 7s. per pound; mandarin, 2s. 4d. per pound.

(3) Pure essential oils are exported to all countries in the same way as adulterated oils, more or less according to the demand, and also according to the knowledge of buyers. Pure essential oils find a larger market in France, Germany and Holland; less in other countries, especially in England and America.

(4) The adulterants are various; (a) rectified essence of turpentine and other similar oils; (b) essential oils of the same kind that have an inferior value; (c) the essential oils which cost less, produced by distillation of the dregs.

(5) My essential oils are not known under a special brand. The brand is given by the importing firm, having the cases branded with its own initials.

"My firm has for trade mark a comet and the initials 'I. S.'" I export only one quality, pure essential oils and nothing else, and refuse all orders for inferior qualities.

Mr. Moore, of the firm of Ogston & Moore, chemists, of London, who was sent to Messina by English importers for the special purpose of ascertaining all facts relative to the adulteration of oils, said: "In reference to your inquiry as to whether there is any method for the detection of turpentine in essences, until now there has been no reliable test, the difficulty in regard to essence of lemon being that it is of nearly the same specific gravity as turpentine, and also from the fact of their being nearly related to each other inasmuch as they both belong to the family turpeneae."

"Since our opening of a branch here, some eight months since, we have given the matter a great deal of attention. Through our being on the ground we have been able to obtain much information regarding the materials used for adulteration; also pure essences made under personal supervision for use in our investigations. We are now able to give analyses of essence of lemon and orange. In the future we shall carry on our experiments with bergamot and others. Your moving in this matter has caused a stir in the market already, and one firm has commenced to sell essences on analysis, and we take their samples ourselves from the coppers and afterward seal them with our own seal. We may state that the principal merchants are anxious to sell on analysis in order that the pure material may realize its proper price. They have given us much valuable information, and under these favorable circumstances we have been able to devise tests that in future we can rely upon as giving accurate results."

The above correspondence (which embraces every manufacturer and exporter of prominent brands) varied as it is in both facts and figures, points to one conclusion at least, and that is, in the words of the Confectioner, "If you want to get in the fullest degree the perfect flavor and odor of essential oils, do not grumble at the price."

STRAY THOUGHTS ON ADVERTISING.

Putting flippancy aside, however, and descending to the practical, everyday bearing and value of advertising to men of the type of the average chemist and druggist, the first fact that must present itself—and a very hard fact it is—is the very evident division which has recently taken place in what used to be known as the business—sometimes even profession—of pharmacy. In the days that elderly pharmacists love to look back upon all the advertising was done inside the bottle and packages—good physics was its own recommendation. A little later, remunerative outlets for large amounts of capital began to get scarce and large sums were invested in putting on the market and advertising proprietary soaps, medicines and toilet requisites of all kinds. Chemists stocked these articles, and, because they were fairly profitable and easily sold, even went so far as to "push" them. Certain of the more knowing members of the craft, and many who were not craftsmen at all, soon found out that by selling the most widely advertised of these proprietary articles at cost price they had one of the cheapest and most effective forms of advertisement. They attracted the public to their establishments, and once there, it followed, as a matter of course, that they sold to them some of their own articles, the profit on which recouped them for loss—in the form of interest on unremunerative stock—sustained on articles sold at cost. In this way the small advertiser gets his advertising done for him by the big advertiser. This kind of advertising was so simple and inexpensive that there was a "run" upon it. The result is that now only men with both capital and resource can hope to achieve any degree of success by this method. When the method was in its infancy each man had his special "cut." Now there are so many at it that everything is "cut," and very large unremunerative stocks have become a necessity. Good dividends are all earned by working a profitable "own specialty" trade in conjunction with an unprofitable patent-medicine trade; but much more capital, energy and resource are required now than when the method was younger.

A more modern innovation in the direction of the large advertiser doing the small advertiser's advertising for him is one in which the large man does the small man's printing—that is, prints for him free, bills recommending his specialties—the large man's specialty occupying, however, the best position on the bills. From the capitalist's point of view this is undoubtedly good business, because for a very slight outlay he secures the retailer's goodwill and thus induces him both to stock and push his articles. To the retailer, however, who has studied the recent history of the retail drug trade and who has, occasionally, a balance of 5s. to spend on his own handbills, such a policy must appear nothing short of suicidal. It may be said here that there are many special articles which it does not pay a retailer to get up labels for and spend time in wrapping, and that it is only the well-got up article which sells. Quite true; but there are now many enter-

prising wholesale houses who make a trade of getting up articles in this way, and who are altruistic enough—a matter of policy again—to let the retailer sell these as his own; they will even put his name on for him, if he gives a large enough order, and at a small cost will print his bills for him without giving the premier position to their own nostrums.

It is the boast of a well-known firm of vinegar makers that they only advertise inside their casks. The truth underlying this boast should not be lost sight of, especially by pharmacists, but at the same time a little judicious advertising outside the cask never makes the contents any worse. Every retailer with any capital at all can do a little advertising with great benefit to his business. When it becomes a question of trying to put before the general public a specialty which has sold well locally, he has no chance against the large advertiser, with his staff of experts, both in writing and placing advertisements, and his efforts in this direction are almost sure to end in failure. If, however, he studies the wants of his locality and lays himself out to supply them, with a due amount of tact and energy he will find that at a small risk of capital he can soon build up a profitable trade in his own manufactures. Courtesy at the counter, constant attention to business, a smart-looking shop, a nicely dressed window, attractive labels (never allowed to get soiled), are inexpensive methods of advertising, and when backed up by well-written handbills, cheaply distributed by wrapping round every pack of goods sold, seldom fail to bear fruit. I have sometimes thought that chemists might, with great advantage from an advertising point of view, sell more articles in common demand than they generally do—articles now mostly relegated to grocers, but which, from the fact that everybody uses them, even in bad times, are invaluable vehicles for advertisements. Even from a West End point of view there would be nothing unpharmaceutical in a chemist selling his own brand of tea, pepper, blacklead, mustard, starch, laundry soap and rice, especially if he became noted for it; the public is a better judge of these than of drugs, and would naturally conclude that the man who sold good tea would be sure to sell good drugs; and whatever may be said of the cumulative nature of newspaper advertising, there can be no doubt of the cumulative nature of this kind.

The relation between advertised medicines and quackery is so close that I may be pardoned for referring to one bearing of the subject. Certain leaders of the medical profession have recently been very busy decrying quackery and reading sermons to editors of lay journals on the sin of admitting quack advertisements. While admitting that there is a great deal of criminal quackery perpetrated through the medium of public journals, I think that it must be patent to every thoughtful pharmacist and medical man that this is a subject on which it is not advisable to dogmatize. The pages of the medical journals themselves—even the most exclusive of them—are not always what Caesar's wife ought to be, and this applies to their literary matter as well as to

their advertisements. People who live in glass houses should not throw stones.—From paper read before the Sheffield Pharm. Soc. by G. A. Grilerson. (The Ch. and Dr.), April 14, 1894.

Dr. Salmon, Chief of the Government Bureau of Animal Industry, is credited with the remarkable statement that, if all the cows affected with tuberculosis were killed, milk would cost as much as champagne.

THE SOURCES AND APPLICATIONS OF BORAX.

By E. L. Fleming.

Borax is a white, crystalline substance, peculiar to the mineral kingdom; it is a very mild alkali, of a pleasant, sweetish taste, and it is not injurious to the human system; it is freely soluble in water; its solution acts as a solvent for resins, albumens, fatty acids and certain organic bodies that are not soluble in water alone; but it does not appear to attack fibers, membranes, tissues or skin. In the crystalline state or in solution it is very easily decomposed by such acids as tartaric acid or acetic acid; but in its calcined or anhydrous state, when fused, the boracic acid it contains acts as a more powerful acid than even sulphuric acid. Borax in the crystalline state contains 47.1-4 per cent. of its weight of water, to which it tenaciously adheres at the ordinary temperature of the atmosphere, time seeming to have very little effect upon its character. At the boiling point of water it slowly parts with nearly the whole of this water, and if the process be conducted quickly, at a still higher temperature the borax swells to several times its size, becoming a body of a light and porous nature, which may be crushed to a compact powder. At a higher temperature than 450 deg. Fahr. it melts to a clear glass, which remains transparent on cooling. Though the applications of borax are not generally known, as a fact this interesting and valuable salt will be seen to be utilized in different ways by several industries.

For goldsmiths a special grade of borax is prepared, called jeweler's borax, in pieces as solid and free from cracks as possible, so that when rubbed on a slate with water it is not liable to fall to pieces, but will gradually wear away until too small to handle conveniently, when the small pieces are put on one side, to be used as a flux in melting or collecting.

An enameled coating for cast-iron and steel as well as copper is made by fusing on the metal a mixture of quartz, feldspar, clay and borax, and then covering it with a glaze containing borax. It is thus extensively used in the manufacture of enameled iron mantelpieces, made to represent the rarest marbles, and in the great variety of enameled signs and hollow ware. Borax is also used in conjunction with infusorial earth for lining fire-proof safes, for being a salt that contains nearly 50 per cent. of its weight of water of crystallization, with which it parts at a high temperature in the event of fire, the steam arising from the heated borax permeates the books and papers in the safe and prevents their being burnt. For this purpose it is superior to alum, which is an acid salt, and has a tendency to corrode the iron. At a red heat the boracic acid in borax readily dissolves and unites with metallic oxides, forming a fusible glass, which property renders borax of great use in conjunction with other fluxes, for certain mineral and metallurgical processes.

In brazing copper it is used for cleansing the parts to be joined, on account of the property it possesses of dissolving the oxides that form a film upon the metal.

It is very extensively used in the manufacture of copper pipes and for other purposes.

In welding iron and steel together, it answers the same purpose. Machinists and others use the crystal for chilling the iron to the right temperature, for the purpose of case hardening or tempering different portions of machinery or implements to the desired degree.

Borax has recently been applied with considerable success to the manufacture of optical glass at Jena. This glass has very high refractive properties, and has been very successfully applied to the manufacture of lenses for microscopes and for photography.

Borax is now used in glazing china and earthenware so extensively all over the world that the consumption in these industries at the present time exceeds any of the others. The principle adopted is to form a fusible glass of borax and other materials, and fuse it on to the baked earthenware. Many formulae have been published of the composition of this frit, but almost every large firm have their own formula.

In the manufacture of Parisian cement the borax is added for the purpose of enabling cement, when set and molded, to take a polish.

In the chemical industries it is used in the manufacture of soap, colors, dyes, saltery and cosmetics; also in photography and timber preserving.

There are many kinds of borax soap. From all accounts, its use in this industry arose from the fact that the linen of Holland and Belgium became celebrated on account of its superior whiteness, in the cleansing of which borax was used as a soap powder; hence we find that dry soap, soft soap and toilet soaps are now made with it.

In the manufacture of colors borax is used, and in the preparation of borate of chromium, a pale green powder, and borate of copper, a darker green. These are used as substitutes for arsenical green in painting and dyeing.

In drysaltery it is used in the shape of borate of lead and borate of manganese. Both these products are used in the manufacture of varnish (as driers). The borate of lead is used for the palest varnishes, and the borate of manganese in other varnishes.

As a cosmetic, it enters in the composition of many preparations for the hair, the face and the hands.

Photographers use it in the toning bath, to govern the action of chloride of gold, which is dissolved in conjunction with it.

In the preservation of timber it is used for dissolving the albuminous resinous matter, or the sap, which readily decays, leaving only the tough fiber.

Borax dissolves casein, forming a substance which can be used as mucilage.

In silk it serves for dissolving the glutinous matter adhering to raw silk. In calico printing it is used for fixing certain colors as a mordant.

Laces, muslin, tulle and other light fabrics steeped in a solution of borax are rendered fireproof.

Hat manufacturers use borax for dissolving shellac to form a stiffening for

felt hats made of wool. A weak solution of borax is used after the felt body is proofed, to wash from the surface any excess of stiffening not required upon the face of the felt.

Candle wicks are prepared with a solution of borax. Its use is to cause the wick to curve in burning, and at the same time to vitrify the ash. It also prevents the wicks from burning too rapidly, and obviates the necessity for snuffers.

In the leather industries it is used in curing and preparing skins, by leather dressers and leather dyers.

It is used as a mordant in dyeing leather with aniline colors, and also in polishing a little borax in the blacking or coloring is added to enable the iron used in polishing to pass freely over the leather. It prevents the iron sticking and increases the glaze.

Pork packers use powdered borax for sprinkling over hams and bacon. Thousands of tons of meat are thus annually preserved in America.

Fish curers use a mixture of boracic acid, alum and salt for keeping herrings fresh. The principal seat of this industry, so far, has been at Hangoesund, near Stavanger, in Norway.

Having thus practically demonstrated its usefulness, let us turn our attention to the sources from whence it comes. England has no borax fields or mines, and at present the material, either in the manufactured state or that from which it can be manufactured, comes from Thibet, Italy, Chili, California and Asia Minor. Thibet is the most ancient source, and under the name of "tinca," borax is brought from the neighborhood of Yam-dokho to Calcutta, from which port the source or origin is distant between 400 and 500 miles, almost direct north. At the present time there is railroad communication as far as Darjeeling, or a distance of 300 miles.

There is also a borax refinery at Jagadhri, thirty-seven miles southeast of Umballa, in Northern India, all the borax which is exported from India being brought from the trans-Himalayan region.

The manufacture of borax, as far as England is concerned, divides itself into two classes—the manufacture of borax from boracic acid and that from sesquiborate of lime and double borate of lime and soda.

The mere refining or recrystallizing of crude borax requires no skill at all. The manufacture of borax from boracic acid imported from Italy involves several processes. The sulphates of ammonia and magnesia have first to be washed out of the crystallized acid, and this is effected by reason of their superior solubility. The boracic acid is then boiled in large iron pans, with the requisite amount of carbonate of soda, the impurities allowed to subside, and the clear liquor run to large iron vats to crystallize. This first borax is not pure enough for commerce, and requires a second crystallization.

The impure borax liquors are boiled down, and upon reaching a strength of 60 degrees Twad., or 1.300 specific gravity, are allowed to recrystallize and throw down a further crop of borax. Before the mixture reaches a temperature of 80 degrees Fahr. it is drawn off into other

vats to allow the sulphate of soda to crystallize out, and finally the liquor is raised to the boiling point, and concentrated, in order to get rid of the common salt.

Borax manufactured from boracic acid is liable to be tinged with various colors, such as black, green or yellow, on account of impurities contained in the acid or the soda ash, and which are due to the presence of sulphides or oxides of iron. In order to overcome this difficulty the borax is bleached when in a state of solution.

The manufacture of borax from boracite, colmanite, or ulexite presents a new feature that does not appear in the manufacture from boracic acid, and that is, that when any of these minerals are reduced to a state of the finest powder, and boiled with carbonate of soda, what is known as borate of soda, as well as biborate of soda, is formed.

The biborate of soda or borax crystallizes out in the ordinary way, but the borate of soda remains as a thick, syrupy liquor, which has to be decomposed either with carbonic acid, boracic acid, or bicarbonate of soda. If this is not done, loss is apt to occur, and the full strength of the mineral is not obtained.

With such abundant supplies of borate of lime throughout the world, it becomes a question of transporting the boracic acid it contains in as concentrated a form as possible, especially in those regions where the quality is but poor, and, therefore, many plans have been devised. One of the simplest is what is known as the sulphurous acid process, and this is to be preferred to others on account of the small quantity of sulphur required to extract the boracic acid.

The process consists in burning sulphur, and injecting the sulphurous vapors into the decomposing vessel, where the borate of lime is kept in a state of agitation and suspension in water.

Only one ton of sulphur is required to produce five tons of acid, and the saving effected in cost of transportation, where it takes two or even three tons of borate of lime to produce a ton of boracic acid, requires no recommendation.

Various estimates have been made of the consumption of borax throughout the world, and one of the methods of ascertaining this is by referring to the productions of different countries and converting the different materials in their equivalent of borax. We thus find the production to be as follows:

	Tons.
Asia Minor	8,000
Thibet	2,000
Italy	3,000
United States	6,000
Chill and Bolivia.....	3,000
 Total	 22,000

As the American and Asia Minor supply has been developed within the last twenty years, it will be seen that the uses of borax, to the extent of 14,000 tons per annum, have increased during that period nearly 300 per cent., and it may be taken for certain that its uses will still further extend.—Chemical Trade Journal. (Reprinted from Br. & Col. Dr.)

INFECTON AND CONTAGION.

The fact that much alarm and disturbance are continually being caused by the application by the laity of the rather inexact terms "contagious" and "infectious," as used by the medical profession, led the New York Academy of Medicine, at a recent meeting, to consider the question of adopting a more exact nomenclature for the different classes of infectious diseases. It was acknowledged that the erroneous ideas which the public associate with these terms were largely due to their careless use by the profession itself, and it was hoped that a more exact knowledge of the terms on the part of the public would do much to allay those vague fears which are the generators of panics. As a possible means of assisting in this movement the following classification of infectious diseases, as submitted by Dr. William H. Thomson, is presented: "(I.) All infectious diseases are due to the presence of their specific living micro-organisms in the body. (II.) Infectious diseases are divisible into three classes, viz: (1) Communicable, (2) non-communicable and (3) the septic. (III.) The communicable diseases are those whose origin is from an animal body. Examples are smallpox, Asiatic cholera and tuberculosis. (IV.) The non-communicable diseases, those whose origin is not from an animal body, but from a place or thing. Examples are ague, yellow fever and miasmatic diseases in general. (V.) The septic infectious diseases are those in which the infection enters through a wound or inflamed skin or mucous membrane. Examples are erysipelas, hydrophobia, tetanus, etc.

"Communicable diseases are subdivided into two classes, viz: Contagious and non-contagious. The contagious are those in which simple proximity to the infected is sufficient to communicate the infection to those susceptible to it. Examples are typhus fever, scarlet fever, measles, mumps, whooping cough, etc. Isolation of the sick is therefore needful to prevent infection. The non-contagious are those in which the communication is not by simple proximity to the sick but due to intermediate means of communication. Isolation is, therefore, neither needful nor effective, in comparison with measures directed against intermediate means of infection. Examples are typhoid fever, Asiatic cholera and tuberculosis." In commenting upon this classification Dr. Thomson says that "this classification if correct is of advantage, because it is intelligible to ordinary readers. All infectious diseases can be prevented by measures of disinfection applicable to each, and when all infections are understood to be due to living micro-organisms, all vague ideas about their relation to poisonous chemical, physical or atmospheric instrumentalities, will give place not only to better ideas of what infection is, but also to what disinfection implies. The term communicable seems particularly advisable to designate every disease whose origin is from some animal body previously infected, because this term will fasten in the mind the fact that no case of such disease has any other cause than such communication. The term 'contagion' is particularly repugnant to most

people, and to have a chronic disease like tuberculosis looked upon as contagious would be very undesirable. It was a serious discredit to our profession, as well as to our civilization, when the steamer *Normanna* was quarantined in our harbor recently, as if cholera was a contagious disease, and its passengers treated as we all remember."

A clearer understanding of these distinctions, while it may not prevent the spread of what the public sometimes designates as "taking" diseases, it will do much to allay the alarm which follows the varying interpretations which the laity places upon terms which the medical profession uses quite freely without due care that their meaning is correctly understood by the public.

COLOR HARMONY.

The following general rules on color effects in window dressing are taken from a trade catalogue:

- Red and violet do not accord well.
- Orange and yellow accord incomparably better than red and orange.
- Orange and green do not accord well.
- Orange and violet accord passably.
- Yellow and green form an agreeable combination.
- Greenish yellow and violet blend nicely.
- The arrangement of yellow and blue is more agreeable than that of yellow and green, but it is less lively.
- Green and blue produce an indifferent effect, but better when the colors are deep.
- Green and violet, especially when light, form a combination preferable to green and blue.
- Orange yellow, when placed by the side of indigo increases its intensity, and vice versa.
- Red and green intensify each other.
- Yellow and indigo combine perfectly.
- Red and orange do not accord well.
- Red and yellow accord pretty well, especially if the red is purple red, rather than scarlet, and the yellow rather greenish than orange.
- Red and blue accord passably, especially if the red incline rather to scarlet than crimson.
- Blue and violet accord badly.
- When two colors accord badly together, it is always advantageous to separate them by white.
- Black never produces a bad effect when it is associated with two luminous colors.
- Black and white sensibly modify bright colors.
- White gray never exactly produces a bad effect in its association with two luminous colors, yet in most cases its assortments are dull.
- Blue, when placed by the side of orange, increases the latter's intensity, and vice versa.

The appeal taken by Richardson & Co., from the decision of the English courts in the celebrated Lanoline case, the particulars of which were given in *The Era* of January 15, has been decided in favor of the plaintiffs, Benno, Jaffe & Darmstaedter Lanolin Fabrik. The chief justices held that the patent covered a new product, differing greatly from the ancient product called "oesypus."

TRADE NOTES.

Cushman's Menthol Inhaler is one of the few articles which sell themselves. A few seconds' trial by customers who are afflicted with headache, neuralgia and ailments of the air passages usually settles the question of buying in the dealer's favor. Mr. Cushman is a liberal advertiser through the retail drug trade, and every druggist should investigate his latest advertising offer.

A careful inspection of the leading magazines and periodicals of the day will disclose the fact that the public is having its attention called through the medium of attractive advertising to Mellin's Food. This is one of the surest indications that the article in question is enjoying a good sale, and that the druggist will share the benefit. Keep in touch with the Doliber-Goodale Co., Boston, and watch their advertising.

The regular soda fountain patron (and he is the person you are striving to please) is always on the lookout for something new. In the case of Red Maltese Orange Juice, it will certainly please. It is a new one, delicious and refreshing. It is made by Smith & Painter, Wilmington, Del.; is put up in full quart flint bottles, and all wholesalers sell it at \$5.50 per dozen. One part of juice to three of syrup is the proportion for its use.

Druggists, manufacturers and colleges all have occasion to use stoneware in the shape of jugs, acid jars, ammonia jars, acid pitchers, etc., and when the question arises of where to buy such articles the New York Pottery Co., of 503 West 21st st., New York, should not be forgotten. Their catalogue, covering a very complete line of such goods, will be sent upon application, and will prove of value to intending purchasers.

This is the season for bugs and "Bug-line." The druggist should come to the aid of the housewife who is preparing for the annual struggle with roaches, bed-bugs and other insects, and he can do this quite effectually by keeping Bugline in stock. It is non-poisonous to human kind, retails for 25 cents, costs \$1.75 per dozen and gives satisfaction. See list of jobbers who handle it in advertisement of Iron City Chemical Co. in this issue.

Although purchases of naphthaline for the trade of the coming season have received due attention on the part of large dealers, a replenishment of stocks is a necessity which is constantly liable to arise. As Schoellkopf, Hartford & MacLagan, 3 Cedar street, New York, are headquarters for all grades of this product, their special prices on the same should be in the possession of all prospective buyers.

The Albany Chemical Company of Albany, N. Y., call the attention of manufacturers, wholesalers and retailers to an important line of specialties, which they advertise in this issue. The extent of this firm's manufactures and the uniform high quality of their products renders an acquaintance with their goods quite necessary to those who desire to keep fully posted upon all the features of the chemical and pharmaceutical market.

As in everything else, the efficiency of empty capsules depends upon the care exercised in making them. The United States Capsule Company, Detroit, Mich., use all precautions possible to render their product of uniform size and perfect cut, and they assure the drug trade that specifying "U. S." on all orders for such goods will result in complete satisfaction in dispensing.

The Syracuse Drug Co., Syracuse, N. Y., has sprung a surprise upon the flies for the coming season. Assuming that a fly never misses the opportunity of alighting on every uncovered dish in sight, they have fixed a utensil of this sort for the discomfiture of our Summer pests. An advertisement on page 7 shows what this new flycatcher looks like, and the prices quoted show that "Fly Plates" are profitable goods to handle.

The compressed block is now recognized by all retailers as the most satisfactory method of selling camphor. The Trefold brand, manufactured in Japan by the Japan Camphor Co., received a medal at the World's Fair, and is giving excellent satisfaction to all who are handling it. Inquiries directed to David Nash, 76 Broad street, New York, will bring full particulars regarding this brand, with prices on the same.

Are you acquainted with the utility boxes manufactured by Fred N. Burt, Buffalo, N. Y.? They beat wrapping paper and are nearly as cheap. They are just the thing for goods usually retailed in bulk, such as charcoal, borax, Rochelle salts, cream tartar, potash, alum, etc. Plain but neat labels are furnished for these boxes at very low prices. Sizes from one ounce to two pounds are always kept in stock. Send for circular and prices.

One assurance of the success of a medicinal preparation is the attempt made soon or later to imitate it. No one cares about an imitation of a poor article. The advertisement of Charles Allen Reed in this issue shows that Calisaya La Rilla is a popular preparation. It is handled by all wholesalers, and the demand for it has become so great that a western depot has been established with E. H. Buehler, 108 Randolph street, Chicago.

The Supreme Court of Rhode Island holds that every combination in trade is not illegal, even though such combination may have the effect to diminish the number of competitors in business. Monopolies are liable to be oppressive, and hence deemed to be hostile to the public good. But combinations for mutual advantage, which do not amount to a monopoly, but leave the field of competition open to others, are neither within the reason nor the operation of the rule.

The National Folding Box and Paper Company, 16-13 Reade street, New York, claim not only to be the largest manufacturers of folding paper boxes in America, but claim that this fact enables them to turn out the best of goods. They do not desire to make such claims without support, but offer to send samples of their work and prices on the same to demonstrate the truth of their statements. See their advertisement on front cover of this issue.

Extend your business by extending the facilities for doing it. One of the methods for doing this is to keep on hand a supply of the liquid mailing cases manufactured by the United States Mailing Case Co., of Boston. With these, orders from a distance can be filled quickly and satisfactorily. Manufacturers who desire to extend the scope of their operations by sampling the trade will find these cases just the thing. Send for price list and circulars.

Rhode's Kumyss finds appropriate medicinal application at all seasons of the year, but the diseases incident to the summer season always create an increased demand for it at such times. It is also in considerable request by many who find it an agreeable beverage during warm weather. R. E. Rhode, 504 North Clark street, Chicago, will be pleased to furnish the trade full information regarding the therapeutical properties of his preparation. See prices in advertisement in this issue.

A suppository machine, to be satisfactory, must be simple in construction, and compact, easily and quickly operated, and must turn out smooth and solid suppositories. This is the kind of a machine to which Whitall, Tatum & Co. call the attention of the trade in their advertisement in this issue, where will be found a detailed description of its workings. The price is but \$9, each machine being furnished with moulds for turning out three sizes of suppositories and for making bougies.

The Dawes Manufacturing Co., Pittsburg, are making a special offer on shop bottles which should not escape the attention of those who are aware that their shelves are not looking as attractive as they ought. To the pharmacist just starting in business the opportunity is offered for obtaining a complete outfit at a greatly reduced price. Samples of any of their six styles of bottles will be sent, labeled on receipt of 25 cents, and illustrated sheets of lettered prescription vials will be sent upon application.

If you make suppositories, bougies, camphor ice, cosmetics, tooth and toilet powders, pills, etc., A. H. Wirtz, 913-917 Cherry street, Philadelphia, can furnish you the necessary apparatus for their manufacture, and can also furnish you with a very complete line of collapsible tubes, bottle stoppers, etc., to put the goods in attractive shape for sale. Every druggist should have Mr. Wirtz' catalogue of metal specialties for the drug trade. It will be found a valuable aid as a guide in ordering such goods from the jobber.

AN OPINION ON "SILENT SALESMAN."

Messrs. John Phillips & Co., Detroit, Mich.

Dear Sirs: Your shipment of thirteen "Silent Salesman" show cases arrived a trifle late, though we are aware through no fault of yours. We are well pleased with them in every particular, and will cordially recommend your cases whenever and wherever we find the opportunity to do so. Very truly yours,

HACKETT, CARHART & CO.,
Broadway, cor. Canal st., New York.

Duroy & Haines of Sandusky, Ohio, who are well and favorably known to the drug trade through their famous Duroy Wines, have placed a new product upon the market, which the trade will find admirably suited to the demands of a large class of customers. It is called "Vini-Claro," and consists of Duroy claret, to which is added pepsin in the proportion of one grain to the ounce. This forms a delicious tonic and stimulant, valuable in all forms of dyspepsia. Send for free sample and mention The Era.

If you want to know "Who we are; what we are; where we are," the Cudahy Pharmaceutical Company of South Omaha, Neb., will send you a little book bearing the above title. It describes all the various products of the company, including their latest, the "Hot Weather" sellers, Cudahy's Wine of Beef Peptone and Lime Juice and Pepsin. The latter has been put up especially for soda fountain use, the strength of the lime juice being doubled. Samples of both these preparations will be furnished upon application.

As every physician has a few combinations or prescriptions which are acknowledged favorites, so nearly every manufacturing pharmacist has some particular preparations upon which he has devoted extra attention and experiment until they become specialties and closely identified with the names of their originators. The Searle & Hereth Company of Chicago have a number of this class which are well worth attention. Among them are Trinita, Thymenol, Calocelat, Chloro-Kaline, etc. Full literature bearing upon the application of these preparations will be furnished upon request.

If you buy your ice cream for dispensing at the soda fountain you ought to be interested in the Bradley Ice Cream Cabinets, which are convenient for dispensing and keep the cream in good condition from 12 to 24 hours. If you make your own ice cream, you might as well make enough to supply all the families in your neighborhood, in which case the Delivery and Family Cabinets made by the same firm ought to interest you. A request sent to the Bradley Manufacturing Co., 218 George street, New Haven, Conn., will bring you full descriptive circulars and price lists of these cabinets.

COMBS and BRUSH

CASES.

Nearly everything that can be of service to the druggist and can be fashioned of wire is manufactured by the Philadelphia Ornamental Wire Company, 18 North Sixth street, Philadelphia, and their new catalogue shows an interesting array of such articles. When you write for this it might be well to make inquiries regarding the Handy Pocket Parcel Carriers. Their simplicity and usefulness will recommend them to the public, and they are cheap at 10 cents.

Novelties always command the attention of the public, but in choosing such the dealer should try to obtain those that are seasonable. The new advertisement of Billings, Clapp & Co., Boston, in this issue, calls attention to just this kind of goods. People now want lemonade and root beer, and their pleasurable surprise at finding that such things are now put up in tablet form will undoubtedly lead to large sales of the "Ideal" tablets of lemonade and root beer which this firm is now putting up. Ten cents will bring you sample tubes of both kinds. In writing for them mention The Era.

One great requisite for a proprietary preparation is an attractive or "taking" name, which should, above all things, be one which the public can easily pronounce and as easily remember. This must be one of the causes which have made "Flag Salt" popular. The prices on this article also commend it to the drug trade. Two dollars procure one dozen 25-cent boxes, one dozen ten-cent packages and 75 samples, by express, prepaid. The samples sell the goods, which net \$4.20. Write to the Flag Salt Remedy Co., Savannah, N. Y., for sample box, which is sent free of charge.

Although your decision may be "hanging fire" on the question of a new soda fountain for this Summer's trade, it is not too late to get in readiness for the best part of the season. The John Matthews Apparatus Company have made special preparations to take care of orders which may come in late, and their facilities, both in manufacturing and distributing their goods will enable them to put their fountains in shape upon short notice. If still in doubt as to what apparatus to buy, examine the "Matthews" or send for the firm's 1894 catalogue, which is sent free, express prepaid, to any established business house.

The profit which the retail druggist is enabled to make by putting up his own toilet preparations is one which depends to a great extent upon the materials and containers which he uses. A great deal depends upon the attractiveness of the latter for the public, and a great deal also depends upon the prices which the druggist has to pay for such articles. The Hero Fruit Jar Co., Gaul and Adams streets, Philadelphia, manufacture a very complete line of such goods, including a line of patented bottle stoppers, which they recommend for both attractiveness and cheapness. They offer samples and prices to sustain their position.

Menthol Inhalers and Menthol Cones both have their distinctive uses, and people have been in the habit heretofore of spending money for these articles separately. Now that a combination of the two has been effected by Sharp & Dohme, the continued popularity of menthol as a remedy for slight ailments seems to be assured. The new combination is put up attractively in silver-plated cases, illustrations of which are shown on page 16. The price of the article to the retailer is \$2 per dozen net, and lots of people will want them at prices which will afford the dealer a handsome profit.

Hawley & Hoops, 267-271 Mulberry street, New York, want the attention of those druggists who are making or are disposed to make their own chocolate syrup for soda fountain use. Their extract of cocoa, which is sold under the trade-mark "A No. 1," is especially adapted for this purpose, and as it is made from prime cocoa beans it is guaranteed to give satisfaction. It is put up in one and five-pound cans, and a trial of the first size usually results in a purchase of the second. All wholesale druggists handle it.

Attention is directed to the advertisement in this issue of the Valley City Novelty Co. of Grand Rapids, Mich. Their patent pocket fountain pen and pencilholder is one of those handy articles which people buy when their attention is called to them, and the profit on which is such as to give them a good position on the retailers' list of paying specialties. They cost \$1 per dozen, retail at 15 cents, and are handled by jobbers.

The many designs in which prescription bottles are offered to the trade show that considerations of style and beauty can enter into the manufacture of so conventional an article as a medicine bottle. The New Monogram Square offered by the Saltsburg Bottle Works Co., Saltsburg, Pa., indicates that these points were duly considered in designing this attractive container, and in addition great strength and freedom from danger of breakage have been secured by the rounded corners and bottoms. As the prices on these bottles are no higher than for the ordinary kind, there is no risk in seeking satisfactory results through a trial order.

The only reason which would justify a manufacturer in offering to the trade which is apparently well supplied with syringes a new article, would be the fact that the new article possessed some distinct points of superiority. This is eminently the case with the Pri-mo Ladies' Syringe. It is a high-class article constructed upon scientific principles. It is one of the kind which the dealer can recommend, and that the physician will specify after his attention is called to it. It is not a "cheap" instrument in the usual sense of the word, but one which commands a fair price and gives value received for the money expended for it. See advertisement of E. J. Hussey & Co. in this issue.

A PROFITABLE LINE FOR DRUGGISTS.

It is not generally known among the trade that a large business is done by some druggists in selling old postage stamps to collectors. We know of many firms doing a flourishing business in this line, selling large quantities of stamps to collectors each month.

The Standard Stamp Company, 4 Nicholson place, St. Louis, Mo., sends out consignments of stamps to reliable druggists in every city of the United States, and it would pay any who have good stands, especially near a school or college, to handle these goods. There is no expense in giving this a trial, as the firm sends out these consignments on liberal commissions.—Adv.

If you have anything in the way of drug specialties which you wish to introduce to the trade of New York and vicinity, Cushman Bros., 78 Hudson street, New York, can advise you and furnish the best means for establishing a trade. Write them for particulars if you are interested.

The "unspeakable Turk," with all his fallings, still calls for our praise for furnishing us with an idea which we have developed into the luxurious Turkish towel of to-day. Not content with a simple towel, even if it was an excellent one, the Star and Crescent Mills Company of Philadelphia has found fresh uses for this popular fabric, and now we find robes, rugs, slippers, flesh mlts and other accessories of the bath made of the same goods. Many druggists are finding it quite profitable to supply their customers with these articles, and those who are not doing it should investigate the subject. The manufacturers furnish a text book on Turkish Toweling, which can be had for the asking. Better get it.

The selling qualities of different articles are quite variable, but there is no question about those of articles which are made for the pleasure, health and comfort of children. The welfare of the latter is paramount in every family circle, and the druggist who interests the mothers in Arnold's Steam Sterilizers is on the road to success. As the knowledge of the dangers which may lurk in impure milk increases, so does the sale of an article of this sort. Write to Wilmot Castle & Co., Rochester, N. Y., for full particulars regarding the application and operation of this household necessity and figures which will show that the handling of the Arnold is profitable from a business standpoint.

Reliability is one of the great requisites for the success of any luxury depending upon the fickle favor of the public. Metcalf's Sachet Powders have been so long before the public that there must be some truth in the claims for reliability which the manufacturers make. Besides the regular line of odors the firm of Theodore Metcalf Company, Boston, have three trade-marked sachets, which are immensely popular. They are "Forget-Me-Not," "Drop of Dew" and "Boston Orris," and their "shop dress" is just as attractive as their names. See list of jobbers in advertisement in this issue, who handle these goods, and if not already in stock, try a few in your next order to your jobber.

Gilpin, Langdon & Co., Baltimore, have always made very decided statements regarding the superiority of their powders for percolation, but they have always been ready to demonstrate the truth of their assertions at their own expense. Their latest offer is an illustration of this policy. They offer to send sufficient denarcotized opium to make one pint of deodorized tincture opium, assayed, U. S. P., 1890, for 60 cents, or will send sufficient powdered extract nux vomica, assayed, to make one pint of the tincture free of charge. Druggists who have not availed themselves of their offer of metric weights and graduates should write them for particulars. At the same time ask them to inclose you a copy of "A Kueer Kovention." It is quite humorous.

Scherling & Glatz of 55 Maiden lane, New York, have lately issued to the medical profession an attractive pamphlet of eighty pages devoted to the new chemicals for medicinal use manufactured by the Chemische Fabrik auf Actien, formerly E. Scherling, Berlin, Germany. The list embraces a number of new synthetic products, and the work has been arranged to present in a comprehensive manner the chemical character, physiological and therapeutic actions of the various remedies, with brief clinical reports upon the same. The work is especially valuable to pharmacists in view of the growing use by the medical profession of these new remedies, and those of the drug trade who are interested will be furnished a copy upon application.

The pharmaceutical and medical professions are invited to write to A. Vlscher & Co., 7 Warren street, New York, for a monograph upon Ross' Kraftbeer, a peptonized beer, manufactured by L. Ross & Co., Hamburg, Germany, under the advice of the well-known Dr. Friedr. Witte of Rostock. Such eminent German practitioners as Ewald, Mosler, Weber, Braun, Scheel, Jacoby and others, have testified as to the value of this beer in disorders of the digestive organs, general debility, etc. In view of this fact the efforts now being made by the American agents named above, to introduce the preparation to the profession of this country will, undoubtedly, meet with success, and it is in this success that the retail drug trade can share. Sample and prices will be sent upon application.

A great many goods are advertised nowadays by houses who require the money sent in advance so the purchasers are not assured of what they are buying until the goods have been received. The Columbia Carriage & Cycle Company of Milwaukee are adopting a different method in introducing their new wheel, the Wisconsin Light Roadster, as you will find by referring to their "ad" in this issue. They offer to ship their wheel at a price lower than these goods are regularly sold on a wholesale basis, on sixty days' terms, to parties that can furnish satisfactory financial references, or they will ship C. O. D. and allow a discount of 7 1-2 per cent. from the very low price quoted, giving you an opportunity of inspecting the goods before you purchase them.

California wines are coming to the front, and their general excellence has placed them in active competition with the products of foreign countries. As articles of home production which can compete with those which have for years set the standard, they are certainly worthy of the consideration of a trade in which the question of quality and purity is always paramount. The specialties offered by Charles Stern & Sons, 14-16 Vesey street, New York, are especially adapted to all the possible needs of the druggist. For his Beef, Wine and Iron they will furnish him sherry; for his Wine of Cocoa, their Burgundy and Zinfandel; for general medicinal use, their Port, Angelica or Muscatel, while their brandy for druggists' use is put up in kegs at the distillery to meet the requirements of the trade as to quantity.

In planning the Summer fly campaign, do not forget the green Fly Button. These buttons killed lots of flies and pleased lots of dealers and their customers last season and they will do the same this Summer. The five-cent package consists of six thick circular sheets of green poisoned paper 3 1-2 inches in diameter—just the size to fit the bottom of a sauce dish without overhanging points to carry poison to the outer side. They cost 30 cents per dozen. Orders which jobbers cannot fill will be filled by the manufacturers, The Fly Button Co., Maumee, Ohio, who prepay express charges.

There is one feature of the retail drug trade which receives a due share of attention from some, and is almost entirely neglected by others. It is the handling of surgical supplies in sufficient variety to meet the requirements of the medical profession. The convenience of having a supply of such articles near at hand is one which will be greatly appreciated by the majority of physicians, and the matter is one which will bear some careful study on the part of those druggists who have not given it serious thought. As an aid to consideration of the question attention is directed to the advertisement of the J. Ellwood Lee Company, Conshohocken, Pa., in this issue, and a request for the firm's very complete catalogue of surgical goods and druggists' sundries, which they manufacture, will bring the inquirer much valuable information.

The announcement regarding the new poison bottle lately put upon the market by Carlton H. Lee & Co., 117 Pearl street, Boston, has excited considerable inquiry both from the drug trade and the general public. That the latter is interested is shown by the following comment upon the skull-shaped bottle by the Chicago Times: "It is of blue glass, in order that the contents may better resist being affected by light, and it is molded into the shape of a skull, with the crossbones underneath. The word 'poison' is placed in raised letters on the forehead, and at the base of the skull a space has been left for the red label that tells the nature of the drug. The hollow eye sockets, the jaw bones and the teeth would tell its purpose to a blind man, and ghastly as it may seem to those who are blessed with sight, it is better to be frightened than to die."

In this day of almost numberless medicinal preparations, advertising is an important factor in the success of such articles. This fact is recognized by the California Flg Syrup Co., and the success which they are determined to make for themselves during 1894 is one which they are willing to share with the retail drug trade.

George Lueders & Co., 218 Pearl street, New York, in a recent communication say: "We intend in the near future to issue a circular with some very interesting reading matter about Olive Oil. We have lately submitted some of our oils to chemical tests of different leading chemists in this city, and the certificates of analysis are just as amusing as they are interesting. We desire to give some interesting particulars in regard to tests of olive oil, and also to give some incidents which will tend to show how often and how easily olive oil is misjudged. We have on hand now some of Lautier's Olive Oil which is almost five years old, and which we are willing to submit to any interested party to show that it is perfect in taste, and as good as the same oil of two crops back."

Bear this in mind and see that you get a copy.

The Committee of Revision of the U. S. P., 1880, in recognition of the growing excellence of American wines, dropped the old titles "Xericum" and "Portense," substituting therefor the words "album" and "rubrum," thus permitting the use of any wine of a certain standard. This decision was made over fifteen years ago and sufficient time has elapsed to show its wisdom. That American wines are fully up to all requirements is evidenced by the favor which has been accorded to the products of the Hammondsport Wine Company, Hammondsport, N. Y. Their Golden Age champagne is made by the natural process of fermentation in bottles and their Port, Sherry, White Tokay, Madeira, Sauterne, Catawba, Claret, etc., are especial favorites for medicinal use. As the firm pays special attention to the needs of the drug trade, the latter will find it advantageous to return the compliment.

Have you seen the Decoy Fly Paper manufactured by the Detroit Fly Paper Company of Detroit, Mich.? The following points are claimed for its superiority:

1. The sheet is covered with representations of flies, which act as decoys.
2. The sticky mixture is perfect.
3. The border is part of the body of the sheet and cannot chip off and litter up the carpets and furniture. Being heavily embossed, the border also serves as an effective dam beyond which the sticky mixture cannot run, so that the sheet is always clean when in use.
4. The manufacturers guarantee perfect satisfaction, and will replace any spoiled lot, also any which is carried over and is not perfect, thus insuring customers against any possible loss.

Paper is packed 25 double sheets in box, 10 boxes in case. Each case contains a liberal supply of advertising matter, show cards, etc.

The Cornell-Pheneger Chemical Co., Columbus, Ohio, has changed its name to the Columbus Pharmaceutical Co.

Aside from their inherent good qualities, there is a certain charm which invests the products of the Crown Perfumery Company and makes them popular with the public. This arises from two possible sources, one of which must be the excellent taste displayed in putting up the goods, and the other the happy choice of names by which the goods are known. The *malus coronaria* is rare enough to make its extraordinary beauty and fragrance all the more acceptable, and a perfume which bears its name receives all the benefit which comes from the almost romantic associations which surround it. The words "Crab Apple Essences" have been applied to five toilet requisites, all of which are finding a preferred position upon the toilet table of every lady of taste and refinement. The list includes perfume, toilet water, poudre de riz, toilet soaps and sachets, and the demand for these is indicated in figures showing an annual sale of over 500,000 bottles.

Modern methods of communication, while distinctly advantageous in many ways, are important factors in the spread of disease. This has been shown by the wide prevalence of smallpox during a late period. That all danger has not passed is shown by the active measures taken by the authorities in enforcing vaccination. The drug trade can render an important service by assisting in this work. This cannot be done by keeping a stock of virus on hand, but can be done by keeping in mind the names of those from whom a reliable article can be secured in an emergency. Prominent upon such a list is the name of Dr. Francis C. Martin, Roxbury station, Boston, Mass. The name of Martin has been favorably identified with the propagation of vaccine virus ever since the introduction of animal vaccination in America, and the Martin product still maintains the high standard which has always characterized it. See prices and terms in advertisement in this issue.

Every one conversant with the trade of fine whiskies cannot fail to have observed that rye during the past few years have been steadily and universally making headway throughout the country, each day gaining new adherents and extending their popularity. This is doubtless due to the fact that rye whiskies as a class have been presented to the consumers as matured goods made of the very finest and choicest materials, and with the utmost skill and care that knowledge of the business can command. Clarke's Pure Rye is made in the Fall of the year by Clarke Bros., Peoria, Ill., from carefully selected, new, healthy rye, with barely sufficient barley malt to convert the starch into grape sugar, the formula being 80 per cent. pure rye and 20 per cent. barley malt. No corn is used in making this whisky. In offering Clarke's Pure Rye to the public, Colburn, Birks & Co., the sole distributors, challenge comparison with the foremost leaders as to purity, finish, body, maturity and bouquet.

One would think in studying the long list of beverages, food products, etc., already on the market, that the limit of ingenuity in inventing new ones had already been reached. But such is not the case. The Choco-Lactine Manufacturing Company of 49 Dey street, New York, has a new one in Achor's Choco-Lactine which for soda-fountain use, milk punches, milk shakes and various medical and domestic uses has every appearance of a successful article. It is prepared from pure Caracas chocolate, milk and refined sugar, thoroughly cooked and combined by an original process, forming a perfect food, having considerable sedative effect in inflamed conditions of the stomach, relieving nausea, seasickness, etc., and furnishing an excellent nerve and brain food. The phrase "A cup of chocolate in a minute, sugar and milk already in it," which is being used to advertise the preparation, will surely attract the attention of the public. Its use in making a fountain syrup saves both time and money. Write for prices and particulars. A liberal discount is given to the trade.

Considerable interest is being evinced by physicians regarding the tonic stimulant action of Kola, and it is coming to be largely used in cases of nervous exhaustion, as it combines the invigorating properties of caffeine with the stimulating effects of theobromine and Kolanine, which latter peculiar principle is claimed by some investigators to be superior to cocaine as a stimulant, without the enslaving properties of the latter alkaloid. Kola in the form of a fluid extract is acrid and bitter in taste, which renders it unpleasant to administer, and manufacturing pharmacists have long sought for a means of presenting it in palatable form. After long study and experimental investigation Frederick Stearns & Co. of Detroit, Mich., by an original process have at last produced such a preparation—Stearns' Kola Cordial—that is freed from acrid bitterness. It is one-fourth the strength of the fluid extract, and is in the form of a delicious cordial. Messrs. F. Stearns & Co. were the introducers of Kola to the medical and pharmaceutical professions of this country, and refer inquirers to the New Idea of June, 1882, and June, 1883, where the drug was first mentioned. They have now in press an exhaustive treatise on Kola, its history and therapeutic range, which will soon be ready for distribution to pharmacists who are interested in the subject, and they invite correspondence regarding the drug itself, and Stearns' Kola Cordial, samples of which, with full descriptive literature, will be mailed on request. Write them.

THE BEAUTY OF NIAGARA.

Can never be described, and it has never been pictured so adequately and satisfactorily as in the splendid portfolio just issued by the Michigan Central, "The Niagara Falls Route." It contains fifteen large plates from the very best instantaneous photographs, which cannot be bought for as many dollars. All these will be sent for 10 cents by Frank J. Bramhall, Advtg. Agent, Michigan Central, 402 Monadnock Block, Chicago.

The Silurian Mineral Spring Co., of Waukesha, Wis., desire to furnish proof of their statements regarding the merits of their Wild Cherry Phosphate Syrup as a summer beverage. They offer to do this in a very convincing way by sending a sample free to every druggist who owns a soda fountain. Do you own a fountain?

Many druggists will find it to their advantage to buy their fruit juices and flavors in liberal lots at the beginning of the season, and thus effect quite a saving in the discounts which are offered on large quantities. W. H. Schieffelin & Co., New York, will be pleased to quote special prices on bulk and gross lots to all who desire to avail themselves of a liberal discount.

With a tooth powder bottle like the No. 692, improved, advertised by John M. Maris & Co., Philadelphia and New York, costing \$14.40 per gross, less 33 1-3 per cent. discount, there ought to be both satisfaction and profit for the retail druggist in selling his own tooth powder. This bottle is fully described in an advertisement in this issue, but 10 cents will secure sample, which will show just how it works.

It is entirely unnecessary to call the attention of the drug trade to Jayne's Family Medicines, as there are very few localities in this country where the public is not already doing this. There are two, however, Jayne's Carminative Balsam and Sanative Pills, which are always in great demand during the Summer, and the supply should always be equal to the demand.

Students who are interested in histological research will find an instrument especially adapted to the requirements of such work in Zentmayer's Histological Microscope. Full information regarding it will be found in a catalogue issued by the manufacturer, J. Zentmayer, 209 South 11th street, Philadelphia, who will be pleased to send it to all intending purchasers.

The Chicago Aeriform Carbon Co., 49 West Polk street, Chicago, quote prices upon their apparatus which show that their appliances are within the reach of the average druggist. While this feature may be convincing, much more can be learned of the merits of their goods by writing to them for catalogue describing their manufactures. A simple request will bring it.

The attention of the readers of the Era is again called to the very superior quality of Salicylic Acid manufactured by the Herf & Frerichs Chemical Co., in St. Louis. Their make is of extraordinary whiteness, and excels by its great purity and uniform efficiency. All orders will be promptly filled from their works in St. Louis, or their warehouse and office, 96 Fulton street, New York.—Adv.

With a descriptive catalogue in his possession, such as is furnished by R. Boericke & Co., 435-503 Wells street, Chicago, the retail druggist will be in a position to supply the wants of his patrons for nearly everything in the way of mechanical appliances for the alleviation of suffering. The firm's advertisement in this issue shows the very comprehensive line of such goods which they manufacture.

PATENTS, TRADE-MARKS AND DESIGNS.

From U. S. Patent Office Gazette.

PATENTS.

- 519,693—Making Vanillin.—Julius Bertram, Leipsic, Germany.
519,720—Powder Distributor.—Clinton H. Leggett, New York, N. Y.
619,971—Blue Dye.—Jacob Schmid and J. Bachelut, Basle, Switzerland.
519,580—Compound Edible Fat.—Alexander W. Winter, Chicago, Ill.
620,985—Composition for Removing Hair From the Skin.—Jacob Mallinger, Baltimore, Md.
620,912—Process of and Compound for Extinguishing Fires.—Albert C. Schumacher, Ann Arbor, Mich.
520,914—Method of and Apparatus for Preserving Condensed Milk.—Frederick D. Smith, San Francisco, Cal.
520,965—Pocket Package of Toilet-Paper.—Charles L. Houghton, Northampton, assignor of one-half to J. L. Woodruff, Westfield, Mass.
520,120—Galvanic Battery.—Edwin F. Northrup, Ardmore, assignor to Queen & Co., Philadelphia, Pa.

Reissued.

- 7,688—Processes of Manufacturing Malt Extract.—H. R. Randall, Brooklyn, N. Y.

Expired May 15, 1894.

- 199,855—Composition Seals for Bottles and Jars.—C. M. Jacob, Paris, France.

Expired May 22, 1894.

- 199,954—Explosive Compounds.—Otto Burstenbinder, Humboldt, Mich.
199,964—Apparatus for Making Infusions.—Robert C. Etzenberger, London, England.
199,995—Processes for Bleaching Beeswax.—Jomer T. Yaryan, Richmond, Ind.
191,083—Syringe Cases.—B. F. Sutton, Brooklyn, N. Y.
191,093—Bottle Openers.—E. Bacher, Findlay, Ohio.
191,152—Processes of Manufacturing Glue.—C. O. Harrison, New York, N. Y.
191,298—Continuous Distillation and Apparatus Therefor.—S. Van Syckel, Titusville, Pa.

TRADE MARKS.

- 24,625—Medicated Wine.—W. C. Bevan & Co., Malaga, Spain. The words "Vino de Salud" (Wine of Health).
24,625—Liquid Compound of Celery Seed and Fluid Extract of Sarsaparilla.—Kings Medicine Company, Pittsburg, Pa. The capital letter "B" having the words "Celery & Sarsaparilla Compound" inclosed by and following its outlines with a bull's head protruding from the upper loop of the letter and a bunch of celery from the lower one.
24,628—Remedy for Kidney, Liver & Other Diseases.—Horatio N. Spaulding, Vandalla, Ill. The letters and character, "S. K. & L. V.," the "S" being several times larger than "K," "L," and "V.," with "K" and "V." appearing in its curves, and the character "&" at its right and "L" at its left centrally and all inclosed by a circle.
24,629—Nervine, Tonic, Restorative and Reparative Remedy.—John H. Winklemann, Baltimore, Md. The word "Coccolin."
24,630—Medicine for the Cure of Catarrh.—

- Hoot-Tea Na Herb Co., Akron, Ohio. The words "Red Lion," and the representation of a lion, the attitude of which indicates that he is in quest of prey.
24,631—Medicated Soaps and Plasters and Remedies for the Diseases of the Blood, Skin and Nerves.—Edgar F. Hanson Belfast, Me. The word "Nutriola."
24,632—Liquid Detergent.—Valentine Bellikan, Detroit, Minn. The word "Banner."
24,633—Disinfectants.—Reall, Holliday & Sons, Limited, New York, N. Y. The word "Micromort."
24,640—Dentifrice.—Luis J. de Carballo, New York, N. Y. The word "Eulalia."
24,641—Tonic Medicine.—Anheuser-Busch Brewing Association, St. Louis, Mo. A blue colored band extending diagonally across the label and bearing the words "Columbian Malt Tonic."
24,643—Lactyl Derivatives of Paraphenol.—C. F. Boehringer & Sohne, Waldhof, near Mannheim, Germany.—The word "Lactophenia."
24,644—Remedy for Headache and Neuralgia.—Robert Black, Brooklyn; N. Y. The word "Headline."
24,650—Disinfectants.—Reall, Holliday & Sons, Limited, New York, N. Y. The word "Germol."
24,651—Medicine for Certain Named Diseases.—Peter Petree & Co., near Huntsville, Tex. A circle with the words "Petree's Panacea" following its outline at the top, and "King of Discoveries" its outline on the lower side, with "Or" in its centre.
24,656—Chewing Gum.—The Cleveland Gum Company, Cleveland, Ohio. A portrait of Dr. Brockway, and the words "Dr. Brockway's Acid Phosphate Chewing Gum."
24,656—Certain Named Remedies.—The Dr. Chase Co., Philadelphia, Pa. The words, "Dr. Chase's Blood and Nerve Food."
24,657—Anestho-Anodynes.—Gary & Christopher, Baltimore, Md. The abbreviation and words, "Dr. Jakes Pain Killer," with the letter "K" of the word "Jakes" larger than the other letters, and projecting below and serving as the initial letter of the word "Killer."
24,658—Cod Liver Oil and Preparations Thereof.—The T. A. Slocum Company, New York, N. Y. The words "Slocum's Ozonized Norwegian Cod Liver Oil" superimposed upon the representation of a fish.
24,659—Capsules, Pills and Medicated Jubes.—Warrick Brothers, London, England. The word "Jellodis."
24,660—Nerve Tonic.—Erving L. Eastman, Peabody, Mass. The representation of an ornamental scroll supported by sprays of balsomy blossoms and heads of celery seed.
24,661—Liniment.—Anna W. Wallace, Allegheny, Pa. The word "Four-Fold," and the representation of a bee hive.
24,662—Salves, Ointments, Liniments and Powders.—Clarence Foster, Baltimore, Md. The words "German Army and Navy."
24,663—Ointment.—Thomas Guinean, Seattle, Wash. The representation of a cherub with extended wings, seated upon a bank of clouds and holding a bottle in his hand.
24,677—Flavoring Extracts for Culinary Purposes.—Big Wheel Company, Wheeling, W. Va. The words "Big Wheel."

MARKETS.

A COMPLETE PRICES CURRENT, covering all staples, drugs, chemicals, etc., usually purchased by retail druggists, will be found on page 45 of this issue, in the back part of the journal.

A.oes, Curacao.	Saffron.
Orris Root.	Sodium, salicylate.
Oil Citronella.	Oil Peppermint, H. G. H.

New York, June 9, 1894.

With the exception of a fair average movement of the more seasonable articles in the drug section of the general commercial markets, there has been no semblance of activity during the past fortnight, and the same influences noted in recent issues still control the situation. Buyers adhere closely to the hand-to-mouth policy, rarely purchasing in excess of immediate or near-by requirements, and the result is that business has continued to be chiefly of a jobbing character. The drug market does not differ materially from other merchandise markets, and efforts to ascertain the principal cause of the general business depression have brought forth expressions of opinion from representative men in the various branches. All seem to agree that the annoying and vexatious tariff question is in the main responsible, and until it is finally disposed of the present condition of suspense will probably continue. Meanwhile speculation will undoubtedly remain dormant, and trading will be restricted to the legitimate wants of consumers. Since our last report several radical changes have occurred in values, but none are directly traceable to the prevailing stagnation, and nearly all the recorded declines are due to causes entirely foreign to the quiet situation. In fact, the tone of the market may consistently be characterized as steady, and there is no disposition shown by holders to force business through the medium of concessions. In some instances lower prices have been named for the purpose of closing out old-crop goods to make way for new, but, generally speaking, there are very few commodities not available at prices below those at which stocks could be replaced; hence, there is little, if any, inducement to urge goods upon reluctant buyers. Nothing has occurred to disturb the financial condition of affairs, and the outlook continues satisfactory.

OPIMUM—Has continued to decline, and the market seems to have reached a condition akin to demoralization. Values have receded until single cases have been sold at \$1.95 and broken lots at \$2@32.05, according to size of order. Stocks are comparatively large, the demand slow, the crop outlook favorable to a liberal yield, and foreign markets continue depressed, but, notwithstanding these adverse influences, some of the larger hold-

ers are still sanguine of improved conditions, and base their hopes chiefly on the probability that when the proposed tariff bill becomes operative it will have opium among the dutiable articles.

POWDERED OPIUM—Continues to droop in sympathy with the gum, and values show a further loss of 10 cents per pound. The demand is light and wholly for small jobbing quantities.

MORPHINE—There is no quotable change in manufacturers' prices, but the continued weakness in opium has a depressing influence, and consumers operate cautiously in view of a probable further decline.

QUININE—Has not developed any new feature of more than ordinary interest, and general business has been of only moderate volume, with the market retaining a steady tone and transactions showing the previous range of values. Stocks in second hands are still sufficient to meet consumers' requirements, but they are gradually diminishing, and all indications are favorable to continued steadiness.

ARSENIC—Saxony red shows a fractional decline, but white is steady, and the market for all varieties remains quiet.

BALSAM COPAIBA—A continued firm feeling is manifest on the part of holders, and there is a fair degree of jobbing activity, with Central American receiving the larger share of attention. Efforts are being made to have all purchases tested for the purpose of discovering adulterants, as it is claimed that the stock of strictly pure is very light and closely concentrated in few hands.

BALSAM FIR—Is dull, weak and lower, with quotations showing a further decline of 25 cents per pound, without stimulating activity. The former large consumers have practically abandoned the use of this article, having substituted Venice turpentine, which is obtainable at a comparatively much lower cost, and is equally efficacious. As a consequence, consumption is materially lessened, and, with the coming crop likely to be unusually large, the trend of values is toward a still lower basis.

BALSAM PERU—The recent advance having checked the demand, holders have modified their views, and quotations have been reduced to the former range, with a subsequent improvement in the volume of business.

BALSAM TOLU—Has been moving moderately in small lots for current consumption at unchanged values.

COD LIVER OIL—The easy feeling noted in our last issue has been eliminated, and the tone of the market is again firm, mainly in sympathy with stronger advices from primary sources of supply, where the principal refiners have advanced their views and offer indifferently. The demand for consumption has been fairly active for all desirable qualities, and leading brands are held at full figures.

CHICLE—Has developed increased activity, and liberal purchases have been made from lots in first hands at advancing prices. The balance of the stock is limited at figures above buyers' views, but it is all in strong hands, and with the statistical position well known, it is not improbable that the figures demanded will be realized when it becomes nec-

24,718—Caustic Soda.—The Northumbrian Chemical Company, Limited, Newcastle-on-Tyne, England. The representation of a lion statant.

24,720—Toilet Preparation.—Delbert E. Prall, Saginaw, Eastside, Mich. The word "Dorothy."

24,721—Complexion Powder.—Emma J. Wormley, Des Moines, Iowa. The word "Psyche" and the figure of a woman representing the said goddess.

24,722—Pharmaceutical Products.—Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany. The word "Lyceol."

24,723—Medicinal Tablets.—The Antikamnia Chemical Company, St. Louis, Mo. The letters "A. K."

24,724—Medicinal Tablets.—J. Miller Cramp-ton, New York, N. Y. The word "Home."

24,725—Medicine for the Cure of the Tobacco Habit.—Root-Tea-Na Herb Co., Akron, Ohio. The words "Double Shot" and the representation of two cannons placed breech to breech, from which flame and smoke are issuing.

24,726—Certain Named Remedies.—Joseph F. O'Hern, Waltham, Mass. A representation of the heads of four persons in a horizontal row upon a black panel.

24,727—Medicines for Venereal Diseases.—John F. Gilman, Boston, Mass. The words "Sub Rosa."

24,728—Chewing Gum.—Faultless Chemical Company, Baltimore, Md. The word "Chips."

24,729—Hair Grower.—Lyman C. Olds, Baltimore, Md. A portrait of the registrant.

24,730—Preparation to Prevent Seasickness.—Richard Hudnut, New York, N. Y. The word "Marini."

24,731—Condition Powders.—William G. Tishman, Palatka, Fla. The words "Salt Sick."

24,732—Balsams and Ointment.—The Clover Medicine Company, Augusta, Me. The representation of a four-leaf clover and the word "Clover."

24,733—Cough Syrups.—Bruno H. Goll, Chicago, Ill. The word and figures "Article 47."

24,734—Remedy for the Blood.—Bruno H. Goll, Chicago, Ill. A portrait of the registrant.

24,735—Remedies for Purifying and Treating the Blood.—McKesson & Robbins, New York, N. Y. The word "Rochelle-lithine."

24,736—Remedies for Diseases of the Blood.—McKesson & Robbins, New York, N. Y. The word "Tartaralithine."

W. H. Thomas & Son, Louisville, Ky., have made an assignment to the Louisville Trust Company.

The Freeman-Rice Medicine Company, Portland, Me., have failed. It is stated that their liabilities are \$4,500, with assets of but \$932.

The William H. Kiusmann Company, Limited, Los Angeles, Cal., have succeeded William H. Kiusmann & Co. Their offices, formerly at 110 Centre street, have been moved to 369 South Spring street.

The Bartlett Drug Company has opened an office at 235 Washington st., Boston, Mass., where they will carry on the business of drug brokers and manufacturers' agents. They solicit agencies for any specialties relating to the drug trade.

essary for consumers to replenish their supplies.

CODEINE—Manufacturers' quotations show a general reduction of 10 cents per oz. on all sized packages.

CHLORAL HYDRATE—Shows a materially lower range of prices, owing to a change in the rate of duty exacted by the Government appraisers, who formerly classified the article among alcoholic preparations, and required importers to pay a duty of 50 cents per pound. They have since modified their ideas, and now require only an ad valorem duty of 25 per cent. Hence a reduction of about 30 cents per pound.

BENZOIC ACID—The German article in one-pound packages is scarce and higher, quotations showing an advance of 10¢ cents.

SALICYLIC ACID—Values have been reduced 15¢20 cents per pound here, and about 30 per cent. in Europe, the decline being attributed to efforts of manufacturers to force new competitors to make terms or retire from the business. Current quotations are \$1.07 for one-pound boxes \$1.12 for halves, and \$1.17 for quarters, packages inclusive.

MURIATE COCAINE—Is unsettled and materially lower, the revised quotations showing a decline of fully 70 cents per ounce. But one or two holders are not meeting the reduction, claiming that the new prices are below cost of production. Ounce vials are obtainable at \$4.75, halves \$4.50, quarters \$4.85 and eighths \$4.95.

SALOL—Is in a similar position to that of Salicylic Acid. The combination of manufacturers have met with fresh competition, and in order to force an issue have made a reduction of 75 cents per pound on all the various styles of packages.

MENTHOL—Is held firmly at the recent advance, and, with foreign markets hardening, still higher prices are anticipated.

SAFFRON—A continued fair jobbing business is in progress, but the near approach of new crop influences a weak feeling, and the principal holders have again reduced prices 10 cents per pound, and a further decline is among the near probabilities.

SARSAPARILLA—Is again slightly higher, with the tone of the market strong, and available stocks are under good control. Business in a jobbing way shows fairly liberal proportions.

CELERY SEED—Is unsettled and irregular, with quotations showing a comparatively wide range. A few parcels recently taken by outside speculators have been offering at concessions for the purpose of realizing (the anticipated advance not having materialized), and the consequence is a depressed market. On the other hand the principal holders decline to meet the cut in prices and are evidently of opinion that the condition of the market will improve, as the new crop is not likely to arrive in time to meet the early demand from consumers.

GUM KINO—Shows increasing scarcity, and prices have again been advanced 10 cents per lb.

LAUREL LEAVES—Are fractionally higher, in sympathy with primary markets.

MURIATE OF AMMONIA—Cable advices report an advance in primary mar-

kets, and, with white grain scarce on the spot, values are slightly higher and firm.

SPONGES—All indications are favorable to higher values. The old crop of all varieties is practically exhausted, and the new crop promises to be unusually small, both of domestic and foreign. The first arrival of new Florida at the primary market was only a limited quantity and occasioned active competition between buyers, which resulted in prices being marked up fully 33 per lb. Advances from European markets report increased scarcity there also, with a 10 per cent. advance in values.

ALOES—Cape and Curacao have been fairly active for consumption, but there is no change in values of the former. The latter, however, show increasing firmness, particularly for round lots, which are held fully 1-2 cent above jobbing prices.

JALAP—The tone of the market is improving, and supplies are held with a greater degree of confidence. Several parcels in first hands have been taken by dealers, and there is a fair consuming outlet for desirable qualities.

SALICYLATE OF SODIUM—Manufacturers have reduced prices 10 cents on pound packages and 1-2 cent on ounces. The latter are now quoted 8 cents, vials extra, and 10 cents, cartons included.

ORRIS ROOT—A liberal business in Verona varieties has resulted in concentrating stocks more closely, and a consequent hardening of prices, all quotations being about 1 cent per lb. higher.

OIL CITRONELLA—Is unusually scarce and, with the demand from consumers active, values are firm at an advance of 1 cent per lb.

CACAO BUTTER—Is easier abroad, and supplies here are available at slightly lower figures.

OIL PEPPERMINT—H. G. H. is in better supply and lower, with jobbing sales showing a decline in values of 5 a 10 cents.

BRAZIL WAX—Arrivals have been unusually heavy, and further shipments are said to be on the way. The result is a weak and sagging market.

MAGAZINES.

The following is a brief mention of the important features of the June magazines:

The North American Review devotes considerable space to the absorbing question of the day, and under the head of "The Menace of Coxeyism," three papers are presented, by Major-General O. O. Howard, Thomas Byrnes, Superintendent of Police, New York, and Dr. A. H. Doxy, Chief of the Bureau of Contagious Diseases, who each treats the subject from his respective standpoint. Secretary of Agriculture Morton also refers to the same matter incidentally in his article on "Protection and the Proletariat." Other political matters are brought to notice by articles from Sir E. Ashmead Bartlett on "The Political Outlook in England;" Prince Urbielde on "Mexico Under President Diaz;" Edward Stanwood on "How to Relieve Congress," and M. G. Mulhall on "Continental Finances." Other

articles of more than ordinary interest are "Fashion and Intellect," by W. H. Mallock; "The New York State University," by Bishop Doane; "The Modern Girl," by Sarah Grand; "The Cry of the Women," by Elizabeth Bisland; "Our Family Skeleton," by John F. Hume; "The Problem of the Racing Yacht," by George A. Stewart; "What Should a Doctor Be Paid?" by Dr. W. A. Hammond.

The Century has for its frontispiece a portrait of Kossuth in 1851, and, in connection with the lately revived interest in the great Hungarian patriot, presents a paper by W. J. Stillman, entitled "On a Mission for Kossuth." Among the notable articles are "The Government of German Cities," by Albert Shaw; "The Consular Service and the Spoils System," a series of articles by eleven ex-Ministers of the United States; "The Ascent of Mount Ararat," being the second paper in the series "Across Asia on a Bicycle;" "A Cumberland Vendetta," by John Fox, Jr.; "Field Notes," by John Burroughs; "The Loosened Cord," by A. W. Drake; "Edison's Invention of the Kinetograph," by Antonia and W. K. L. Dickson; "A Loan of Half-Orphans," by Thomas A. Janvier; "Old Dutch Masters: Adriaan Van Ostade," by Timothy Cole; "Tissot's Illustrations of the Gospel," by Theodore Stanton; "The Mother of Ivan Tourgenieff," by Hjalmar Hjorth Boyesen; "Bookbindings of the Present," by Brander Matthews; "The Magic Egg," by Frank R. Stockton, and the conclusion of "Pudd'nhead Wilson," by Mark Twain.

Lippincott's has for its complete novel a romance of Virginia entitled, "The Wonder-Witch," by M. G. McClelland. "Sea Island Cotton Respun," by Dora E. W. Spratt, is a sketch of the manners and customs of the inhabitants of the Islands of that name during the civil war. "The Passing of the Essay" is the title of an article by Agnes Repplier, which, as might be expected, contains much proof that the day of the "essay" is not past. The new mail route from London to Yokohama via the Canadian Pacific and New York Central railways forms an interesting theme which J. Macdonald Oxley has enlarged upon in an article entitled, "The New Northwest Passage to the Orient." Richard Henry Stoddard, in "My First Literary Acquaintances," tells of the beginning of a career which is the admiration of all lovers of good literature. Anna Fuller relates a case of righteous homicide in "The Rumpety Case." E. Gordon Hays furnishes a sketch of lowest New York life in "Two in the 'Other Half,'" and Morgan S. Edmunds describes pioneer life in the Argentine in his sketch entitled "Hot Work on the Pampas."

You may not be able to sell as many of the "Whiting" brushes as you can of an inferior kind, but you will have more customers, because the brushes give good satisfaction and do not wear out quickly. This is the season when brushes are in demand, and the above point should be remembered when such goods are ordered.

A young man who wished to purchase a bicycle upon the "insolvent plan" bulled better than he knew when he so constructed his request.
